#### 74LCX16240

# Low Voltage 16-Bit Inverting Buffer/Line Driver with 5V Tolerant Inputs and Outputs

#### **General Description**

The LCX16240 contains sixteen inverting buffers with 3-STATE outputs designed to be employed as a memory and address driver, clock driver, or bus-oriented transmitter/receiver. The device is nibble controlled. Each nibble has separate 3-STATE control inputs which can be shorted together for full 16-bit operation.

The LCX16240 is designed for low voltage (2.5V or 3.3V)  $V_{CC}$  applications with capacity of interfacing to a 5V signal environment

The LCX16240 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power dissipation.

#### **Features**

- 5V tolerant inputs and outputs
- $\blacksquare$  2.3V to 3.6V  $\rm V_{CC}$  specifications provided
- $\blacksquare$  4.5 ns  $t_{PD}$  max (V  $_{CC}$  = 3.3V), 20  $\mu A$   $I_{CC}$  max
- Power down high impedance inputs and outputs
- Supports live insertion/withdrawal (Note 1)
- ±24 mA output drive (V<sub>CC</sub> = 3.0V)
- Implements proprietary noise/EMI reduction circuitry
- Latch-up performance exceeds 500 mA
- ESD performance:

Human body model > 2000V

Machine model > 200V

Note 1: To ensure the high-impedance state during power up or down,  $\overline{\text{OE}}$  should be tied to  $V_{CC}$  through a pull-up resistor: the minimum value or the resistor is determined by the current-sourcing capability of the driver.

#### **Functional Description**

The LCX16240 contains sixteen inverting buffers with 3-STATE standard outputs. The device is nibble (4 bits) controlled with each nibble functioning identically, but independent of the other. The control pins may be shorted together to obtain full 16-bit operation. The 3-STATE outputs are controlled by an Output Enable  $(\overline{\mbox{OE}}_n)$  input for each nibble. When  $\overline{OE}_n$  is LOW, the outputs are in 2-state mode. When  $\overline{\rm OE}_{\rm n}$  is HIGH, the outputs are in the high impedance mode, but this does not interfere with entering new data into the inputs.
