

## Features

- Floating channel designed for bootstrap operation
- Fully operational to +500 V or +600 V
- Tolerant to negative transient voltage –  $dV/dt$  immune
- Gate drive supply range from 10 V to 20 V
- Undervoltage lockout for both channels
- 3.3 V input logic compatible
- Separate logic supply range from 3.3 V to 20 V
- Logic and power ground  $\pm 5$  V offset
- CMOS Schmitt-triggered inputs with pull-down
- Cycle by cycle edge-triggered shutdown logic
- Matched propagation delay for both channels
- Output in phase with inputs
- Leadfree, RoHS Compliant
- Automotive qualified\*

## Typical Applications

- Hybrid electric vehicles
- Air condition drives, pumps, fans
- Automotive general purpose dual LS/HS driver
- Automotive motor drives
- Automotive DC/DC converters
- Automotive injection control

## Product Summary

Topology	2 channels
$V_{OFFSET}$	AUIRS2110 500 V max
	AUIRS2113 600 V max
$V_{OUT}$	10 V – 20 V
$I_{o+}$ & $I_{o-}$ (typical)	2.5 A / 2.5 A
$t_{ON}$ & $t_{OFF}$ (typical)	140 ns & 120 ns
Delay Matching (max.)	35 ns max

## Package Option

## Typical Connection Diagram

(Refer to Lead Assignments for correct pin configuration). This/These diagram(s) show electrical connections only. Please refer to our Application Notes and Design Tips for proper circuit board layout.

## Description

The AUIRS211(0,3)S are high voltage, high speed power MOSFET and IGBT drivers with independent high and low side referenced output channels. Proprietary HVIC and latch immune CMOS technologies enable ruggedized monolithic construction. The logic input is compatible with standard CMOS or LSTTL output, down to 3.3 V logic. The output drivers feature a high pulse current buffer stage designed for minimum driver cross-conduction. Propagation delays are matched to simplify use in high frequency applications. The floating channel can be used to drive an N-channel power MOSFET or IGBT in the high side configuration which operates up to 500 V or 600 V.

**Qualification Information<sup>†</sup>**

<b>Qualification Level</b>		Automotive (per AEC-Q100 <sup>††</sup> )	
Comments: This family of ICs has passed an Automotive qualification. IR's Industrial and Consumer qualification level is granted by extension of the higher Automotive level.			
<b>Moisture Sensitivity Level</b>		SOIC16W	MSL3 <sup>†††</sup> 260°C (per IPC/JEDEC J-STD-020)
<b>ESD</b>	Machine Model	Class M2 (Pass +/-200V) (per AEC-Q100-003)	
	Human Body Model	Class H1B (Pass +/-1000V) (per AEC-Q100-002)	
	Charged Device Model	Class C4 (Pass +/-1000V) (per AEC-Q100-011)	
<b>IC Latch-Up Test</b>		Class II, Level A (per AEC-Q100-004)	
<b>RoHS Compliant</b>		Yes	

<sup>†</sup> Qualification standards can be found at International Rectifier's web site <http://www.irf.com/>

<sup>††</sup> Exceptions to AEC-Q100 requirements are noted in the qualification report.

<sup>†††</sup> Higher MSL ratings may be available for the specific package types listed here. Please contact your International Rectifier sales representative for further information.

## Absolute Maximum Ratings

Absolute Maximum Ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

Symbol	Definition	Min.	Max.	Units
$V_B$	High-side floating supply voltage	(AUIRS2110) (AUIRS2113)	-0.3 -0.3	520 (†) 620 (†)
$V_S$	High-side floating supply offset voltage		$V_B - 20$	$V_B + 0.3$
$V_{HO}$	High-side floating output voltage		$V_S - 0.3$	$V_B + 0.3$
$V_{CC}$	Low-side fixed supply voltage		-0.3	20
$V_{LO}$	Low-side output voltage		-0.3	$V_{CC} + 0.3$
$V_{DD}$	Logic supply voltage		-0.3	$V_{SS} + 20$ (†)
$V_{SS}$	Logic supply offset voltage		$V_{CC} - 20$	$V_{CC} + 0.3$
$V_{IN}$	Logic input voltage (HIN, LIN & SD)		$V_{SS} - 0.3$	$V_{DD} + 0.3$
$dV_S/dt$	Allowable offset supply voltage transient (Fig. 2)	—	50	V/ns
$P_D$	Package power dissipation @ $TA \leq 25^\circ C$	—	1.25	W
$R_{thJA}$	Thermal resistance, junction to ambient	—	100	°C/W
$T_J$	Junction temperature	—	150	
$T_S$	Storage temperature	-55	150	
$T_L$	Lead temperature (soldering, 10 seconds)	—	300	

† All supplies are fully tested at 25 V, and an internal 20 V clamp exists for each supply.

