Professional Wide Terminal Thin Film Chip Resistors

MCW AT Professional Wide Terminal Resistors are the perfect choice for most fields of modern professional power measurement electronics where reliability, stability, power dissipation, and robust design is of major concern.

Besides extremely high power ratings, the MCW AT is characterized by extraordinary temperature cycling robustness, verified through extensive testing. Typical applications include power electronics in automotive and industrial appliances.

FEATURES

- Rated dissipation P_{85} up to 1 W
- Superior temperature cycling robustness
- Operating temperature up to 175 °C for 1000 h
- AEC-Q200 qualified
- Advanced sulfur resistance verified according to ASTM B 809
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

RoHS COMPLIANT

APPLICATIONS

- Automotive
- Industrial
- High power and high temperature applications
- Replacement for larger case sizes

TECHNICAL SPECIFICATIONS		
DESCRIPTION	**MCW 0406 AT**	**MCW 0612 AT**
Imperial size	0406	0612
Metric size code	RR1016M	RR1632M
Resistance range	1 Ω to 100 kΩ	10 Ω to 100 kΩ
Resistance tolerance	± 0.5 %; ± 1 %	± 0.5 %; ± 1 %
Temperature coefficient	± 25 ppm/K; ± 50 ppm/K	± 25 ppm/K; ± 50 ppm/K
Rated dissipation P_{85} (1)	0.3 W	1.0 W
Operating voltage, $U_{max.}$ AC_{RMS}/DC	50 V	75 V
Permissible film temperature, $\vartheta_{F\ max.}$ (1)	175 °C	175 °C
Operating temperature range (1)	-55 °C to 175 °C	-55 °C to 175 °C
Permissible voltage against ambient (insulation): 1 min; U_{ins}	75 V	100 V

Note

(1) Please refer to APPLICATION INFORMATION, see below.

APPLICATION INFORMATION

When the resistor dissipates power, a temperature rise above the ambient temperature occurs, dependent on the thermal resistance of the assembled resistor together with the printed circuit board. The rated dissipation applies only if the permitted film temperature is not exceeded.

These resistors do not feature a limited lifetime when operated within the permissible limits. However, resistance value drift increasing over operating time may result in exceeding a limit acceptable to the specific application, thereby establishing a functional lifetime.

MAXIMUM RESISTANCE CHANGE AT RATED DISSIPATION				
OPERATION MODE		**STANDARD**	**POWER**	**ADVANCED TEMPERATURE**
Rated dissipation		P_{70}	P_{70}	P_{85}
	MCW 0406 AT	0.2 W	0.25 W	0.3 W
	MCW 0612 AT	0.5 W	0.75 W	1.0 W (1)
Operating temperature range		-55 °C to 125 °C	-55 °C to 155 °C	-55 °C to 175 °C
Permissible film temperature, $\vartheta_{F\ max.}$		125 °C	155 °C	175 °C
Max. resistance change at rated dissipation for resistance range, $\lvert\Delta R/R\rvert$, after:	**MCW 0406 AT**	1 Ω to 100 kΩ	1 Ω to 100 kΩ	1 Ω to 100 kΩ
	MCW 0612 AT	10 Ω to 100 kΩ	10 Ω to 100 kΩ	10 Ω to 100 kΩ
	1000 h	≤ 0.1 %	≤ 0.2 %	≤ 0.4 %
	8000 h	≤ 0.2 %	≤ 0.4 %	-
	225 000 h	≤ 0.6 %	-	-

Notes

- The presented operation modes do not refer to different types of resistors, but actually show examples of different loads, that lead to different film temperatures and different achievable load-life stability (drift) of the resistance value. A suitable low thermal resistance of the circuit board assembly must be safeguarded in order to maintain the film temperature of the resistors within the specified limits. Please consider the application note “Thermal Management in Surface-Mounted Resistor Applications” (www.vishay.com/doc?28844) for information on the general nature of thermal resistance.

(1) Specified power rating requires a thermal resistance R_{th} ≤ 90 K/W of the circuit board assembly.

The resistance value is influenced by the resistance of the terminations. The exact resistance value of the soldered part on the PCB may deviate depending on e.g. solder quantity, pad layout, and soldering method. The resistance value of the unmounted part can be verified for resistors < 10 Ω by a 4-point probe on the top side terminations as shown below.

DESCRIPTION

Production is strictly controlled and follows an extensive set of instructions established for reproducibility. A homogeneous film of special metal alloy is deposited on a high grade ceramic substrate (Al_2O_3) and conditioned to achieve the desired temperature coefficient. Specially designed inner contacts are deposited on both sides. A special laser is used to achieve the target value by smoothly cutting a meander groove in the resistive layer without damaging the ceramics. The resistor elements are covered by a unique protective coating designed for electrical, mechanical and climatic protection. The terminations receive a final pure matte tin on nickel plating.

