

FEATURES

Tiny, 3.35 mm × 2.50 mm × 0.88 mm surface-mount package
Omnidirectional response
Very high SNR of 65 dBA
Sensitivity of -38 dBV
Extended frequency response from 100 Hz to 20 kHz
Low current consumption: 180 μ A
Single-ended analog output
120 dB maximum SPL
High PSR of 70 dBV
Compatible with Sn/Pb and Pb-free solder processes
RoHS/WEEE compliant

APPLICATIONS

Smartphones and feature phones
Tablet computers
Teleconferencing systems
Digital still and video cameras
Bluetooth headsets
Notebook PCs
Security and surveillance

GENERAL DESCRIPTION

The **ADMP504**¹ is a high performance, very low noise, low power, analog output, bottom-ported omnidirectional MEMS microphone. The **ADMP504** consists of a MEMS microphone element, an impedance converter and an output amplifier. The **ADMP504** sensitivity specification makes it an excellent choice for both near field and far field applications. The **ADMP504** is function- and pin-compatible with the **ADMP404** microphone, providing an easy upgrade path.

The **ADMP504** has very high SNR and extended wideband frequency response, resulting in natural sound with high

intelligibility. Low current consumption enables long battery life for portable applications. The **ADMP504** complies with the TIA-920 *Telecommunications Telephone Terminal Equipment Transmission Requirements for Wideband Digital Wireline Telephones* standard.

The **ADMP504** is available in an ultraminiature 3.35 mm × 2.5 mm × 0.88 mm surface-mount package. It is reflow solder compatible with no sensitivity degradation. The **ADMP504** is halide free.

SUGGESTED COMPANION PRODUCTS

Recommended Audio Codecs for the ADMP504

- For a low power SigmaDSP codec with headphone driver and PLL, we recommend the [ADAU1761](#).
- For a low power SigmaDSP codec with mono speaker driver and PLL, we recommend the [ADAU1781](#).
- For a low power, 24-bit audio codec with headphone driver and PLL, we recommend the [ADAU1361](#).
- For a low power, 24-bit audio codec with a fixed-function tunable signal processor, we recommend the [ADAU1381](#).
- For a low power, multi-channel, 24-bit audio codec in a wafer level chip scale package, we recommend the [ADAU1373](#).
- For a low power, stereo codec with mono microphone input, we recommend the [SSM2603](#).

Recommended Microphone Preamplifiers for the ADMP504

- For low noise, variable compression and noise gating, we recommend the [SSM2166](#) or the [SSM2167](#).
- For low power, ultralow noise, low distortion, we recommend the [ADA4075-2](#) dual opamp.

SPECIFICATIONS

$T_A = 25^\circ\text{C}$, $V_{DD} = 1.8\text{ V}$, unless otherwise noted. All minimum and maximum specifications are guaranteed. Typical specifications are not guaranteed.

Table 1.

Parameter	Symbol	Test Conditions/Comments	Min	Typ	Max	Unit
PERFORMANCE						
Directionality				Omni		
Sensitivity		1 kHz, 94 dB SPL	−41	−38	−35	dBV
Signal-to-Noise Ratio	SNR	20 Hz to 20 kHz, A-weighted		65		dBA
Equivalent Input Noise	EIN	20 Hz to 20 kHz, A-weighted		29		dBA SPL
Dynamic Range		Derived from EIN and maximum acoustic input		91		dB
Frequency Response ¹		Low frequency −3 dB point		100		Hz
		High frequency −3 dB point		>20		kHz
Total Harmonic Distortion	THD	104 dB SPL			3	%
Power Supply Rejection	PSR	217 Hz, 100 mV p-p square wave superimposed on $V_{DD} = 1.8\text{ V}$		−70		dBV
Maximum Acoustic Input		Peak, 10% THD		120		dB SPL
POWER SUPPLY						
Supply Voltage	V_{DD}		1.6		3.3	V
Supply Current	I_S	$V_{DD} = 1.8\text{ V}$		180	200	μA
		$V_{DD} = 3.3\text{ V}$		200	225	μA
OUTPUT CHARACTERISTICS						
Output Impedance	Z_{OUT}			200		Ω
Output DC Offset				0.8		V
Output Current Limit				90		μA
Maximum Output Voltage		120 dB SPL input, peak		0.25		V
Noise Floor		20 Hz to 20 kHz, A-weighted, rms		−103		dBV

