

Am102/202/302

Voltage Follower

Distinctive Characteristics

- The Am102/202/302 are functionally, electrically, and pin-for-pin equivalent to the National LM102/202/302
- Slew rate: 20V/ μ s
- Small signal bandwidth: 20MHz
- Input current: 100nA max. over temperature
- Supply voltage range: ± 5.0 V to ± 18 V
- 100% reliability assurance testing in compliance with MIL-STD-883
- Electrically tested and optically inspected dice for hybrid manufacturers
- Available in metal can, hermetic dual-in-line or hermetic flat packages

FUNCTIONAL DESCRIPTION

The Am102/202/302 is a monolithic Operational Amplifier internally connected as a unity gain non-inverting amplifier. This circuit is ideal for such applications as fast sample and hold circuits, active filters, or as a general purpose buffer. Super-beta transistors are used allowing the devices to operate at very low input currents without sacrificing speed. It may be used to replace conventional op amps such as 101 and the 741 in voltage follower applications, where lower offset voltage, drift, bias current, noise, plus higher speed and a wider operating voltage range is desirable.

Average Temperature Coefficient of Input Offset Voltage	$0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$		20					μV/°C
	$-55^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$					6.0		μV/°C
	$+85^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$					12		μV/°C

- Notes:** 1. Derate Metal Can package 6.8mW/°C for operation at ambient temperatures above 75°C, the Dual-In-Line at 9.0mW/°C for operation at ambient temperatures above 95°C, and the Flat Packages at 5.4mW/°C for operation at ambient temperatures above 57°C.
2. For supply voltages less than ±15V, the maximum input voltage is equal to the supply voltage.
3. To prevent damage when the output is shorted, it is necessary to insert a resistor larger than 2.0kΩ in series with the input. Continuous short circuit is allowed for case temperatures to +125°C and ambient temperatures to +70°C for the 102/202. For 302, the corresponding temperatures are +70°C and +55°C respectively.
4. Unless otherwise specified, these specifications apply for supply voltages from ±5.0V to ±18V.
5. Greater output voltage swing can be obtained by connecting a resistor from booster terminal to V_{CC} .
