1 Introduction

This user's guide contains background information for the

AN30183A : Multi Power Supply (High Efficiency Power LSI)

as well as support documentation for the AN30183A Evaluation Board (AN30183A-EVB). Also included are the schematic, the bill of materials and the Board Layout for the Evaluation Board.

1.1 Overview

AN30183A is a multi power supply LSI which has high-speed response DC-DC Step Down Regulator (1-ch) and LDO regulators (4-ch).
The output DC of each power supply is variable by I2C control.

1.2 Features

—DC-DC Step Down regulator   1-ch   (Output voltage 0.8 V to 2.4 V,   Output current 600 mA)
—LDO Regulator   4-ch   (Output voltage 1.0 V to 3.3 V,   Output current 300 mA)
—I2C control   (2-slave address selectable)
—Input Voltage Range: VBAT: 2.5V~ 5.5V , DVDD: 1.7V ~ 3.0V
—Built-in Under Voltage Lockout (UVLO), Thermal Shut Down (TSD), Output Over-Current
     Protection (OCP), Short-Circuit Protection (SCP) functions

Input voltage and output current range for the evaluation Board are given in Table 1.

Table 1. Input Voltage and Output Current Summary

Evaluation Board	Input Voltage range	Output Current Range
EVB-AN30183A	VBAT = 2.5V 5.5V DVDD = 1.7V 3.0V	DC-DC Step Down Regulator: 0.8 V ~ 2.4 V 600 mA LDO Regulator: 1.0 V ~ 3.3 V 300 mA

1.3 Applications

—Portable appliance, etc

1.4 Package

— 20 pin Wafer Level Chip Size Package (WLCSP)
     (Size : 1.56 mm   2.06 mm, 0.4 mm Pitch)

1.5 Type

—Bi-CMOS IC

Note: The parameters above is subject to change for improvement without notice.