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
Supply Voltage	−0.3 V to +3.6 V
Sound Pressure Level (SPL)	160 dB
Mechanical Shock	10,000 g
Vibration	Per MIL-STD-883 Method 2007, Test Condition B
Temperature Range	−40°C to +85°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

TYPICAL PERFORMANCE CHARACTERISTICS

Figure 5. Frequency Response Mask

Figure 7. Typical Frequency Response (Measured)

Figure 6. Typical Power Supply Rejection vs. Frequency

APPLICATIONS INFORMATION

The **ADMP504** output can be connected to a dedicated codec microphone input (see Figure 8) or to a high input impedance gain stage (see Figure 9). A 0.1 μF ceramic capacitor placed close to the **ADMP504** supply pin is used for testing and is recommended to adequately decouple the microphone from noise on the power supply. A dc-blocking capacitor is required at the output of the microphone. This capacitor creates a high-pass filter with a corner frequency at

$$f_c = 1/(2\pi \times C \times R)$$

where R is the codec's input impedance.

A minimum value of 2.2 μF is recommended in Figure 8 because the input impedance of the **ADAU1361/ADAU1761** can be as low as 2 k Ω at its highest PGA gain setting, which would result in a high-pass filter corner frequency at about 37 Hz.

Figure 9 shows the **ADMP504** connected to an **ADA4897-1** op amp configured as a noninverting preamplifier.

Figure 8. **ADMP504** Connected to the Analog Devices **ADAU1761** or **ADAU1361** Codec

Figure 9. **ADMP504** Connected to the **ADA4897-1** Op Amp

HANDLING INSTRUCTIONS

PICK-AND-PLACE EQUIPMENT

The MEMS microphone can be handled using standard pick-and-place and chip shooting equipment. Take care to avoid damage to the MEMS microphone structure as follows:

- Use a standard pickup tool to handle the microphone. Because the microphone hole is on the bottom of the package, the pickup tool can make contact with any part of the lid surface.
- Use care during pick-and-place to ensure that no high shock events above 10 kg are experienced because this may cause damage to the microphone.
- Do not pick up the microphone with a vacuum tool that makes contact with the bottom side of the microphone. Do not pull air out or blow air into the microphone port.
- Do not use excessive force to place the microphone on the PCB.

REFLOW SOLDER

For best results, the soldering profile should be in accordance with the recommendations of the manufacturer of the solder paste used to attach the MEMS microphone to the PCB. It is recommended that the solder reflow profile not exceed the limit conditions specified in Figure 3 and Table 3.

BOARD WASH

When washing the PCB, ensure that water does not make contact with the microphone port. Blow-off procedures and ultrasonic cleaning must not be used.

OBSOLETE

PCB LAND PATTERN LAYOUT

The recommended PCB land pattern for the [ADMP504](#) should be laid out to a 1:1 ratio to the solder pads on the microphone package, as shown in Figure 10. Take care to avoid applying solder paste to the sound hole in the PCB. A suggested solder

paste stencil pattern layout is shown in Figure 11. The diameter of the sound hole in the PCB should be larger than the diameter of the sound port of the microphone. A minimum diameter of 0.5 mm is recommended.

Figure 10. PCB Land Pattern Layout

Figure 11. Suggested Solder Paste Stencil Pattern Layout

RELIABILITY SPECIFICATIONS

The microphone sensitivity after stress must deviate by no more than 3 dB from the initial value.

Table 5.

Stress Test	Description
Low Temperature Operating Life	–40°C, 1000 hrs, powered
High Temperature Operating Life	+125°C, 1000 hrs, powered
Temperature Humidity Bias (THB)	+85°C/+85% relative humidity (RH), 1000 hrs, powered
Temperature Cycle	–40°C/+125°C, one cycle per hour, 1000 cycles
High Temperature Storage	+150°C, 1000 hrs
Low Temperature Storage	–40°C, 1000 hrs