The result of the determined production is verified by an extensive testing procedure and optical inspection performed on 100 % of the individual chip resistors. This includes full screening for the elimination of products with potential risk of early field failures (feasible for $R \geq 10\ \Omega$). Only accepted products are laid directly into the paper tape in accordance with **IEC 60286-3 Type 1a** [(1)].

ASSEMBLY

The resistors are suitable for processing on automatic SMD assembly systems. They are suitable for automatic soldering using reflow or vapor phase as shown in **IEC 61760-1** [(1)].

The encapsulation is resistant to all cleaning solvents commonly used in the electronics industry, including alcohols, esters and aqueous solutions. The suitability of conformal coatings, potting compounds and their processes, if applied, shall be qualified by appropriate means to ensure the long-term stability of the whole system.

The resistors are RoHS compliant; the pure matte tin plating provides compatibility with lead (Pb)-free and lead-containing soldering processes. Solderability is specified for 2 years after production or requalification. The permitted storage time is 20 years. The immunity of the plating against tin whisker growth has been proven under extensive testing.

MATERIALS

Vishay acknowledges the following systems for the regulation of hazardous substances:

- IEC 62474, Material Declaration for Products of and for the Electrotechnical Industry, with the list of declarable substances given therein [(2)]
- The Global Automotive Declarable Substance List (GADSL) [(3)]
- The REACH regulation (1907/2006/EC) and the related list of substances with very high concern (SVHC) [(4)] for its supply chain.

The products do not contain any of the banned substances as per IEC 62474, GADSL, or the SVHC list, see www.vishay.com/how/leadfree.

Hence the products fully comply with the following directives:

- 2000/53/EC End-of-Life Vehicle Directive (ELV) and Annex II (ELV II)
- 2011/65/EU Restriction of the Use of Hazardous Substances Directive (RoHS) with amendment 2015/863/EU
- 2012/19/EU Waste Electrical and Electronic Equipment Directive (WEEE)

Vishay pursues the elimination of conflict minerals from its supply chain, see the Conflict Minerals Policy at www.vishay.com/doc?49037.

APPROVALS

Where applicable the resistors are tested within the IECQ-CECC Quality Assessment System for Electronic Components to the detail specification **EN 140401-801** which refers to **EN 60115-1**, **EN 60115-8** and the variety of environmental test procedures of the **IEC 60068** [(1)] series. The detail specification refers to the climatic categories 55/125/56, which relates to the “standard operation mode” of this datasheet. The MCW AT Professional is AEC-Q200 qualified.

Vishay Beyschlag has achieved **“Approval of Manufacturer”** in accordance with **IECQ 03-1**. The release certificate for **“Technology Approval Schedule”** in accordance with **CECC 240001** based on **IECQ 03-3-1** is granted for the Vishay BEYSCHLAG manufacturing process.

