

Si52212/Si52208/Si52204/Si52202 Data Sheet

12/8/4/2-Output PCI-Express Gen 1/2/3/4 and SRIS Clock Generator

The Si522xx is the industry's highest performance and lowest power PCI Express clock generator family for 1.5–1.8 V PCIe Gen1/2/3/4 and SRIS applications. The Si52212, Si52208, and Si52204 can source twelve, eight, and four 100 MHz PCIe differential clock outputs, respectively, plus one 25 MHz LVCMOS reference clock output. The Si52202 can source two 100 MHz PCIe clock outputs only. All differential clock outputs are compliant to PCIe Gen1/2/3/4 common clock and separate reference clock architectures specifications.

The Si522xx features individual hardware control pins for enabling and disabling each output, spread spectrum enable/disable for EMI reduction, and frequency select to select 133 MHz or 200 MHz differential output frequencies. These features can also be controlled via I²C.

The small footprint and low power consumption make this family of PCIe clock generators ideal for industrial and consumer applications.

For more information about PCI-Express, Silicon Labs' complete PCIe portfolio, application notes, and design tools, including the Silicon Labs PCIe Clock Jitter Tool for PCI-Express compliance, please visit <http://www.silabs.com/pcie-learningcenter>.

Applications

- Servers
- Storage
- Data Centers
- PCIe Add-on Cards
- Network Interface Cards (NIC)
- Graphics Adapter Cards
- Multi-function Printers
- Digital Single-Lens Reflex (DSLR) Cameras
- Digital Still Cameras
- Digital Video Cameras
- Docking Stations

KEY FEATURES OR KEY POINTS

- 12/8/4/2-output low-power, push-pull HCSL compatible PCI-Express Gen 1, Gen 2, Gen 3, Gen 4 and SRIS-compliant outputs
- Low jitter: 0.4 ps max
- Individual hardware control pins and I²C controls for Output Enable, Spread Spectrum Enable and Frequency Select
- Triangular spread spectrum for EMI reduction, down spread 0.25% or 0.5%
- Internal 100 Ω or 85 Ω line matching
- Adjustable output slew rate
- Power down (PWRDNb) function supports Wake-on LAN (except Si52202)
- One non-spread, LVCMOS reference clock output (except Si52202)
- Frequency Select to select 133 MHz or 200 MHz (except Si52202)
- 25 MHz crystal input or clock input
- I²C support with readback capabilities
- Extended temperature: –40 to 85 °C
- 1.5–1.8 V power supply, with separate VDD and VDD_IO
- Small QFN packages
- Pb-free, RoHS-6 compliant

1. Feature List

- 12/8/4/2-output 100 MHz PCIe Gen1/2/3/4 and SRIS compliant clock generator, with push-pull HCSL output drivers
 - High port count with push-pull HCSL outputs to support highly integrated solution, eliminating external resistors for the HCSL output drivers
- Low jitter of 0.4 ps max to meet PCIe Gen4 specifications with design margin
- Low power consumption.
 - Lowest power consumption in the industry for a 2-output PCIe clock generator
- Individual hardware control pins and I²C controls for Output Enable, Spread Spectrum Enable and Frequency Select
 - Output Enable function easily disables unused outputs for power saving
 - Spread Enable function to turn on/off spread spectrum and to select spread levels, either down spread 0.25% or 0.5%
 - Frequency Select function to select output frequency of 100 MHz, 133 MHz, or 200 MHz (except Si52202 where the output frequency is limited to 100 MHz. Please contact Silicon Labs for 133 MHz or 200 MHz in Si52202)
 - All above functions are controlled by individual hardware pins or I²C
- Internal 100 Ω or 85 Ω line matching
 - Eliminates external line matching resistor to reduce board space
- Adjustable slew rate to improve signal quality for different applications and board designs
- Power down (PWRDNb) function supports Wake-on LAN (except Si52202)
- One non-spread, 25 MHz LVCMOS reference clock output (except Si52202)
 - A buffered 25 MHz LVCMOS clock output to drive ASICS or SoCs on board
- 25 MHz reference input
 - Supports a standard crystal or clock input for flexibility
- I²C support with readback capabilities
- 1.5–1.8 V power supply with separate VDD and VDD_IO
- Temperature range: –40 °C to 85 °C
- Small QFN packages to optimize board space. Smallest 2-output PCIe clock generator in the industry
 - 64-pin QFN (9 x 9 mm) : 12-output
 - 48-pin QFN (6 x 6 mm) : 8-output
 - 32-pin QFN (5 x 5 mm) : 4-output
 - 20-pin QFN (3 x 3 mm) : 2-output
- Pb-free, RoHS-6 compliant