1.6 Simplified Application Circuit
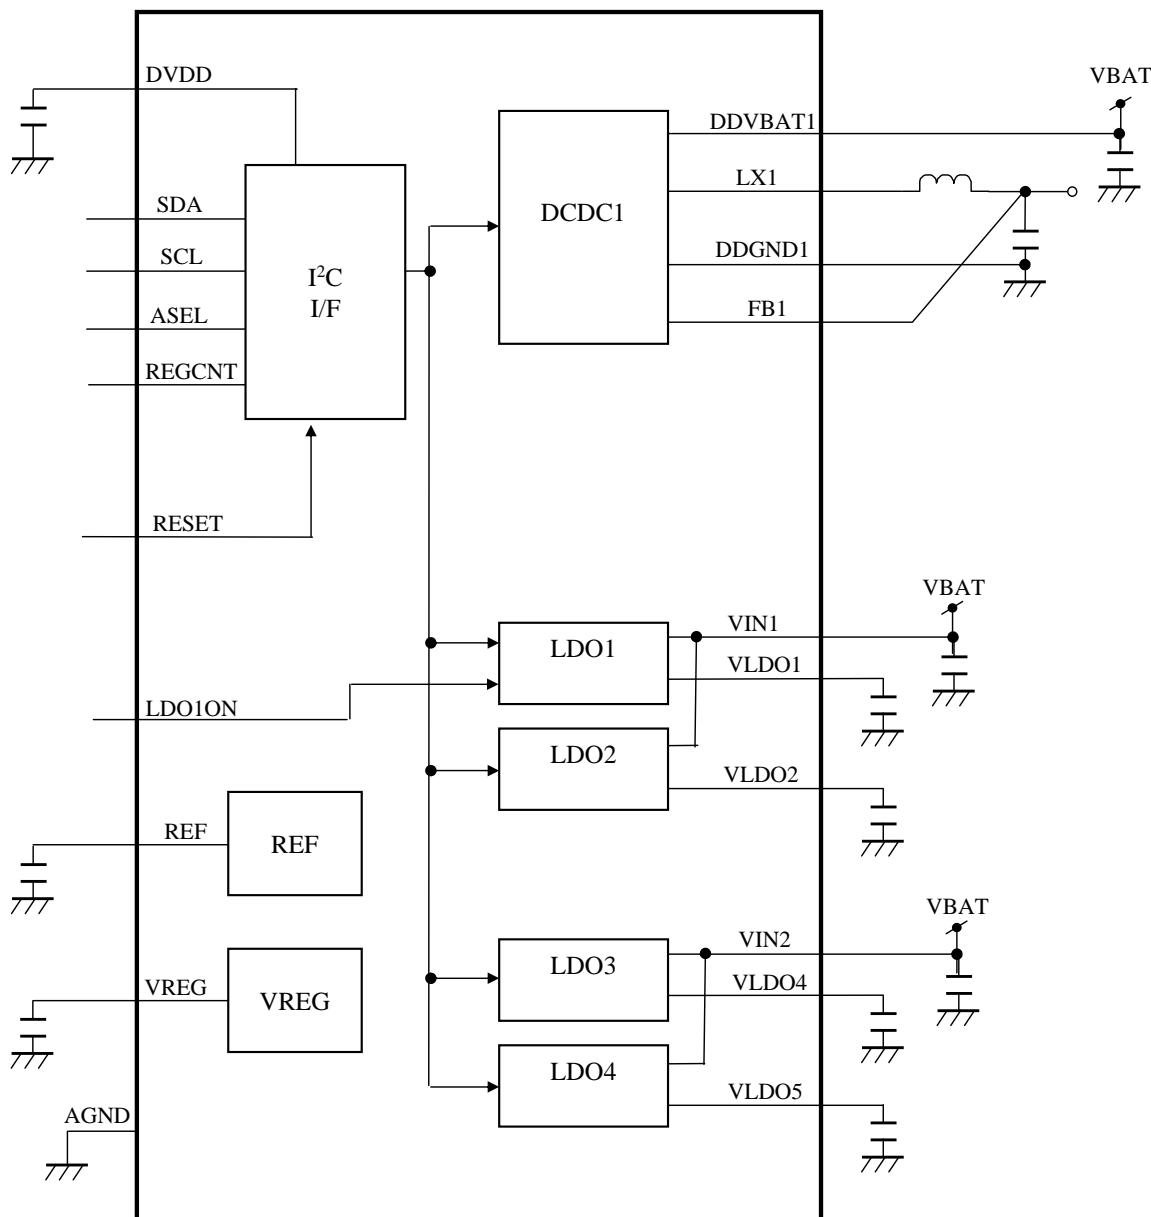

Figure 1. Block Diagram

Notes) • This application circuit is an example. The operation of mass production set is not guaranteed. You should perform enough evaluation and verification on the design of mass production set. You are fully responsible for the incorporation of the above application circuit and information in the design of your equipment.

　　　　• This block diagram is for explaining functions. Part of the block diagram may be omitted, or it may be simplified.

2   Evaluation Board

This section describes Structure, Connection and Main Test Points of Evaluation Board.

2.1   Structure

Evaluation Board consists of **AN30183A Evaluation Board** and **USB Microcontroller Board** as figure 2.
IIC connector of AN30183A Evaluation Board is connected to CN1 of USB Microcontroller Board by a cable.

AN30183A Evaluation Board   **USB Microcontroller Board**

1 Only JP1 should be shorted.
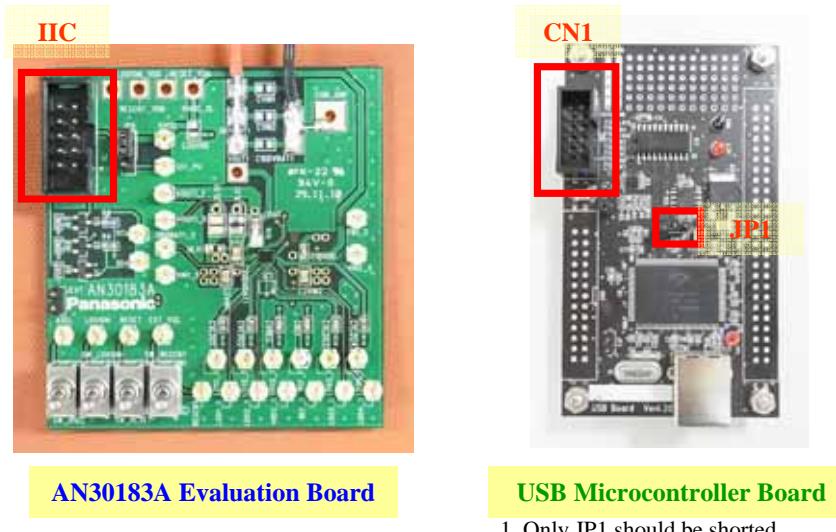

Figure 2. Structure of Evaluation Board

2.2   Connection

Evaluation Board should be connected to PC with USB Cable as Figure 3.

