

13~25A Compatible, Position Misalignment Absorption Type Power Supply Connector for PCB Connections

FX30B Series

Example of Connector Mounted Next to Another Connector

FX18 Series
(without position misalignment
absorption function)

FX30B Series
(with position misalignment
absorption function)

■Features

- 1. Contact Pitch : 3.81mm , 7.62mm**
- 2. Current Capacity : 13~25A/pin (Page 2.)**
*For details, see the derating curve.(Described on page 4.)
- 3. Connection Type: Coplanar / Vertical / Parallel**
- 4. Number of Pos. : 2 / 3 / 4 / 5 Pos.**
- 5. Position Misalignment Absorption Movable Amount: $\pm 0.3\text{mm}$**

- (1)Reliable to mounting misalignment when using multiple connectors.
- (2)Other products without position misalignment absorption can be used together.

6. Effective Mating Length : 2mm

The effective mating length is 2mm long, so it has an enough margin for the mating stroke. (3.0mm for longer contacts)

7. Multi-point Contact Structure

It has superior contact reliability by employing an independent four-point contact spring structure.

8. Low Insertion / Extraction Force

It offers low insertion/extraction force by employing a two-step contact timing sequence.

9. Robustness

Reinforcement metal fittings that securely fix the connector to the PCB are added on both sides of the connector, providing excellent deformation resistance for up, down, left and right directions.

10. Large Guide Form Leads Superior Mating Ability

A large induction form has been provided, allowing easy mating operations. (Induction amount : $\pm 1.3\text{mm}$, with position misalignment absorption amount : $\pm 1.6\text{mm}$)

11. Protected structure

Our proprietary protective wall prevents foreign materials from contacting the sensitive areas. (Compatible to JIS C 0922 Probes for verification B)

12. UL, C-UL and TÜV certifications have been achieved.

Item	Specification	Conditions
1. Contact resistance	2mΩ or less	Measured at 10 mA
2. Insulation resistance	1000MΩ or more	Measured at 250 V DC
3. Withstanding voltage	No flashover or breakdown	Conduct electricity by applying a voltage of 750 V AC for 1 minute
4. Insertion/extraction lifespan	Contact resistance : 5 mΩ or less	Insert/extract 100 times
5. Vibration resistance	No electric outage of 1μs or greater	Frequency : 10 to 55Hz, half amplitude : 0.75mm, 10 cycles in each of 3 axis directions for 5 minutes/cycle
6. Shock resistance	No electric outage of 1μs or greater	Acceleration of 490 m/s ² , duration 11 ms, sine half-wave, 3 cycles in each of the 3 axes each in both directions
7. Humidity resistance	Contact resistance : 5mΩ or less Insulation resistance : 1000MΩ or more	Temperature : 40°C, humidity : 90 to 95%, left for 96 hours
8. Temperature cycle	Contact resistance : 5mΩ or less Insulation resistance : 1000MΩ or more	Temperature : -55 → 105°C Time : 30 → 30 min., 5 cycles
9. Solder heat resistance	No melting of resin part, which affects the product performance	Solder tank : solder tank temperature : 260°C, 10 seconds Manual soldering : soldering iron temperature : 380°C, 10 seconds

Note 1 : Includes temperature rise caused by current flow.

Note 2 : The term "storage" refers to the long-term storage condition of unused products before PCB mounting.

Note 3 : Current rating per 1 contact is used.

Materials / Finish

●Receptacle/Header Common

Part	Material	Color/Finish	Specification
Insulator	Polyamide resin	Black	UL94V-0
Power supply contact	Copper alloy	Contact area : Gold plating Mounting area : Pure tin plating	———
Reinforcement metal fitting	Phosphorous bronze	Whole body : Pure tin plating	———

Product Number Structure

Refer to the chart below when determining the product specifications from the product number.

Please select from the product numbers listed in this catalog when placing orders.

●Receptacle

◆Cleaning conditions

●Organic Solvent Cleaning

Solvent	Room temperature cleaning	Heated cleaning
IPA (Isopropyl alcohol)	○	○

●Water Cleaning

When using water cleaner (terpene, alkali saponifier, etc.), please select a cleaner according to the chart of effects to metal and resin issued by each cleaner manufacture. In addition, please make sure that the connectors are not left behind without removing moisture.

●Precautions for Cleaning

If flax or cleaner remains in the connector after it was cleaned using organic solvent or water cleaner, the performance of the connector may deteriorate. Make sure that the connectors are cleaned thoroughly.

◆Usage precautions

- A position misalignment absorption function is provided in this product. Please use this product within the dimensions shown in the below diagram, while taking into account the connector mounting position misalignments and PCB mating position misalignments.

- The purpose of the position misalignment absorption function provided on this product is to absorb the misalignments between the connector mounting positions and between the PCB mating positions. **This function cannot be used for the purpose to absorb mating position misalignments due to vibrations.** Please use the connectors after the PCBs have been fixed so that the connector positions are fixed securely. Avoid supporting PCBs by connectors only, and be sure to fix the PCBs using methods other than the connectors.

- This connector is designed to correct minor mating misalignments. This ability creates a structure that allows more for more movement and shifting between its pieces than with other similar connectors. The PCB boards need to be secured as well. If they are not, vibration or other external forces will cause the connectors to become unmated.

- This product has a structure to absorb position misalignments by the spring displacement of the contacts in pitch directions. Therefore, **a spring reaction force will be generated in the pitch directions when absorbing the position misalignments** (Approximately 4 N per 1 core) Please make sure that the structure bodies (positioning pins, screws, guiding rails, and other connectors, etc.) that will be used as the positioning base have enough strength against the spring reaction force.

●Allowable Mating Gap

The effective mating length of this product is 2mm.

Use the connectors so that the gap between the header and receptacle when they are mated is within 1.0 or 1.3mm.

Particularly make sure the gap does not exceed the limits due to warping of PCB, etc.

- A reverse insertion prevention structure and an abnormal mating position prevention structure have been provided in this connector, however, if the connectors are mated with an excessive force, connector breakage may result. Avoid improper mating of connectors by applying an excessive force and connect them correctly while confirming the connector polarities shown below. shown below. tors by applying an excessive force and connect them correctly while confirming the connector polarities shown below.

- A structure in which the contact deformation does not occur under normal mating operations has been provided on this connector, however, please make sure of the following; connector edge does not come to contact with the opening for mating, connectors are not mated diagonally in an abnormal manner, and foreign substances or hard objects, etc. do not touch the contacts. Pay attention so that contact deformation which causes a contact defect does not occur.

- If the connector is inserted/extracted forcibly in a wrong direction or it is rotated when inserting/extracting, a connector breakdown or contact defect may result. Please be careful.

- This product cannot be used for the purpose of current interruption application. (Prohibition of hot-swapping)
