

**300mA HIGH SPEED, EXTREMELY LOW NOISE CMOS LDO REGULATOR**
**Description**

The AP2127 Series are positive voltage regulator ICs fabricated by CMOS process.

The AP2127 Series have features of low dropout voltage, low noise, high output voltage accuracy, and low current consumption which make them ideal for use in various battery-powered devices.

AP2127 has 1.0V, 1.2V, 1.5V, 1.8V, 2.5V, 2.8V, 3.0V, 3.3V, 4.2V, 4.75V, 5.2V fixed voltage versions and 0.8V to 5.5V adjustable voltage versions.

AP2127 Series are available in SOT-23 (for fixed versions only), SOT-23-3 (for fixed versions only), SOT-23-5, SOT-89 (for fixed versions only) and DFN-2x2-6 packages.

**Applications**

- Datacom
- Notebook Computers
- Mother Board

- Notes:
1. No purposely added lead. Fully EU Directive 2002/95/EC (RoHS) & 2011/65/EU (RoHS 2) compliant.
  2. See [http://www.diodes.com/quality/lead\\_free.html](http://www.diodes.com/quality/lead_free.html) for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green" and Lead-free.
  3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

**Features**

- Wide Operating Voltage: 2.5V to 6V
- High Output Voltage Accuracy:  $\pm 2\%$
- High Ripple Rejection:  
68dB @  $f = 1\text{kHz}$ , 54dB @  $f = 10\text{kHz}$
- Low Standby Current: 0.1 $\mu\text{A}$
- Low Dropout Voltage: 170mV @ 300mA for  $V_{\text{OUT}} = 3.3\text{V}$ , 140mV @ 300mA for  $V_{\text{OUT}} = 5.2\text{V}$
- Low Quiescent Current: 60 $\mu\text{A}$  Typical
- Low Output Noise: 60 $\mu\text{V}_{\text{RMS}}$  @  $V_{\text{OUT}} = 0.8\text{V}$
- Short Current Limit: 50mA
- Over Temperature Protection
- Compatible with Low ESR Ceramic Capacitor:  
1 $\mu\text{F}$  for  $C_{\text{IN}}$  and  $C_{\text{OUT}}$
- Excellent Line/Load Regulation
- Soft Start Time: 50 $\mu\text{s}$
- Auto Discharge Resistance:  $R_{\text{DS(ON)}} = 60\Omega$
- **Totally Lead-Free & Fully RoHS Compliant (Notes 1 & 2)**
- **Halogen and Antimony Free. "Green" Device (Note 3)**

Note: 4. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

## Recommended Operating Conditions (@T<sub>A</sub> = +25°C, unless otherwise specified.)

| Parameter                           | Symbol          | Min | Max | Unit |

**Region of Stable  $C_{OUT}$  ESR vs. Output Current ( $C_{OUT} = 4.7\mu F$ )**

## Application Notes

### Input Capacitor

A 1μF ceramic capacitor is recommended to connect between  $V_{IN}$  and GND pins to decouple input power supply glitch and noise. The amount of the capacitance may be increased without limit. This input capacitor must be located as close as possible to the device to assure input stability and less noise. For PCB layout, a wide copper trace is required for both  $V_{IN}$  and GND.

### Output Capacitor

The output capacitor is required to stabilize and help transient response for LDO. The AP2127 is stable with very small ceramic output capacitor with a low ESR 1μF or higher of X7R or X5R MLCC capacitor, which will be sufficient at full temperature ranges. Additional capacitance helps to reduce undershoot and overshoot during transient. Place output capacitor as close as possible to  $V_{OUT}$  and GND pins, and keep the leads as short as possible.

### Adjustable Operation

For adjustable version, the output voltage is calculated by:

$$V_{OUT} = V_{REF} \left( 1 + \frac{R_1}{R_2} \right)$$

Where  $V_{REF} = 0.8V$  (the internal reference voltage)

Rearranging the equation will give the following that is used for adjusting the output to a particular voltage:

$$R_1 = R_2 \left( \frac{V_{OUT}}{V_{REF}} - 1 \right)$$

For AP2127, the resistor at the low side ( $R_2$ ) can be selected from 5kΩ to 200kΩ.