## Recommended Operating Conditions

The input/output logic timing diagram is shown in Figure 1. For proper operation the device should be used within the recommended conditions. The  $V_S$  and  $V_{SS}$  offset rating are tested with all supplies biased at 15 V differential.

Symbol	Definition	Min.	Max.	Units
$V_B$	High-side floating supply absolute voltage	$V_S + 10$	$V_S + 20$	
$V_S$	High-side floating supply offset voltage	(AUIRS2110) (AUIRS2113)	† †	500 600
$V_{HO}$	High-side floating output voltage	$V_S$	$V_B$	
$V_{CC}$	Low-side fixed supply voltage	10	20	
$V_{LO}$	Low-side output voltage	0	$V_{CC}$	
$V_{DD}$	Logic supply voltage	$V_{SS} + 3$	$V_{SS} + 20$	
$V_{SS}$	Logic ground offset voltage	-5 (††)	5	
$V_{IN}$	Logic input voltage (HIN, LIN & SD)	$V_{SS}$	$V_{DD}$	
$T_A$	Ambient temperature	-40	125	°C

† Logic operational for  $V_S$  of -4 V to +500 V. Logic state held for  $V_S$  of -4 V to  $-V_{BS}$ .  
(Please refer to the Design Tip DT97-3 for more details).

†† When  $V_{DD} < 5$  V, the minimum  $V_{SS}$  offset is limited to  $-V_{DD}$ .

## Static Electrical Characteristics

Unless otherwise noted, these specifications apply for an operating junction temperature range of  $-40^{\circ}\text{C} \leq \text{T}_j \leq 125^{\circ}\text{C}$  with bias conditions of  $V_{\text{BIAS}} (V_{\text{CC}}, V_{\text{BS}}, V_{\text{DD}}) = 15 \text{ V}$ ,  $V_{\text{SS}} = \text{COM}$ . The  $V_{\text{IL}}$ ,  $V_{\text{TH}}$  and  $I_{\text{IN}}$  parameters are referenced to  $V_{\text{SS}}$  and are applicable to all three logic input leads: HIN, LIN and SD. The  $V_{\text{O}}$ , and  $I_{\text{O}}$  parameters are referenced to COM and are applicable to the respective output leads: HO or LO.

Symbol	Definition	Min	Typ	Max	Units	Test Conditions
$V_{\text{IH}}$	Logic "1" input voltage	9.5	—	—	V	$I_{\text{O}} = 0 \text{ A}$ $I_{\text{O}} = 20 \text{ mA}$
$V_{\text{IL}}$	Logic "0" input voltage	—	—	6.0		
$V_{\text{OH}}$	High level output voltage, $V_{\text{BIAS}} - V_{\text{O}}$	—	—	1.4		
$V_{\text{OL}}$	Low level output voltage, $V_{\text{O}}$	—	—	0.15		
$I_{\text{LK}}$	Offset supply leakage current	—	—	50	$\mu\text{A}$	$V_B = V_S = 500 \text{ V}/600 \text{ V}$ $V_{\text{IN}} = 0 \text{ V} \text{ or } V_{\text{DD}}$ $V_{\text{IN}} = V_{\text{DD}}$ $V_{\text{IN}} = 0 \text{ V}$
$I_{\text{QBS}}$	Quiescent $V_{\text{BS}}$ supply current	—	70	130		
$I_{\text{QCC}}$	Quiescent $V_{\text{CC}}$ supply current	—	125	230		
$I_{\text{QDD}}$	Quiescent $V_{\text{DD}}$ supply current	—	5	30		
$I_{\text{IN+}}$	Logic "1" input bias current	—	20	40		
$I_{\text{IN-}}$	Logic "0" input bias current	—	—	5.0	V	$V_{\text{O}} = 0 \text{ V}$ , $V_{\text{IN}} = V_{\text{DD}}$ $PW \leq 10 \text{ us}$
$V_{\text{BSUV+}}$	$V_{\text{BS}}$ supply undervoltage positive going threshold	7.5	8.6	9.7		
$V_{\text{BSUV-}}$	$V_{\text{BS}}$ supply undervoltage negative going threshold	7.0	8.2	9.4		
$V_{\text{CCUV+}}$	$V_{\text{CC}}$ supply undervoltage positive going threshold	7.4	8.5	9.6		
$V_{\text{CCUV-}}$	$V_{\text{CC}}$ supply undervoltage negative going threshold	7.0	8.2	9.4	A	$V_{\text{O}} = 15 \text{ V}$ , $V_{\text{IN}} = 0 \text{ V}$ $PW \leq 10 \text{ us}$
$I_{\text{O+}}$	Output high short circuit pulsed current <sup>(†)</sup>	2.0	2.5	—		
$I_{\text{O-}}$	Output low short circuit pulsed current <sup>(†)</sup>	2.0	2.5	—		