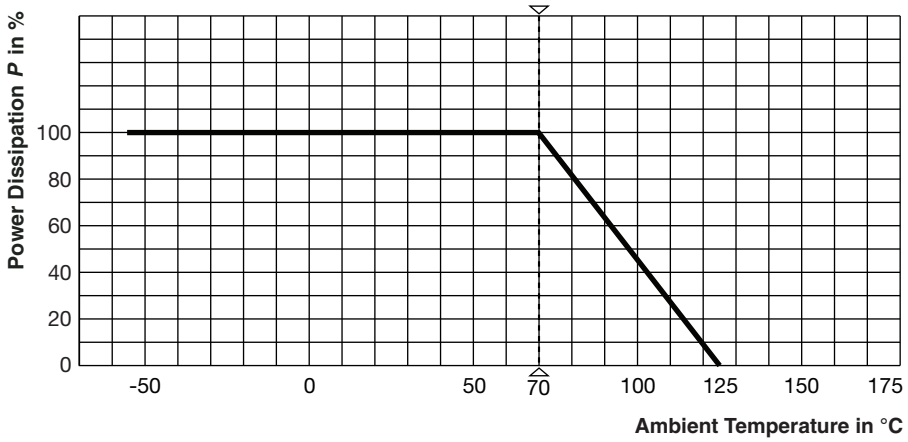
Notes

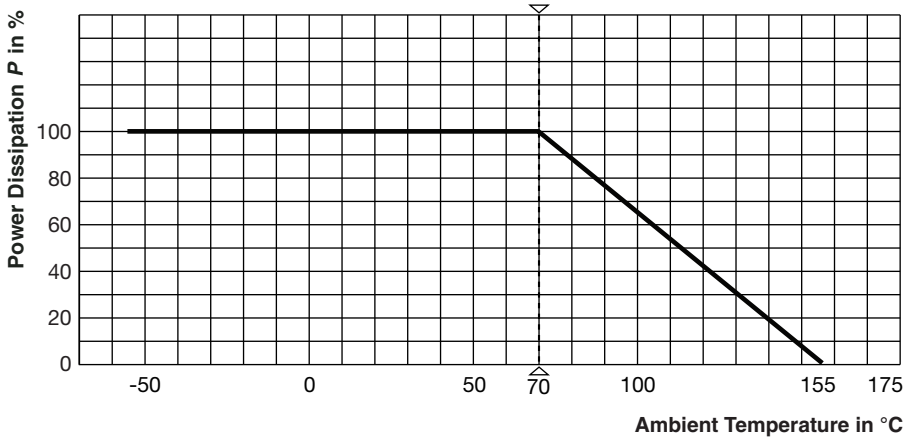
(1) The quoted IEC standards are also released as EN standards with the same number and identical contents.
(2) The IEC 62474 list of declarable substances is maintained in a dedicated database, which is available at http://std.iec.ch/iec62474.
(3) The Global Automotive Declarable Substance List (GADSL) is maintained by the American Chemistry Council and available at www.gadsl.org.
(4) The SVHC list is maintained by the European Chemical Agency (ECHA) and available at http://echa.europa.eu/candidate-list-table.

