Description:

The OPV315AT is a high performance 850nm VCSEL packaged for high speed communication links. OPV315AT combines all the performance advantages of a VCSEL with the addition of a power monitor diode for precise control of optical power.

The OPV314YBT is identical electrically and optically and differ only in pin out. Refer to mechanical drawings for details.

This product's combination of features including high speed, high output power and concentric beam makes it an ideal transmitter for integration into all types of data communications equipment.

Applications:

- Fiber channel
- Gigabit Ethernet
- ATM
- VSR (very short reach)
- Intra-system links applications
- Optical backplane interconnects

Absolute Maximum Ratings ($T_A = 25^\circ \text{C}$ unless otherwise noted)

Storage Temperature	-40°C to $+125^\circ \text{C}$
Operating Temperature	0°C to $+85^\circ \text{C}$
Soldering Lead Temperature	260°C for 10 Seconds
Maximum Forward Peak Current, Continuous	12 mA
Maximum Reverse Voltage	5 V
Maximum Forward Current, pulsed 1 μs P.W., 10% D.C.)	48mA

Additional laser safety information can be found on the Optek website. See application #221. Classification is not marked on the device due to space limitations. See package outline for center-line of optical radiance. Operating devices beyond maximum rating may cause devices to exceed rated classification
