

SWITCH BOXES

Manual Switch Boxes

The SB range of Switch Boxes are computer-sharing devices that allows multiple users to share one peripheral or one user to share two or 4 peripherals. Based on manual switching principle, it's as easy as selecting the required letter your device is on.

These devices are a perfect solution for a small office environment where a peripheral can be shared between two or 4 users without the trouble of a network. There is no interface card or software to configure. Installation is as easy as connecting cables between the switch and your computers.

- Manual Selection
- Operating system independent
- Transparent to all applications
- Power-free operation
- No Software required
- Bi-Directional