FUNCTIONAL PERFORMANCE

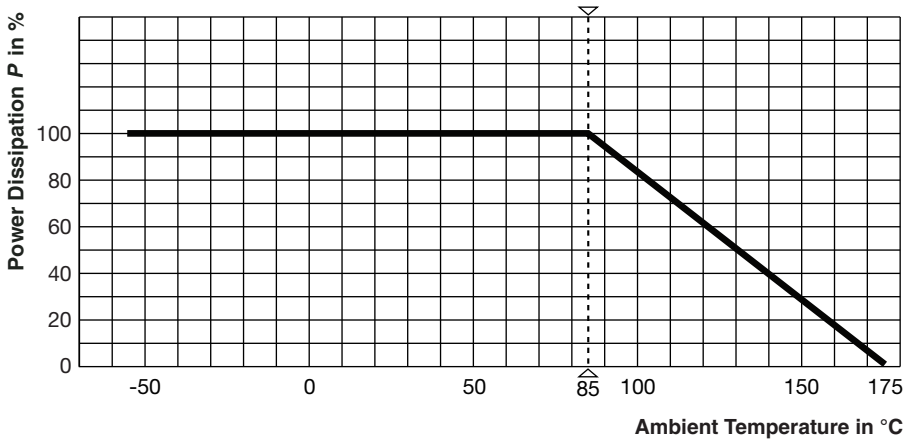
Derating - Standard Mode



Derating - Power Mode

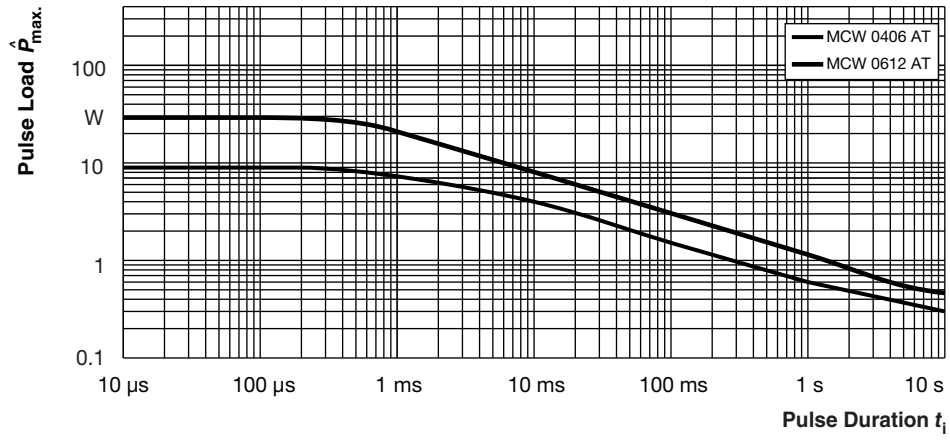


Derating - Advanced Temperature Mode



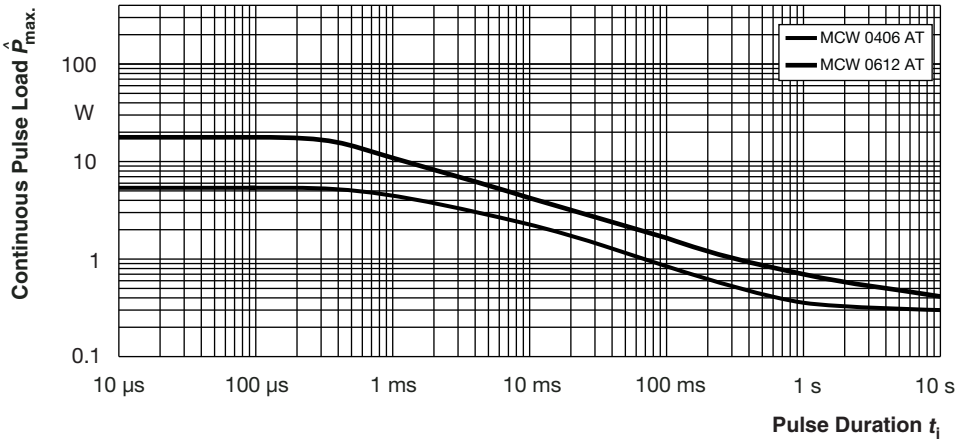
For the permissible resistance change in each operation mode please refer to table MAXIMUM RESISTANCE CHANGE AT RATED DISSIPATION, above

Single Pulse



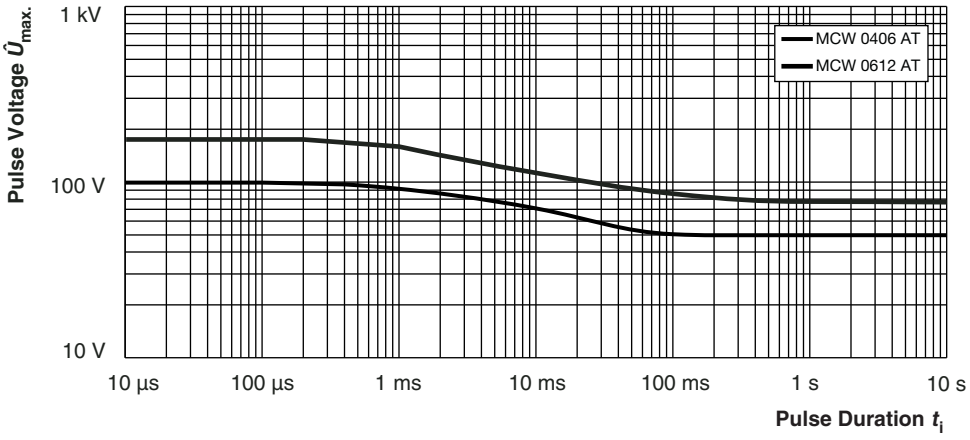
Maximum pulse load, single pulse; applicable if $\bar{P} \rightarrow 0$ and n ≤ 1000 and $\hat{U} \leq \hat{U}_{max.}$;
for permissible resistance change ± (0.25 % R + 0.05 Ω)

Continuous Pulse



Maximum pulse load, continuous pulses; applicable if $\bar{P} \leq P(\vartheta_{amb})$ and $\hat{U} \leq \hat{U}_{max.}$;
for permissible resistance change ± (0.25 % R + 0.05 Ω)

Pulse Voltage



Maximum pulse voltage, single and continuous pulses; applicable if $\hat{P} \leq \hat{P}_{max.}$;
for permissible resistance change ± (0.25 % R + 0.05 Ω)

TESTS AND REQUIREMENTS

All tests are carried out in accordance with the following specifications:

EN 60115-1, generic specification

EN 60115-8 (successor of EN 140400), sectional specification

EN 140401-801, detail specification

IEC 60068-2-xx, test methods

The parameters stated in the Test Procedures and Requirements table are based on the required tests and permitted limits of EN 140401-801.The table presents only the most important tests, for the full test schedule refer to the documents listed above. However, some additional tests and a number of improvements against those minimum requirements have been included.

The testing also covers most of the requirements specified by EIA/ECA-703 and JIS-C-5201-1.

The tests are carried out under standard atmospheric conditions in accordance with IEC 60068-1, 4.3, whereupon the following values are applied:

Temperature: 15 °C to 35 °C

Relative humidity: 25 % to 75 %

Air pressure: 86 kPa to 106 kPa (860 mbar to 1060 mbar).

A climatic category LCT / UCT / 56 is applied, defined by the lower category temperature (LCT), the upper category temperature (UCT), and the duration of exposure in the damp heat, steady state test (56 days).

The components are mounted for testing on printed circuit boards in accordance with EN 60115-8, 2.4.2, unless otherwise specified.

TEST PROCEDURES AND REQUIREMENTS
