Description

Littelfuse's LSP05G European version thermally protected Surge Protective Device is a self-protected device specially designed to be used in outdoor and commercial LED lighting fixtures for transient overvoltage protection. It has been developed with Littelfuse's thermally protected varistor technology. Its built-in thermal disconnect function provides additional protection to prevent catastrophic failure and fire hazard even under extreme circumstances of varistor end-oflife or sustained over-voltage conditions. It also provides high line-to-earth/ground resistance, facilitating faster production line testing.

LSP05G series connected option allows clear indication of thermal fault protection by disconnecting power to the luminaire, thereby signaling SPD module replacement. The LSP05G Surge Protective Device facilitates product compliance to IEEE C62.41.2 Location Category C Low.

Notes:

- It is normal practice to disconnect components that intentionally breakdown between Line and Protective Earth, otherwise the apparent leakage current measured by the Hi-Pot tester may incorrectly be judged a "failure."
- Maximum Discharge Current I_{max} (A): The maximum discharge current is a measure of the SPDs maximum capability; single impulse of discharge current uses the 8/20µs current waveform. All Devices pass maximum discharge current with possible, safe opening of thermal disconnect.

Application/Installation Schematic

3. Caution: Line/neutral wires must be correctly connected to AC power grid. Wiring error on line/neutral polarity may cause module failure.

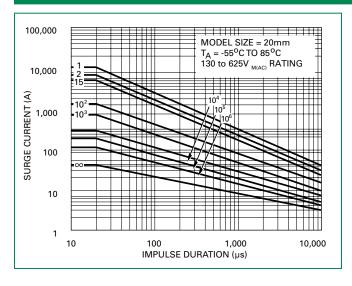

- 1. Series module used in parallel connection for indication circuit connection.
- 2. LED indicator and associated circuitry are not included in the module.
- 3. Brown wire is AC line voltage (hot); blue wire is AC neutral voltage.
- 4. Brown wire voltage is cut off when SPD needs replacement.
- 5. R is current limiting resistor; it resistance/wattage is determined by AC line voltage and desired current driving LED. Example: AC line voltage 240V, LED: 1.6mA, resistor:150Kohm/0.5W.
