MC74LCX244

Low-Voltage CMOS Octal Buffer

With 5 V−Tolerant Inputs and Outputs (3−State, Non−Inverting)

The MC74LCX244 is a high performance, non−inverting octal buffer operating from a 2.3 to 5.5 V supply. High impedance TTL compatible inputs significantly reduce current loading to input drivers while TTL compatible outputs offer improved switching noise performance. A V_I specification of 5.5 V allows MC74LCX244 inputs to be safely driven from 5 V devices. The MC74LCX244 is suitable for memory address driving and all TTL level bus oriented transceiver applications.

Current drive capability is 24 mA at the outputs. The Output Enable ($\overline{OE}$) input, when HIGH, disables the output by placing them in a HIGH Z condition.