2. Ordering Guide

Table 2.1. Si522x Ordering Guide

Number of Outputs	Internal Termination	Part Number	Package Type	Temperature
12-output	100 Ω	Si52212-A01AGM	64-QFN	Extended, –40 to 85 °C
		Si52212-A01AGMR	64-QFN - Tape and Reel	Extended, –40 to 85 °C
	85 Ω	Si52212-A02AGM	64-QFN	Extended, –40 to 85 °C
		Si52212-A02AGMR	64-QFN - Tape and Reel	Extended, –40 to 85 °C
8-output	100 Ω	Si52208-A01AGM	48-QFN	Extended, –40 to 85 °C
		Si52208-A01AGMR	48-QFN - Tape and Reel	Extended, –40 to 85 °C
	85 Ω	Si52208-A02AGM	48-QFN	Extended, –40 to 85 °C
		Si52208-A02AGMR	48-QFN - Tape and Reel	Extended, –40 to 85 °C
4-output	100 Ω	Si52204-A01AGM	32-QFN	Extended, –40 to 85 °C
		Si52204-A01AGMR	32-QFN - Tape and Reel	Extended, –40 to 85 °C
	85 Ω	Si52204-A02AGM	32-QFN	Extended, –40 to 85 °C
		Si52204-A02AGMR	32-QFN - Tape and Reel	Extended, –40 to 85 °C
2-output	100 Ω	Si52202-A01AGM	20-QFN	Extended, –40 to 85 °C
		Si52202-A01AGMR	20-QFN - Tape and Reel	Extended, –40 to 85 °C
	85 Ω	Si52202-A02AGM	20-QFN	Extended, –40 to 85 °C
		Si52202-A02AGMR	20-QFN - Tape and Reel	Extended, –40 to 85 °C

Dissipation, Junction to Case	θJC	JEDEC (JESD 51)	—	—	22	Celsius/W
Dissipation, Junction to Ambient	θJA	JEDEC (JESD 51)	—	—	30	Celsius/W
ESD Protection (Human Body Model)	ESDHBM	JEDEC (JESD 22-A114)	−2000	—	2000	V
Flammability Rating	UL-94	UL (Class)	V−0			
Note: While using multiple power supplies, the voltage on any input or I/O pin cannot exceed the power pin during power-up. Power supply sequencing is not required.						

5. Functional Description

5.1 Crystal Recommendations

The clock device requires a parallel resonance crystal.

Table 5.1. Crystal Recommendations

Frequency (Fund)	Cut	Loading	Load Cap	Shunt Cap (max)	Motional (max)	Tolerance (max)	Stability (max)	Aging (max)
25 MHz	AT	Parallel	8–15 pF	5 pF	0.016 pF	35 ppm	30 ppm	5 ppm

5.2 Crystal Loading

Crystal loading is critical in achieving low ppm performance. To realize low ppm performance, use the total capacitance the crystal sees to calculate the appropriate capacitive loading (CL).

The figure below shows a typical crystal configuration using the two trim capacitors. It is important that the trim capacitors are in series with the crystal.

Figure 5.1. Crystal Capacitive Clarification

5.3 Calculating Load Capacitors

In addition to the standard external trim capacitors, consider the trace capacitance and pin capacitance to calculate the crystal loading correctly. Again, the capacitance on each side is in series with the crystal. The total capacitance on both sides is twice the specified crystal load capacitance (CL). Trim capacitors are calculated to provide equal capacitive loading on both sides.

Figure 5.2. Crystal Loading Example

Use the following formulas to calculate the trim capacitor values for Ce1 and Ce2:

Load Capacitance (each side)

$$C_e = 2 \times CL - (C_s + C_i)$$

Total Capacitance (as seen by the crystal)

$$CL_e = \frac{1}{\left(\frac{1}{C_e + C_{s1} + C_{i1}} + \frac{1}{C_e + C_{s2} + C_{i2}} \right)}$$

- CL: Crystal load capacitance
- CL_e: Actual loading seen by crystal using standard value trim capacitors
- C_e: External trim capacitors
- C_s: Stray capacitance (terraced)
- C_i : Internal capacitance (lead frame, bond wires, etc.)

