General Description

The Supertex HV20822 is a 220V, 16-channel, high-voltage analog switch integrated circuit (IC) configured as 2 sets of 8 single pole single throw analog switches. It is intended for use in applications requiring high voltage switching controlled by low voltage control signals such as ultrasound imaging and printers. The 2 sets of 8 analog switches are controlled by 2 input logic controls, $D_{IN}1$ and $D_{IN}2$. A logic high on $D_{IN}1$ will turn ON switches 0 to 7 and a logic high on $D_{IN}2$ will turn ON switches 8 to 15.

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

Operating Conditions

Symbol	Parameter	Value
V_{PP}	Positive high voltage supply[1]	+50V to +110V
V_{NN}	Negative high voltage supply[1]	-10V to V_{PP}-220V
V_{DD}	Logic power supply voltage[1]	4.75V to +12.6V

T_A	Operating free air-temperature	0°C to 70°C

Notes:

1 Power up/down sequence is arbitrary except GND must be powered-up first and powered-down last.

2 V_{SIG} must be $V_{NN} \le V_{SIG} \le V_{PP}$ or floating during power up/down transition.
