

300 mA very low dropout linear regulator IC

Datasheet - production data

Features

- Input voltage from 1.5 to 5.5 V
- Ultra low dropout voltage (135 mV typ. at 300 mA load)
- Very low quiescent current (28 μ A typ. at no load, 0.03 μ A typ. in off mode)
- Internal current fold-back
- Output voltage tolerance: $\pm 1\%$ @ 25 °C
- 300 mA guaranteed output current
- High PSRR: 75 dB@1 kHz
- Wide range of output voltages available on request: from 0.8 V up to 5.0 V in 50 mV step
- Logic-controlled electronic shutdown
- Internal soft-start
- Optional output voltage discharge feature
- Compatible with ceramic capacitor
 $C_{OUT} = 0.47\ \mu$ F
- Thermal protection
- Available in DFN4 1x1
- Operating temperature range:
-40 °C to 125 °C

Description

The LD59030 high accuracy voltage regulator provides 300 mA of maximum current from an input voltage ranging from 1.5 V to 5.5 V, with a typical dropout voltage of 135 mV at $V_{OUT} = 3.3$ V.

It is available in DFN4 1x1 package, allowing the maximum space saving.

The device works with a ceramic capacitor on the output. The ultra-low drop voltage, low quiescent current and low noise features, together with the internal soft-start circuit and output current fold-back protection, make the LD59030 suitable for low power battery-operated applications.

An enable logic control function puts the LD59030 in shutdown mode allowing a total current consumption lower than 0.03 μ A.

4 Maximum ratings

Table 2: Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{IN}	Input voltage	- 0.3 to 7	V
V_{OUT}	Output voltage	- 0.3 to $V_{IN} + 0.3$	V
V_{EN}	Enable input voltage	- 0.3 to 7	V
I_{OUT}	Output current	Internally limited	mA
P_D	Power dissipation	Internally limited	mW
T_{STG}	Storage temperature range	- 40 to 150	°C
T_{OP}	Operating junction temperature range	- 40 to 125	°C

Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. All values are referred to GND.

Table 3: Thermal data

Symbol	Parameter	Value	Unit
R_{thJA}	Thermal resistance junction-ambient	140	°C/W

Table 4: ESD Performance

Symbol	Parameter	Test conditions	Value	Unit
ESD	ESD Protection voltage	HBM	2	kV
		CDM	500	V

5 Electrical characteristics

$T_J = 25\text{ }^{\circ}\text{C}$, $V_{IN} = V_{OUT(NOM)} + 1\text{ V}$, $C_{IN} = C_{OUT} = 1\text{ }\mu\text{F}$, $I_{OUT} = 1\text{ mA}$, $V_{EN} = V_{IN}$, unless otherwise specified.

V_{EN}	Enable input logic low	$V_{IN} = 1.5\text{ V to } 5.5\text{ V}$ $-40\text{ }^{\circ}\text{C} < T_J < 85\text{ }^{\circ}\text{C}$			0.4	V
	Enable input logic high	$V_{IN} = 1.5\text{ V to } 5.5\text{ V}$ $-40\text{ }^{\circ}\text{C} < T_J < 85\text{ }^{\circ}\text{C}$	1			
I_{EN}	Enable pin input current	$V_{EN} = V_{IN}$			100	nA
T_{ON} ⁽²⁾	Turn on time			145		μs

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
T _{SHDN}	Thermal shutdown			160		°C
	Hysteresis			20		
C _{OUT}	Output capacitor	Capacitance (see Figure 15: "Stability area vs. (C_{OUT}, ESR)")	0.47		22	μF

Notes:

⁽¹⁾Not applicable for V_{OUT(NOM)} > 4.5 V

⁽²⁾Turn-on time is time measured between the enable input just exceeding V_{EN} high value and the output voltage just reaching 95 % of its nominal value

6 Application information

6.1 Soft start function

The LD59030 has an internal soft start circuit. By increasing the startup time up to 145 μ s, without the need of any external soft start capacitor, this feature is able to keep the regulator inrush current at startup under control.

6.2 Output discharge function

The LD59030 integrates a MOSFET connected between V_{OUT} and GND. This transistor is activated when the EN pin goes to low logic level and has the function to quickly discharge the output capacitor when the device is disabled by the user.

The device is available with or without auto-discharge feature.

See [Section 9: "Ordering information"](#) for more details.

6.3 Dropout voltage

Table 6: Dropout voltage at $I_{OUT} = 300$ mA

Output voltage [V]	Typical value [mV] $T_J = 25^\circ\text{C}$	Max value [mV] $-40^\circ\text{C} < T_J < 85^\circ\text{C}$
1.05	400	550
1.2	330	490
1.5	260	390
1.85	180 ⁽¹⁾	210 ⁽¹⁾
2.5	165	253
2.8	155	230
3.0	145	220
3.1	140	210
3.3	135	200

Notes:

⁽¹⁾Measured value.

6.4 Input and output capacitors

The LD59030 requires external capacitors to assure the regulator control loop stability.

Any good quality ceramic capacitor can be used but, the X5R and the X7R are suggested since they guarantee a very stable combination of capacitance and ESR over the whole temperature range.

Locating the input/output capacitors as close as possible to the relative pins is recommended.

The LD59030 requires an input capacitor with a minimum value of 1 μF . This capacitor must be located as close as possible to the input pin of the device and returned to a clean analog ground.

The control loop of the LD59030 is designed to work with an output ceramic capacitor.

This capacitor must meet the requirements of minimum capacitance and equivalent series resistance (ESR), as shown in [Figure 15: "Stability area vs. \(C_{OUT}, ESR\)"](#). To assure stability, the output capacitor must maintain its ESR and capacitance in the stable region, over the full operating temperature range.

In order to keep stability in all operating conditions (temperature, input voltage and load variations), a minimum output capacitor of 0.47 μF is recommended.

The suggested combination of 1 μF input and output capacitors offers a good compromise among the stability of the regulator, optimum transient response and total PCB area occupation.