5.4 PWRGD/PWRDNb (Power Down) Pin

The PWRGD/PWRDNb pin is a dual-function pin. During initial power up, the pin functions as the PWRGD pin. Upon the first power up, if the PWRGD pin is low, the outputs will be disabled, but the crystal oscillator and I²C logics will be active. Once the PWRGD pin has been sampled high by the clock chip, the pin assumes a PWRDNb functionality. When the pin has assumed a PWRDNb functionality and is pulled low, the device will be placed in power down mode. The PWRGD/PWRDNb pin is required to be driven at all times. The assertion and deassertion of PWRDNb is asynchronous.

Figure 5.3. Differential (CLOCK–CLOCK) Measurement Points (Tperiod, Duty Cycle, Jitter)

5.5 PWRDNb (Power Down) Assertion

The PDB pin is an asynchronous active low input used to disable all output clocks in a glitch-free manner. All outputs will be driven low in power down mode. In power down mode, all outputs, the crystal oscillator, and the I²C logic are disabled.

Figure 5.4. PWRDNb Assertion

5.6 PWRDNb (Power Down) Deassertion

When a valid rising edge on PWRGD/PWRDNb pin is applied, all outputs are enabled in a glitch-free manner within two to six output clock cycles.

5.7 OEB Pin

The OEB pin is an active low input used to enable and disable the output clock. To enable the output clock, the OEB pin needs to be logic low, and I²C OE bit needs to be logic high. By default, the OEB pin is set to logic low, and I²C OE bit is set to logic high. There are two methods to disable the output clock: the OEB pin is pulled to a logic high, or the I²C OEB bit is set to a logic low. The OEB pin is required to be driven at all times.

5.8 OEB Assertion

The OEB pin is an active low input used for synchronous stopping and starting the respective output clock while the rest of the clock generator continues to function. The assertion of the OEB function is achieved by pulling the OEB pin low while the I²C OE bit is high, which causes the respective stopped output to resume normal operation. No short or stretched clock pulses are produced when the clocks resume. The maximum latency from the assertion to active outputs is no more than two to six output clock cycles.

5.9 OEB Deassertion

The OEB function is deasserted by pulling high or writing the I²C OE bit to a logic low. The corresponding output is stopped cleanly and the final output state is driven low.

5.10 FS Pin

The FS pin will select 0 = 100 MHz, mid = 200 MHz, 1 = 133 MHz. This is a tri-state pin, and this pin has a weak internal pull-down of approximately 100 k Ω .

The default output frequency is 100 MHz.

The following figure shows the recommended configurations for tri-state.

Figure 5.5. Si522xx FS Tri-State Pin Circuit Configuration Suggestions

6. Test and Measurement Setup

The following diagrams show the test load configuration for the differential clock signals.

Figure 6.1. 0.7 V Differential Load Configuration

Figure 6.2. Differential Output Signals (for AC Parameters Measurement)

Figure 6.3. Single-ended Measurement for Differential Output Signals (for AC Parameters Measurement)

7. PCIe Clock Jitter Tool

The PCIe Clock Jitter Tool is designed to enable users to quickly and easily take jitter measurements for PCIe Gen1/2/3/4 and SRNS/SRIS. This software removes all the guesswork for PCIe Gen1/2/3/4 and SRNS/SRIS jitter measurements and margins in board designs. This software tool will provide accurate results in just a few clicks, and is provided in an executable format to support various common input waveform files, such as .csv, .wfm, and .bin. The easy-to-use GUI and helpful tips guide users through each step. Release notes and other documentation are also included in the software package.

Download it for free at <http://www.silabs.com/pcie-learningcenter>.

Figure 7.1. PCIe Clock Jitter Tool

8. Control Registers

8.1 I²C Interface

To enhance the flexibility and function of the clock synthesizer, an I²C interface is provided. Through the I²C interface, various device functions, such as individual clock output buffers, are individually enabled or disabled. The registers associated with the I²C interface initialize to their default setting at power-up. The use of this interface is optional. Clock device register changes are normally made at system initialization, if any are required.

8.2 Block Read/Write

The clock driver I²C protocol accepts block write and block read operations from the controller. For block write/read operation, access the bytes in sequential order from lowest to highest (most significant bit first) with the ability to stop after any complete byte is transferred. The block write and block read protocol is outlined in [Table 8.2 Block Read and Block Write Protocol on page 29](#).

8.3 Block Read

After the slave address is sent with the R/W condition bit set, the command byte is sent with the MSB = 0. The slave acknowledges the register index in the command byte. The master sends a repeat start function. After the slave acknowledges this, the slave sends the number of bytes it wants to transfer (>0 and <33). The master acknowledges each byte except the last and sends a stop function.

