

#### Performance

- 0% to 100% relative humidity range
- -40°C to 125°C temperature range
- Very low power consumption
- Operates from 1.5V to 3.6V
- Fast response time 5 seconds typical
- Built-in heater for fast recovery from saturation
- Recovers fully from condensation
- Fast conversion time 14ms typical

#### **Features**

- 20-pin Xplained Pro compatible connector
- I2C interface
- Xplained Pro Hardware identification Chip
- Atmel Studio 6 Project available for download
- μC C code available for download
- Selectable 8-12 bit resolution for humidity
- Selectable 12-14 bit resolution for temperature

# MEAS HTU21D XPLAINED PRO BOARD

Digital Humidity
Digital Component Sensor (DCS) Development Tools

The HTU21D Xplained Pro provides the necessary hardware to interface the HTU21D digital relative humidity and temperature sensor to any system that utilizes Xplained Pro compatible expansion ports configurable for I<sup>2</sup>C communication. The HTU21D sensor is a self-contained humidity and temperature sensor that is fully calibrated during manufacture. The sensor can operate from 1.5V to 3.6V, has selectable resolution, low battery detect, and checksum capability. The HTU21D has a low power stand-by mode for power-sensitive applications.

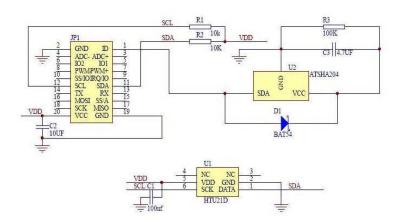

Refer to the HTU21D data sheet for detailed information regarding operation of the IC:

http://www.measspec.com/downloads/xxxxxxxxxx.pdf

#### **Specifications**

- Measures relative humidity from 0% to 100%
- Measures temperature from -40°C to 125°C
- I<sup>2</sup>C communication
- Fully calibrated
- Fast response time
- Selectable resolution
- Very low power consumption

8	N/C	Not Connected	18	N/C	Not Connected	
9	N/C	Not Connected	19	GND	Ground	
10	N/C	Not Connected	20	Vdd	Power Supply	

## Dimensions (mm)

## **Detailed Description**

#### I<sup>2</sup>C Interface

The peripheral module can interface to the host being plugged directly into an Xplained Pro extension port (configured for I<sup>2</sup>C) through connector JP1.

#### **External Control Signals**

The IC operates as an I<sup>2</sup>C slave using the standard 2 wire I<sup>2</sup>C connection scheme. The IC is controlled either by the host (through the Xplained Pro connector). In cases where one or more of the SCL and SDA signals are driven from an external source, 10k resistors R1, R2 provide pull-up. However, this also increases the apparent load to the external driving source. If the external source is not capable of driving these loads (10k), they should be removed.

#### Reference Materials

The complete software kit is available for download at: <a href="http://www.meas-spec.com/TBD/xxxxxx.zip">http://www.meas-spec.com/TBD/xxxxxx.zip</a>
Xplained Pro Extension Product Data Sheet: <a href="http://www.meas-spec.com/downloads/xxxxxxxxxx.pdf">http://www.meas-spec.com/downloads/xxxxxxxxxx.pdf</a>

## **Drivers & Software**

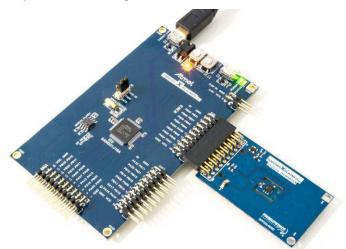

Detailed example software and drivers are available that execute directly without modification on a number of development boards that support an integrated or synthesized microprocessor. The download contains several source files intended to accelerate customer evaluation and design. The source code is written in standard ANSI C format, and all development documentation including theory/operation, register description, and function prototypes are documented in the interface file.

# **Functions Summary**

Enable heater.  enum htu21_status htu21_disable_heater (void)  Disable heater.  enum htu21_status htu21_get_heater_status (enum htu21_heater_status *)  Get heater status.  float htu21_compute_compensated_humidity (float, float)  Returns result of compensated humidity.  float htu21_compute_dew_point (float, float)		
enum htu21_status htu21_disable_heater (void)  Disable heater.  enum htu21_status htu21_get_heater_status (enum htu21_heater_status *)  Get heater status.  float htu21_compute_compensated_humidity (float, float)  Returns result of compensated humidity.  float htu21_compute_dew_point (float, float)	enum htu21_status	
Disable heater.  enum htu21_status		
enum htu21_status	enum htu21_status	/
Get heater status.  float htu21_compute_compensated_humidity (float, float)  Returns result of compensated humidity.  float htu21_compute_dew_point (float, float)	11.04.1.	
float htu21_compute_compensated_humidity (float, float)  Returns result of compensated humidity.  float htu21_compute_dew_point (float, float)	enum htu21_status	
Returns result of compensated humidity.  float htu21_compute_dew_point (float, float)		
float htu21_compute_dew_point (float, float)	float	
		<u> </u>
Returns the computed dew point.	float	
		Returns the computed dew point.

## **Project Setup**

This project is based on ATSAMD20J18 board with Measurement Specialties Xplained Pro extension board connected to EXT1 pad as shown on figure below.

## Running the Application

- 1. Download the HTU21D Xplained Pro example package on MEAS Web Page
- 2. Decompress the archive file
- 3. Open the .cproj project file with Atmel Studio 6
- 4. You will now be able to build the HTU21D example project -
- 5. Finally, run the build result on your Xplained Pro Board 🕨

#### **Application Code**

This section is intended to provide a basic example of functionality.

```
**

* \file main.c

*

* \brief HTU21 Temperature & Humidity monitoring application file
