

74LVC1G10

Single 3-input NAND gate

Rev. 5 — 28 November 2016

Product data sheet

1. General description

The 74LVC1G10 provides a low-power, low-voltage single 3-input NAND gate.

The inputs can be driven from either 3.3 V or 5 V devices. This feature allows the use of this device in a mixed 3.3 V and 5 V environment.

Schmitt trigger action at all inputs makes the circuit tolerant to slower input rise and fall time.

This device is fully specified for partial power-down applications using I_{OFF} .

The I_{OFF} circuitry disables the output, preventing the damaging backflow current through the device when it is powered down.