Figure 8.1. Block Read Protocol

8.4 Block Write

After the slave address is sent with the R/W condition bit not set, the command byte is sent with the MSB = 0. The lower seven bits indicate the register at which to start the transfer. If the command byte is 00h, the slave device will be compatible with existing block mode slave devices. The next byte of a write must be the count of bytes that the master will transfer to the slave device. The byte count must be greater than zero and less than 33. Following this byte are the data bytes to be transferred to the slave device. The slave device always acknowledges each byte received. The transfer is terminated after the slave sends the Ack and the master sends a stop function.

Figure 8.2. Block Write Protocol

8.5 Byte Read/Write

Reading or writing a register in an SMBus slave device in byte mode always involves specifying the register number. Refer to [Table 8.3 Byte Read and Byte Write Protocol on page 30](#) for byte read and byte write protocol.

8.6 Byte Read

The standard byte read is as shown in the figure below. It is an extension of the byte write. The write start condition is repeated; then, the slave device starts sending data, and the master acknowledges it until the last byte is sent. The master terminates the transfer with a NAK, then a stop condition. For byte operation, the MSB bit of the command byte must be set. For block operations, the MSB bit must be reset. If the bit is not set, the next byte must be the byte transfer count.

Figure 8.3. Byte Read Protocol

8.7 Byte Write

The figure below illustrates a simple, typical byte write. For byte operation, the MSB bit of the command byte must be set. For block operations, the MSB bit must be reset. If the bit is not set, the next byte must be the byte transfer count. The count can be between 1 and 32. It is not allowed to be zero or to exceed 32.

Figure 8.4. Byte Write Protocol

8.8 Data Protocol

The clock driver I²C protocol accepts byte write, byte read, block write, and block read operations from the controller. For block write/read operation, access the bytes in sequential order from lowest to highest (most significant bit first) with the ability to stop after any complete byte is transferred. For byte write and byte read operations, the system controller can access individually indexed bytes. The block write and block read protocol is outlined in [Table 8.2 Block Read and Block Write Protocol on page 29](#) while [Table 8.3 Byte Read and Byte Write Protocol on page 30](#) outlines byte write and byte read protocol.

9. Pin Descriptions

9.1 Si52212 Pin Descriptions

Figure 9.1. 64-Pin QFN

Table 9.1. Si52212 64-Pin QFN Descriptions

Pin #	Name	Type	Description
1	VDDA	PWR	Analog Power Supply
2	GNDA	PWR	Analog Ground
3	NC		No connect
4	GND	GND	Ground
5	SS_EN	I	Spread spectrum enable pin. 0 = –0.25% spread, mid= Off, 1= –0.5% spread (This pin has an internal pull-up)
6	PWRGD/ PWRDNb	I, PU	Active low input pin asserts power down (PDb) and disables all outputs, except REF (This pin has an internal pull-up). Refer also to settings of Byte 2, Bit2 and Bit3 for REF. Settings for Bit3 (REF_OE) will take precedence for REF.
7	GND	GND	Ground
8	XIN/CLKIN	I	25.00 MHz crystal input or 25 MHz Clock Input.
9	XOUT	O	25.00 MHz crystal output. Float XOUT if using only CLKIN (Clock input).
10	VDDX	PWR	Power supply for crystal
11	VDDR	PWR	Power supply for REF output
12	REF /SA	O/I	REF = 25MHz LVCMOS output. SA = Address select for I2C. When part is powered up, SA will be latched to select SM bus address. Refer to Table 8.1 SA State on First Application of PWRGD/PWRDNb on page 29 .
13	VSSR	GND	Ground

