HV9808	HV9808PJ	HV9808X

Features

- ❑ Processed with HVCMOS® technology
- ❑ Output voltages up to 80V
- ❑ Low power level shifting
- ❑ Shift register speed 8MHz
- ❑ Latched data outputs
- ❑ Forward and reverse shifting options
- ❑ Diode to V_{PP} allows efficient power recovery
- ❑ 5V CMOS compatible inputs

General Description

The HV97 and HV98 are low-voltage serial to high-voltage parallel converters with push-pull outputs. These devices have been designed for use as drivers for AC-electroluminescent displays. They can also be used in any application requiring multiple output high-voltage current sourcing and sinking capabilities such as driving plasma panels, vacuum fluorescent displays, or large matrix LCD displays. The inputs are fully CMOS compatible.

These devices consist of a 32-bit shift register, 32 latches, and control logic to perform the polarity select and blanking of the outputs. HV_{OUT1} is connected to the first stage of the shift register through the polarity and blanking logic. Data is shifted through the shift register on the logic low to high transition of the clock. The HV97 shifts data in the clockwise direction when viewed from the top of the package and the HV98 shifts in the counterclockwise direction. A data output buffer is provided for cascading devices. This output reflects the current status of the last bit of the shift register (HV_{OUT32}). Operation of the shift register is not affected by the $\overline{LE}$ (latch enable), $\overline{BL}$ (blanking), or the $\overline{POL}$ (polarity) inputs. Transfer of data from the shift register to the latch occurs when the $\overline{LE}$ (latch enable) input is high. The data in the latch is stored when $\overline{LE}$ is low.

Absolute Maximum Ratings¹

Supply voltage, V_{DD} ²	-0.5V to +7V
Output voltage, V_{PP} ²	V_{DD} to +90V
Logic input levels ²	-0.5V to $V_{DD} + 0.5V$
Ground current ³	1.5A
Continuous total power dissipation ⁴	1200mW
Operating temperature range	-40°C to +85°C
Storage temperature range	-65°C to +150°C
Lead temperature 1.6mm (1/16 inch) from case for 10 seconds	260°C

Notes:

1. Device will survive (but operation may not be specified or guaranteed) at these extremes.
2. All voltages are referenced to GND.
3. Duty cycle is limited by the total power dissipated in the package.
4. For operation above 25°C ambient, derate linearly to 70°C at 12mW/°C.

Notes:

Power-up sequence should be the following:

1. Connect ground.
2. Apply V_{DD} .
3. Set all inputs (Data, CLK, Enable, etc.) to a known state.
4. Apply V_{PP} .

Power-down sequence should be the reverse of the above.

5. The V_{PP} should not drop below V_{DD} or float during operations.