PC   USB Cable   Evaluation Board
AN30183A Evaluation Board is connected to
USB microcontroller Board by a cable

2.4 Switches and Jumpers Setup

ASEL pin, LDO1ON pin, RESET pin, REGCNT pin are able to be controlled by SW-ASEL, SW-LDO1ON, SW-RESET, SW-REGCNT (Figure 5).

JP8 supplies the voltage for I2C communications to USB Microcontroller Board. Connect the pin1 to the pin2 to be shown in figure 6 for evaluation.

JEXT supplies the voltage for SW_RESET, SW_REGCNT and SW_LDO1ON. Connect the pins to be shown in figure 6.
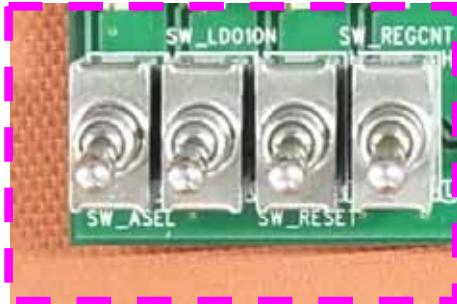

Figure 5. Appearance of SW-ASEL, SW-LDO1ON, SW-RESET and SW-REGCNT

4   Operating Procedure

This section describes how to use Evaluation Board and Serial Controller software.

4.1   Start of Process

Connect Evaluation Board to PC with USB Cable. (cf. section 2.2)
Supply VBAT＝2.5～5.5V and DVDD=1.7～3.0V on Evaluation Board.
Before using Evaluation Board, Installation of a program to PC is needed.
 Please refer to the file : Install Manual of Serial Controller(AN30183A).pdf
 If this has ever been done, ignore this step.
Start up the Serial Controller software : AN301830_Serial Controller ver1.0a.exe
In the opening window, Choose [NEW TYPE(EXUSB_FX2)I2C Control] button.
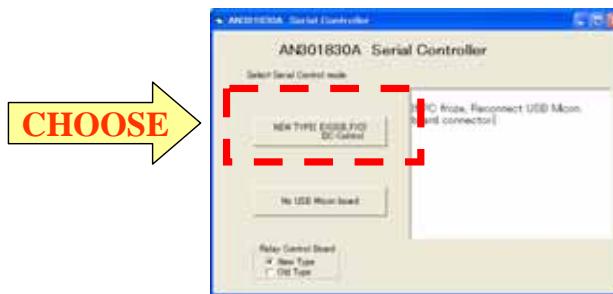

Figure 8. Starting Window of Serial Controller Software

Serial Controller Software starts.

4.2 Operating Instructions

Operating Instructions on Operating window of Serial Controller software.

Figure 9. Operating Instructions on Operating Window of Serial Controller Software

Slave Address
 Set Slave Address of I2C communication. Choose [L=1110010x]. Choose the same one as the SW_ASEL setting on AN30183A Evaluation Board.
 Set Write Data
 Click the bit data you want to change, the data will be changed 0→1 or 1→0.
 Indicate Read Data
 8bit binary data read from AN30183A IC is indicated.
 Write Data (1 Address)
 Send the write data set at 2).
 Read Data (1 Address)
 Read 8bit binary data from AN30183A IC and indicate at 3).
) Write Data (All Address)
 Send all write data set in the operating window.
 Read Data (All Address)
 Read all data from AN30183A IC and indicate to the operating window.
 Write Data (All Address) Repeatedly
 Repeat 6) infinitely.
 Read Data (All Address) Repeatedly
 Repeat 7) infinitely.
  Stop
 Stop and .

Note: The parameters above is subject to change for improvement without notice.

<REGCNT pin control – set up method>

(1) REGCNT Pin Control setup (excluding LDO1)

● Initial setup

1) Select the LDO/DCDC to be controlled by REGCNT
   (Address:04h Single Bit from D7-5, D3 should be set to "H")
   Set D0 to " H"
2) Set the LDO/DCDC Startup register mentioned above in   to "H"
   (To control LDO1 set Address:00h D2:LDO1ON to "H")
    Set the LDO to be controlled to Normal Mode (Address:05h Default)

● Startup Control

3) LDO/DCDC selected in 1) above will startup when REGCNT is set to "H"
   Power Save Mode for the LDO can be controlled by the I2C
   When the Startup register mentioned in 2) above (Address:00h) is set to "L", the LDO/DCDC will turn off.
4) The Startup for LDO/DCDC not selected in 1) can also be controlled by the I2C
5) To turn off the LDO mentioned in 1) above, set the REGCNT to "L".
   When the LDO is turned OFF in the Power Save Mode, reset Address:05h to Normal Mode before turning on
   the LDO using the REGCNT pin.