In order to improve the stability and to decrease the noise level of the adjustable version, a feed-forward capacitor is suggested to be placed between  $V_{OUT}$  and ADJ pins (Figure 1). It's recommended that this feed-forward capacitor value can be calculated as:

$$0.7kHz \leq \frac{1}{2\pi \times R_1 \times C_{ff}} \leq 15kHz$$

The recommended value of the feed-forward capacitor for different resistor divider ratios is shown in the table below.

| Output Voltage | R1     | R2     | C <sub>ff</sub> |
|----------------|--------|--------|-----------------|
| 1.2V           | 7.5kΩ  | 15kΩ   | 2.7nF           |
| 1.6V           | 7.5kΩ  | 7.5kΩ  | 2.7nF           |
| 1.8V           | 22.5kΩ | 18kΩ   | 1nF             |
| 1.9V           | 7.5kΩ  | 5.49kΩ | 2.7nF           |
| 2.5V           | 38.3kΩ | 18kΩ   | 560pF           |
| 3.3V           | 56.2kΩ | 18kΩ   | 390pF           |
| 4.0V           | 120kΩ  | 30.1kΩ | 180pF           |

Table 1 Output Voltage Setting Guide

## Application Notes (cont.)

Figure 1. Application Circuit with Feed-forward Capacitor

### Current Limit Protection

When output current at V<sub>OUT</sub> pin is higher than current limit threshold, the current limit protection will be triggered and clamp the output current to prevent over-current and to protect the regulator and load from damaged due to overheating.

### Short Circuit Protection

When V<sub>OUT</sub> pin is shorted to GND, short circuit protection will be triggered and clamp the output current to approximately 50mA.

### Auto discharge with Shutdown Version

For shutdown version, an auto discharge MOSFET with R<sub>DS(ON)</sub> of 60Ω typical is integrated between V<sub>OUT</sub> and GND pins, which can discharge the charge of the output capacitors quickly when turning off AP2127 with Shutdown pin.

### Thermal Consideration

Internal thermal protection circuitry of AP2127 is used to protect device during overload conditions. For continuous operation, ensure not to exceed the operating junction temperature range of +125°C.

The power dissipation definition in the device is:

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_Q$$

The maximum power dissipation depends on the thermal resistance of IC package, PCB layout and the surrounding airflow. The maximum power dissipation can also be calculated as:

$$P_{D(MAX)} = (T_{J(MAX)} - T_A) / \theta_{JA}$$

The maximum power dissipation for SOT-23-5 package (least copper size) at T<sub>A</sub> = +25°C can be calculated as:

$$P_{D(MAX)} = (125^\circ\text{C} - 25^\circ\text{C}) / (250^\circ\text{C/W}) = 0.4\text{W}$$

## Marking Information

### (1) SOT-23, SOT-23-3

 : Logo  
 XXX: Marking ID (See Ordering Information)

### (2) SOT-23-5

 : Logo  
 XXX: Marking ID (See Ordering Information)

### (3) SOT-89

First Line: Logo and Marking ID (See Ordering Information)  
 Second Line: Date Code  
 Y: Year  
 WW: Work Week of Molding  
 A: Assembly House Code  
 XX: 7th and 8th Digits of Batch Number

### (4) DFN-2x2-6

XX: Marking ID (See Ordering Information)

## Package Outline Dimensions (All dimensions in mm.)

### (1) Package Type: SOT-23

**Package Outline Dimensions** (cont.) (All dimensions in mm.)

(2) Package Type: SOT-23-3

**Package Outline Dimensions** (cont.) (All dimensions in mm.)

(3) Package Type: SOT-23-5

## Package Outline Dimensions (cont.) (All dimensions in mm.)

### (4) Package Type: SOT-89

## Package Outline Dimensions (cont.) (All dimensions in mm.)

### (5) Package Type: DFN-2x2-6

**IMPORTANT NOTICE**

DIODES INCORPORATED MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARDS TO THIS DOCUMENT, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION).

Diodes Incorporated and its subsidiaries reserve the right to make modifications, enhancements, improvements, corrections or other changes without further notice to this document and any product described herein. Diodes Incorporated does not assume any liability arising out of the application or use of this document or any product described herein; neither does Diodes Incorporated convey any license under its patent or trademark rights, nor the rights of others. Any Customer or user of this document or products described herein in such applications shall assume all risks of such use and will agree to hold Diodes Incorporated and all the companies whose products are represented on Diodes Incorporated website, harmless against all damages.

Diodes Incorporated does not warrant or accept any liability whatsoever in respect of any products purchased through unauthorized sales channel. Should Customers purchase or use Diodes Incorporated products for any unintended or unauthorized application, Customers shall indemnify and hold Diodes Incorporated and its representatives harmless against all claims, damages, expenses, and attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized application.

Products described herein may be covered by one or more United States, international or foreign patents pending. Product names and markings noted herein may also be covered by one or more United States, international or foreign trademarks.

This document is written in English but may be translated into multiple languages for reference. Only the English version of this document is the final and determinative format released by Diodes Incorporated.

**LIFE SUPPORT**

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
