

easyPOCKET

The tiny lens with powerful magnification

Nuremberg – the ultra-slim, illuminated pocket magnifier easyPOCKET is *the* practical vision aid when you're on the move. Particularly people who are visually impaired recognise the benefits of using this slide-out magnifier in a credit card format. And thanks to its innovative illumination concept, this handy pocket magnifier guarantees optimum viewing comfort even in poor light conditions.

easyPOCKET has been specially developed by Eschenbach Optik as a small yet powerful pocket magnifier, which is ideal for when you're on the move. Always handy, but never in the way, easyPOCKET measures only 86 x 54 x 6 mm and weighs in at only 31 grams - making it the ideal size for any pocket. Its high quality diffractive/aspheric lens has a thickness of only 3 mm and it offers 3x or 4x magnification, as well as an excellent image quality - making it your ideal companion wherever you are.

A powerful SMD LED light always provides optimum illumination of the object being viewed. When you slide the magnifier out of its protective case, the light automatically goes on. What's more, the energy-saving LED never needs to be changed as it has a virtually unlimited service life. The case is made from glass fibre reinforced plastic and protects the lens from damage when it is in the

retracted state. At the same time, its elegant design makes easyPOCKET a sleek and stylish accessory.

In summary

easyPOCKET from Eschenbach Optik is a high quality and handy illuminated pocket magnifier in a credit card format, which provides magnification with optimum illumination even in poor light conditions.