(†) Guaranteed by design

## Dynamic Electrical Characteristics

Unless otherwise noted, these specifications apply for an operating junction temperature range of  $-40^{\circ}\text{C} \leq \text{T}_j \leq 125^{\circ}\text{C}$  with bias conditions of  $V_{\text{BIAS}} (V_{\text{CC}}, V_{\text{BS}}, V_{\text{DD}}) = 15 \text{ V}$ ,  $C_L = 1000 \text{ pF}$ , and  $V_{\text{SS}} = \text{COM}$ . The dynamic electrical characteristics are measured using the test circuit shown in Fig. 3.

Symbol	Definition	Min	Typ	Max	Units	Test Conditions
$t_{\text{on}}$	Turn-on propagation delay	—	140	230	ns	$V_S = 0 \text{ V}$ $V_S = 500 \text{ V}/600 \text{ V}$
$t_{\text{off}}$	Turn-off propagation delay	—	120	210		
$t_{\text{sd}}$	Shutdown propagation delay	—	125	220		
$t_r$	Turn-on rise time	—	25	40		
$t_f$	Turn-off fall time	—	15	30		
MT	Delay matching, HS & LS turn on/off	—	—	35		

Note: Please refer to figures in Parameter Temperature Trends section

## Parameter Temperature Trends

Figures illustrated in this chapter provide information on the experimental performance of the AUIRS211(0,3)S HVIC. The line plotted in each figure is generated from actual lab data. A large number of individual samples were tested at three temperatures (-40 °C, 25 °C, and 125 °C) in order to generate the experimental curve. The line consists of three data points (one data point at each of the tested temperatures) that have been connected together to illustrate the understood trend. The individual data points on the Typ. curve were determined by calculating the averaged experimental value of the parameter (for a given temperature).

## **IMPORTANT NOTICE**

Unless specifically designated for the automotive market, International Rectifier Corporation and its subsidiaries (IR) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or services without notice. Part numbers designated with the "AU" prefix follow automotive industry and / or customer specific requirements with regards to product discontinuance and process change notification. All products are sold subject to IR's terms and conditions of sale supplied at the time of order acknowledgment.

IR warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with IR's standard warranty. Testing and other quality control techniques are used to the extent IR deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

IR assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using IR components. To minimize the risks with customer products and applications, customers should provide adequate design and operating safeguards.

Reproduction of IR information in IR data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alterations is an unfair and deceptive business practice. IR is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of IR products or serviced with statements different from or beyond the parameters stated by IR for that product or service voids all express and any implied warranties for the associated IR product or service and is an unfair and deceptive business practice. IR is not responsible or liable for any such statements.

IR products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or in other applications intended to support or sustain life, or in any other application in which the failure of the IR product could create a situation where personal injury or death may occur. Should Buyer purchase or use IR products for any such unintended or unauthorized application, Buyer shall indemnify and hold International Rectifier and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that IR was negligent regarding the design or manufacture of the product.

IR products are neither designed nor intended for use in military/aerospace applications or environments unless the IR products are specifically designated by IR as military-grade or "enhanced plastic." Only products designated by IR as military-grade meet military specifications. Buyers acknowledge and agree that any such use of IR products which IR has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

IR products are neither designed nor intended for use in automotive applications or environments unless the specific IR products are designated by IR as compliant with ISO/TS 16949 requirements and bear a part number including the designation "AU". Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, IR will not be responsible for any failure to meet such requirements.

For technical support, please contact IR's Technical Assistance Center
