

F48-750

Description:

The F48-750 is a single primary and dual secondary, split bobbin design which operates with an input of 115V. The output voltage will be either 48.0V with a center-tap under a 0.75A load with the secondaries wired in series, or 24.0V under a 1.5A load with the secondaries wired in parallel. The split bobbin design eliminates the need for costly electrostatic shielding.