● Example Using the REGCNT pin to control LDO2 and LDO3

1) ADDRESS 04h   DATA 61h
2) ADDRESS 00h   DATA 18h
3) Set REGCNT pin "L" to "H" : LDO2,3 Startup
4) Use I2C to control the Output Voltage and Power Save Mode settings
5) To stop LDO2 and LDO3, Set REGCNT from "H" to "L"

(2) Control using the I2C only

● Initial Setup
   No special settings required after RESET
   (ADDRESS 04h Bit D0 set to "L)

● (Startup control)
   The REGCNT pin should be set to "L" when using the I2C for LDO/DCDC Startup/Shutdown, Power Save Mode
   and Output Voltage Setup.

Note: The parameters above is subject to change for improvement without notice.

IMPORTANT NOTICE

1. When using the IC for new models, verify the safety including the long-term reliability for each product.

2. When the application system is designed by using this IC, please confirm the notes in this book.
   Please read the notes to descriptions and the usage notes in the book.

3. This IC is intended to be used for general electronic equipment.
   Consult our sales staff in advance for information on the following applications: Special applications in which exceptional quality and reliability are required, or if the failure or malfunction of this IC may directly jeopardize life or harm the human body.
   Any applications other than the standard applications intended.
   > (1) Space appliance (such as artificial satellite, and rocket)
   > (2) Traffic control equipment (such as for automotive, airplane, train, and ship)
   > (3) Medical equipment for life support
   > (4) Submarine transponder
   > (5) Control equipment for power plant
   > (6) Disaster prevention and security device
   > (7) Weapon
   > (8) Others : Applications of which reliability equivalent to (1) to (7) is required
   Our company shall not be held responsible for any damage incurred as a result of or in connection with the IC being used for any special application, unless our company agrees to the use of such special application.
   However, for the IC which we designate as products for automotive use, it is possible to be used for automotive.

4. This IC is neither designed nor intended for use in automotive applications or environments unless the IC is designated by our company to be used in automotive applications.
   Our company shall not be held responsible for any damage incurred by customers or any third party as a result of or in connection with the IC being used in automotive application, unless our company agrees to such application in this book.

5. Please use this IC in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Our company shall not be held responsible for any damage incurred as a result of our IC being used by our customers, not complying with the applicable laws and regulations.

6. Pay attention to the direction of the IC. When mounting it in the wrong direction onto the PCB (printed-circuit-board), it might be damaged.

7. Pay attention in the PCB (printed-circuit-board) pattern layout in order to prevent damage due to short circuit between pins.
   In addition, refer to the Pin Description for the pin configuration.

8. Perform visual inspection on the PCB before applying power, otherwise damage might happen due to problems such as solder-bridge between the pins of the IC. Also, perform full technical verification on the assembly quality, because the same damage possibly can happen due to conductive substances, such as solder ball, that adhere to the IC during transportation.

9. Take notice in the use of this IC that it might be damaged when an abnormal state occurs such as output pin-VCC short (Power supply fault), output pin-GND short (Ground fault), or output-to-output-pin short (load short). Safety measures such as installation of fuses are recommended because the extent of the above-mentioned damage will depend on the current capability of the power supply.

10. The protection circuit is for maintaining safety against abnormal operation. Therefore, the protection circuit should not work during normal operation.
    Especially for the thermal protection circuit, if the area of safe operation or the absolute maximum rating is momentarily exceeded due to output pin to VCC short (Power supply fault), or output pin to GND short (Ground fault), the IC might be damaged before the thermal protection circuit could operate.

11. Unless specified in the product specifications, make sure that negative voltage or excessive voltage are not applied to the pins because the IC might be damaged, which could happen due to negative voltage or excessive voltage generated during the ON and OFF timing when the inductive load of a motor coil or actuator coils of optical pick-up is being driven.

12. Product which has specified ASO (Area of Safe Operation) should be operated in ASO

13. Verify the risks which might be caused by the malfunctions of external components.

14. Due to the unshielded structure of this IC, functions and characteristics of the IC cannot be guaranteed under the exposure of light. During normal operation or even under testing condition, please ensure that the IC is not exposed to light.

15. Please ensure that your design does not have metal shield parts touching the chip surface as the surface potential is GND voltage.
