Maximum electrical response speed (rpm) = $\frac{\text{Maximum response frequency}}{\text{Resolution}} \times 60$ Resolution

^{*1.} An inrush current of approximately 9 A will flow for approximately 0.3 ms when the power is turned ON.
*2. The maximum electrical response speed is determined by the resolution and maximum response frequency as follows:

This means that the E6A2-C Rotary Encoder will not operate electrically if its speed exceeds the maximum electrical response speed. *3. No protection is provided against water or oil.
