

REFERENCE DESIGN

IRDCiP2021C-1

International Rectifier • 233 Kansas Street, El Segundo, CA 90245 USA

IRDCiP2021C-1: 500kHz, 40A, Single Output,
Dual Phase Synchronous Buck Converter
Featuring iP2021C and IR3623M

iPOWER™
TECHNOLOGY

Overview

This reference design is capable of delivering a continuous current of 40A, single output without heatsink at an ambient temperature of 45°C and airflow of 200LFM. Fig. 4 – Fig. 16 provide performance graphs, thermal images, and waveforms. Fig. 1 – Fig. 3 are provided to engineers as design references for implementing an IR3623+iP2021C solution.

The components installed on this demoboard were selected based on operation at an input voltage of 12V (+/-10%), a switching frequency of 500kHz (+/-15%), and an output voltage of 1.2V. Major changes from these set points may require optimizing the control loop and/or adjusting the values of input/output filters in order to meet the user's specific application requirements. Refer to iP2021C and IR3623 datasheets for more information.

IRDCiP2021C-1 Recommended Operating Conditions

(refer to the iP2021C datasheet for maximum operating conditions)

Input voltage: 8.5V – 14.5V

Output voltage: 0.8 – 5V

Switching Freq: 500kHz

Output current: This reference design is capable of delivering a continuous current of 40A without heatsink at an ambient temperature of 45°C and airflow of 200LFM.

Demoboard Quick Start Guide

Initial Settings:

VOUT is set to 1.2V, but can be adjusted from 0.8V to 5V by changing the values of R11 and R15 according to the following formula:

$$R11 = R15 = (10k * 0.8) / (VOUT - 0.8)$$

The switching frequency is set to 500kHz, but can be adjusted by changing the value of R26. See Fig. 4 for the relationship between R26 and the switching frequency.

IRDCiP2021C-1

Power Up Procedure:

1. Apply input voltage across VIN and PGND.
2. Apply load across VOUT pads and PGND pads.
3. Toggle the SEQ (SW1) and EN (SW2) switches to the ON position.
4. Adjust load to desired level. See recommendations above.

Description of Test Points and Connectors

1. Jumpers

Jumper	Pin Name	Description
SW1	EN	Board Enable (switch Up = Off, Down = On) - Vin pin on top
SW2	SEQ	Sequence (switch Up = Off, Down = On) - Vin pin on top

2. Test Points/Connectors

Test Point	Pin Name	Description
T1 / T2	VIN / PGND	Vin supply voltage
TP2 / TP28	VIN / PGND	Vin supply voltage sense
T3 / T5 / T7	VOUT1 / PGND / PGND	Channel 1 Output, connect to DC load
TP35 / TP33	VOUT1 / PGND	Channel 1 Output sense
TP21 / TP37	VSW1 / PGND	Channel 1 switch node / PGND test points
TP9	EN1	Channel 1 Enable test point
TP11	PWM1	Channel 1 PWM test point
TP19	CC1	Channel 1 error amplifier output
TP25	FB1	Channel 1 error amplifier non-inverting input
T4 / T6 / T9	VOUT2 / PGND / PGND	Channel 2 Output, connect to DC load
TP36 / TP34	VOUT2 / PGND	Channel 2 Output sense
TP22 / TP38	VSW2 / PGND	Channel 2 switch node / PGND test points
TP10	EN2	Channel 2 Enable test point
TP12	PWM2	Channel 2 PWM test point
TP20	CC2	Channel 2 error amplifier output
TP26	FB2	Channel 2 error amplifier non-inverting input
TP7 / TP8	VDD / PGND	Supply voltage for IRU3623 and iPOWIR module
TP23	SYNC	External frequency synchronization input
TP17	TRACK1	Channel 1 tracking input, pull-up to Vout3 if not used
TP18	TRACK2	Track2 test point
TP15	PGOOD1	Channel 1 Power good test point
TP16	PGOOD2	Channel 2 Power good test point
TP13	SS1	Channel 1 Soft start test point
TP14	SS2	Channel 2 Soft start test point
TP24	FAULT	Fault monitor test point

3. Test points for Efficiency Measurement

Test Point	Pin Name	Description
TP1 / TP4	+VINS1 / -VOUTS1	Channel 1 Vin sense for efficiency measurement
TP3 / TP4	+VOUTS1 / -VOUTS1	Channel 1 Output sense for efficiency measurement
TP27 / TP6	+VINS2 / -VOUTS2	Channel 2 Vin sense for efficiency measurement
TP5 / TP6	+VOUTS2 / -VOUTS2	Channel 2 Output sense for efficiency measurement

Current Sharing Accuracy

The accuracy of current sharing is tested by measuring the DC voltage across the two inductors at the following operating conditions: $V_{IN} = 12V$; $V_{OUT} = 1.2V$; $I_{out} = 10 - 40A$. The test results are shown below:

Table 1 Inductor DC Voltages at Different Currents for Single Output Configuration

I_{out} (A)	V_{L1} (mV)	V_{L2} (mV)
10	1.5	1.9
20	3.4	3.8
30	5.5	5.8
40	7.5	7.9

Fig. 16 Thermal Image: $I_{out} = 40A$, $V_{IN} = 12V$, $V_{OUT} = 1.2V$, $T_A = 45^\circ C$, $f_{sw} = 500kHz$, 200LFM, No Heatsink, Maximum IC Temperature = $94.2^\circ C$

Refer to the following application notes for detailed guidelines and suggestions when implementing iPOWIR Technology products:

AN-1043: Stabilize the Buck Converter with Transconductance Amplifier

This paper explains how to design the voltage compensation network for Buck Converters with Transconductance Amplifier. The design methods and equations for Type II and Type III compensation are given.

AN-1028: Recommended Design, Integration and Rework Guidelines for International Rectifier's iPowIR Technology BGA and LGA and Packages

This paper discusses optimization of the layout design for mounting iPowIR BGA and LGA packages on printed circuit boards, accounting for thermal and electrical performance and assembly considerations. Topics discussed include PCB layout placement, and via interconnect suggestions, as well as soldering, pick and place, reflow, inspection, cleaning and reworking recommendations.

AN-1030: Applying iPOWIR Products in Your Thermal Environment

This paper explains how to use the Power Loss and SOA curves in the data sheet to validate if the operating conditions and thermal environment are within the Safe Operating Area of the iPOWIR product.

AN-1047: Graphical solution for two branch heatsinking Safe Operating Area

Detailed explanation of the dual axis SOA graph and how it is derived.

Use of this design for any application should be fully verified by the customer.
