

AMMP-6222

7 to 21 GHz GaAs High Linearity LNA in SMT Package

Data Sheet

Description

Avago Technologies' AMMP-6222 is an easy-to-use broadband, high gain, high linearity Low Noise Amplifier in a surface mount package. The wide band and unconditionally stable performance makes this MMIC ideal as a primary or sub-sequential low noise block or a transmitter or LO driver. The MMIC has 3 gain stages and a selectable pin to switch between low and high current, corresponding with low and high output power and linearity. In the high current, high output power state, it requires a 4V, 120mA supply. In the low current, low output power state, the supply is reduced to 4V, 95mA. Since this MMIC covers several bands, it can reduce part inventory and increase volume purchase options. The MMIC is fabricated using PHEMT technology. The surface mount package eliminates the need of "chip & wire" assembly for lower cost. This MMIC is fully SMT compatible with backside grounding and I/Os.

Package Diagram

Note:

1. This MMIC uses depletion mode PHEMT devices.

Features

- Surface Mount Package, 5.0 x 5.0 x 1.25 mm
- Single Positive Bias Pin
- Selectable Output Power / Linearity
- No Negative Gate Bias

Specifications (Vdd = 4.0V, Idd = 120mA)

- RF Frequencies: 7 - 21 GHz
- High Output IP3: 29dBm
- High Small-Signal Gain: 24dB
- Typical Noise Figure: 2.3dB
- Input, Output Match: -10dB

Applications

- Microwave Radio systems
- Satellite VSAT, DBS Up/Down Link
- LMDS & Pt-Pt mmW Long Haul
- Broadband Wireless Access (including 802.16 and 802.20 WiMax)
- WLL and MMDS loops

Package base: GND

Attention: Observe precautions for handling electrostatic sensitive devices.

ESD Machine Model (Class A) = 60V

ESD Human Body Model (Class 0) = 150V

Refer to Avago Application Note A004R:

Electrostatic Discharge, Damage and Control.

Note: MSL Rating = Level 2A

Electrical Specifications

1. Small/Large -signal data measured in a fully de-embedded test fixture form TA = 25°C.
2. Pre-assembly into package performance verified 100% on-wafer per AMMC-6222 published specifications.
3. This final package part performance is verified by a functional test correlated to actual performance at one or more frequencies.
4. Specifications are derived from measurements in a 50 Ω test environment. Aspects of the amplifier performance may be improved over a more narrow bandwidth by application of additional conjugate, linearity, or low noise (Γ_{opt}) matching.
5. All tested parameters guaranteed with measurement accuracy +/-0.5dB for gain and +/-0.3dB for NF in the high output power configuration.

Table 1. RF Electrical Characteristics

TA=25°C, Id=120mA, Vd=4.0V, Zo=50 Ω

Parameter	High Output Power Configuration			Lower Output Power Configuration			Unit	Comment
	Min	Typical	Max	Min	Typical	Max		
Drain Current, Id		120			95		mA	
Small Signal Gain, Gain	19	24			23		dB	Test frequency = 8, 14, 18 GHz
Noise Figure into 50 Ω , NF		2.3	3.5		2.3		dB	Test frequency = 8, 14, 18 GHz
Output Power at 1dB Gain Compression, P1dB		15.5			14		dBm	
Output Power at 3dB Gain Compression, P3dB		17.5			16		dBm	
Output Third Order Intercept Point, OIP3		29			27		dBm	
Isolation, Iso		-45			-45		dB	
Input Return Loss, Rlin		-10			-10		dB	
Output Return Loss, RLout		-10			-10		dB	

Table 2. Recommended Operating Range

1. Ambient operational temperature TA = 25°C unless otherwise noted.
2. Channel-to-backside Thermal Resistance (Tchannel (Tc) = 34°C) as measured using infrared microscopy. Thermal Resistance at backside temperature (Tb) = 25°C calculated from measured data.

Description	Min.	Typical	Max.	Unit	Comments
Drain Supply Current, Id	80	120	160	mA	Vd = 4.5 V, Under any RF power drive and temperature
Drain Supply Voltage, Vd	3	4	5	V	

Table 3. Thermal Properties

Parameter	Test Conditions	Value
Thermal Resistance, θ_{jc}	Ambient operational temperature $T_A = 25^\circ\text{C}$ Channel-to-backside Thermal Resistance $T_{channel}(T_c)=34^\circ\text{C}$ Thermal Resistance at backside temperature $T_b=25^\circ\text{C}$	$\theta_{jc} = 31.47^\circ\text{C/W}$

Absolute Minimum and Maximum Ratings**Table 4. Minimum and Maximum Ratings**

Description	Min.	Max.	Unit	Comments
Drain to Ground Supply Voltage, V_d		5.5	V	
Drain Current, I_d		170	mA	
RF CW Input Power, P_{in}		10	dBm	CW
Channel Temperature, T_{ch}		+150	$^\circ\text{C}$	
Storage Temperature, T_{stg}	-65	+150	$^\circ\text{C}$	
Maximum Assembly Temperature, T_{max}		260	$^\circ\text{C}$	20 second maximum

Notes: 1. Operation in excess of any one of these conditions may result in permanent damage to this device.

Biasing and Operation

The AMMP-6222 is normally biased with a positive drain supply connected to the VDD pin through bypass capacitor as shown in Figures 19 and 20. The recommended drain supply voltage for general usage is 4V and the corresponding drain current is approximately 120mA. It is important to have 0.1uF bypass capacitor and the capacitor should be placed as close to the component as possible. Aspects of the amplifier performance may be improved over a narrower bandwidth by application of additional conjugate, linearity, or low noise (T_{opt}) matching.

For receiver front end low noise applications where high power and linearity are not often required, the AMMP-6222 can be set in low current state when pin # 5 is open as shown in Figure 19. In this configuration, the bias current is approximately 90mA, 95mA and 100mA for 3V, 4V and 5V respectively.

In applications where high output power and linearity are often required such as LO or transmitter drivers, the AMMP-6222 can be selected to operate at its highest output power by grounding pin # 5 as shown in Figure 20. At 5V, the amplifier can provide P_{sat} of ~ 20dBm. The bias current in this configuration is 115mA, 120mA and 125mA for 3V, 4V and 5V respectively.

Refer the Absolute Maximum Ratings table for allowed DC and thermal conditions.
