

**PART NUMBER:** CPE-163

**DESCRIPTION:** piezo audio transducer

## SPECIFICATONS

|                        |                                      |                                       |
|------------------------|--------------------------------------|---------------------------------------|
| operating voltage      | 30 Vp-p max.                         |                                       |
| current consumption    | 10 mA max.                           | at 10 Vp-p, sqare wave, 4.8 Khz       |
| sound pressure level   | 80 db min.                           | at 10 cm/10 Vp-p, sqare wave, 4.8 Khz |
| electrostatic capacity | 14,000 $\pm$ 30%                     | at 1 Khz/1 V                          |
| operating temperature  | -30 ~ +85° C                         |                                       |
| storage tempurature    | -40 ~ +95° C                         |                                       |
| dimensions             | Ø13.0 x H2.5 mm                      |                                       |
| weight                 | .35 g max.                           |                                       |
| material               | ABS UL-94 1/16" HB high heat (black) |                                       |
| terminal               | wire type                            |                                       |
| RoHS                   | yes                                  |                                       |

## APPEARANCE DRAWING

tolerance:  $\pm 0.5$

units: mm

**PART NUMBER:** CPE-163

**DESCRIPTION:** piezo audio transducer

## FREQUENCY RESPONSE CURVE

## MEASUREMENT METHOD

S.P.L. Measuring Circuit

Input Signal: 10 Vp-p, 4.8 KHz, square wave

Mic: RION S.P.L. meter UC30 or equivalent

S.G.: Hewlett Packard 33120A function generator or equivalent

**PART NUMBER:** CPE-163**DESCRIPTION:** piezo audio transducer**MECHANICAL CHARACTERISTICS**

| item                      | test condition                                                                                                                                                                          | evaluation standard                                                                                                                                                                        |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| solderability             | Stripped wires are immersed in rosin for 5 seconds and then immersed in solder bath of $230 \pm 5^{\circ}\text{C}$ for $3 \pm 1$ seconds.                                               | 90% min. of the lead terminals will be wet with solder (except the edge of the terminal).                                                                                                  |
| soldering heat resistance | Stripped wires are immersed up to 1.5mm from buzzer's body in solder bath of $300 \pm 5^{\circ}\text{C}$ for $3 \pm 0.5$ seconds or $260 \pm 5^{\circ}\text{C}$ for $10 \pm 1$ seconds. | No interference in operation.                                                                                                                                                              |
| lead wire pull strength   | The pull force shall be applied to lead wire:<br>Horizontal 3.0N for 30 seconds<br>Vertical 2.0N for 30 seconds                                                                         | No damage or cutting off.                                                                                                                                                                  |
| vibration                 | The buzzer shall be measured after applying a vibration amplitude of 1.5 mm with 10 to 55 Hz band of vibration frequency to each of the 3 perpendicular directions for 2 hours.         | The value of oscillation frequency/current consumption should be $\pm 10\%$ of the initial measurements. The SPL should be within $\pm 10\text{dB}$ compared with the initial measurement. |
| drop test                 | The part will be dropped from a height of 75 cm onto a 40 mm thick wooden board 3 times in 3 axes (X, Y, Z) for a total of 9 drops.                                                     |                                                                                                                                                                                            |

**ENVIRONMENT TEST**

| item             | test condition                                                                                                                                                  | evaluation standard                                                                                                                                                                                                                                                                         |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| high temp. test  | After being placed in a chamber at $+95^{\circ}\text{C}$ for 240 hours.                                                                                         | The buzzer will be measured after being placed at $+25^{\circ}\text{C}$ for 4 hours. The value of the oscillation frequency/current consumption should be $\pm 10\%$ compared to the initial measurements. The SPL should be within $\pm 10\text{dB}$ compared to the initial measurements. |
| low temp. test   | After being placed in a chamber at $-40^{\circ}\text{C}$ for 240 hours.                                                                                         |                                                                                                                                                                                                                                                                                             |
| humidity test    | After being placed in a chamber at $+40^{\circ}\text{C}$ and $90 \pm 5\%$ relative humidity for 240 hours.                                                      |                                                                                                                                                                                                                                                                                             |
| temp. cycle test | The part shall be subjected to 5 cycles. One cycle will consist of:<br><br> |                                                                                                                                                                                                                                                                                             |
