

BESC Programming Card

Product ID 85000

Overview

This device plugs in between your remote control receiver and the speed controller on your ELEV-8 quadcopter or remote control aircraft. It allows the you to program the ESC (electronic speed controller) according to a series of LED indicators. There are buttons at the bottom to help you navigate through the menu and select the feature you want, change it, then press the save button. It's very

simple and is much easier than listening to jingles or a series of beeps. It also gives you the assurance that the settings you have changed are correct and saved into the ESC.

Key Features:

- Simplifies programming of your electronic speed controller for your ELEV-8 quadcopter, model aircraft, multi-rotor aircraft and Unmanned Aerial Vehicles (UAV)
Compatible with all Hobbywing, Thunderpower, Turnigy and OEMRC Sentillion Speed Controllers
