Block Diagram

Description

The 55505 is a robust flange mounting hall effect sensor primarily for geartooth speed sensing. Protected against severe and automotive environments. It is capable of switching up to 27Vdc and 20mA and available as three-wire (voltage output) version. It's case design incorporates brass mounting bush. It is ideally suited to wheel, transmission and camshaft speed sensing, geartooth sensor, rotary encoders, industrial, commercial, and automotive applications.

Features

- Ferrous target speed sensing
- Internal circuit protection
- Protection against severe and automotive environments
- Self adjusting magnetic range
- Automotive grade circuit protection
- High speed operation
- Short circuit and reverse voltage protection
- On board 10-bit A/D convertor

Benefits

- No chopper delay
- Immune to target run out
- Rotational alignment to target not critical

Applications

- Wheel, transmission and camshaft speed sensing
- Geartooth sensor
- Rotary encoders
- Industrial
- Commercial
- Automotive