Pin #	Name	Type	Description
14	SDA	I/O	I ² C compatible SDATA
15	SCLK	I	I ² C compatible SCLOCK
16	FS	I	Frequency select pin. 0 = 100 MHz, mid = 200 MHz, 1 = 133 MHz (This pin has an internal pull-down)
17	DIFF_0	O, DIF	0.7 V, 100 MHz differential clock
18	DIFF_0b	O, DIF	0.7 V, 100 MHz differential clock
19	OE_0b	I, PD	Output enable for DIFF_0 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
20	OE_1b	I, PD	Output enable for DIFF_1 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
21	DIFF_1	O, DIF	0.7 V, 100 MHz differential clock
22	DIFF_1b	O, DIF	0.7 V, 100 MHz differential clock
23	GND	GND	Ground
24	VDD	PWR	Power supply
25	VDD_IO	PWR	Output power supply
26	DIFF_2	O, DIF	0.7 V, 100 MHz differential clock
27	DIFF_2b	O, DIF	0.7 V, 100 MHz differential clock
28	OE_2b	I, PD	Output enable for DIFF_2 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
29	OE_3b	I, PD	Output enable for DIFF_3 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
30	DIFF_3	O, DIF	0.7 V, 100 MHz differential clock
31	DIFF_3b	O, DIF	0.7 V, 100 MHz differential clock
32	VDD_IO	PWR	Output power supply
33	GND	GND	Ground
34	DIFF_4	O, DIF	0.7 V, 100 MHz differential clock
35	DIFF_4b	O, DIF	0.7 V, 100 MHz differential clock
36	OE_4b	I, PD	Output enable for DIFF_4 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
37	OE_5b	I, PD	Output enable for DIFF_5 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
38	DIFF_5	O, DIF	0.7 V, 100 MHz differential clock
39	DIFF_5b	O, DIF	0.7 V, 100 MHz differential clock
40	VDD	PWR	Power supply
41	GND	GND	Ground
42	DIFF_6	O, DIF	0.7 V, 100 MHz differential clock
43	DIFF_6b	O, DIF	0.7 V, 100 MHz differential clock
44	OE_6b	I, PD	Output enable for DIFF_6 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
45	OE_7b	I, PD	Output enable for DIFF_7 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs

Pin #	Name	Type	Description
46	DIFF_7	O, DIF	0.7 V, 100 MHz differential clock
47	DIFF_7b	O, DIF	0.7 V, 100 MHz differential clock
48	GND	GND	Ground
49	VDD_IO	PWR	Output power supply
50	DIFF_8	O, DIF	0.7 V, 100 MHz differential clock
51	DIFF_8b	O, DIF	0.7 V, 100 MHz differential clock
52	OE_8b	I, PD	Output enable for DIFF_8 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
53	OE_9b	I, PD	Output enable for DIFF_9 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
54	DIFF_9	O, DIF	0.7 V, 100 MHz differential clock
55	DIFF_9b	O, DIF	0.7 V, 100 MHz differential clock
56	VDD_IO	PWR	Output power supply
57	VDD	PWR	Power supply
58	GND	GND	Ground
59	DIFF_10	O, DIF	0.7 V, 100 MHz differential clock
60	DIFF_10b	O, DIF	0.7 V, 100 MHz differential clock
61	OE_10b	I, PD	Output enable for DIFF_10 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
62	OE_11b	I, PD	Output enable for DIFF_11 pair (This pin has an internal pull-down). 0 = Enable outputs; 1 = Disable outputs
63	DIFF_11	O, DIF	0.7 V, 100 MHz differential clock
64	DIFF_11b	O, DIF	0.7 V, 100 MHz differential clock
	GND PAD	GND	Ground pad. This pad provides an electrical and thermal connection to ground and must be connected for proper operation. Use as many vias as practical, and keep the via length to an internal ground plane as short as possible.

9.2 Si52208 Pin Descriptions

Figure 9.2. 48-pin QFN

Pin	Name	Type	Description
1	VDDA	PWR	Analog Power Supply
2	GNDA	PWR	Analog Ground
3	SS_EN	I	Spread spectrum enable pin. 0 = -0.25% spread, mid= Off, 1= -0.5% spread (This pin has an internal pull-up)
4	PWRGD/PWRDNb	I, PU	Active low input pin asserts power down (PDb) and disables all outputs, except REF (This pin has an internal pull-up). Refer also to settings of Byte 2, Bit2 and Bit3 for REF. Settings for Bit3 (REF_OE) will take precedence for REF.

10. Packaging

10.1 Si52212 Package

The figure below illustrates the package details for the Si52212 in a 64-Lead 9 x 9 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.1. 64L 9 x 9 mm QFN Package Diagram

Table 10.1. Package Diagram Dimensions

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05
b	0.18	0.25	0.30
D	9.00 BSC		
D2	5.10	5.20	5.30
e	0.50 BSC		
E	9.00 BSC		
E2	5.10	5.20	5.30
L	0.30	0.40	0.50
aaa	0.15		
bbb	0.10		
ccc	0.08		
ddd	0.10		
eee	0.05		

Dimension	Min	Nom	Max
Note: 1. All dimensions shown are in millimeters (mm) unless otherwise noted. 2. Dimensioning and Tolerancing per ANSI Y14.5M-1994. 3. This drawing conforms to JEDEC Outline MO-220. 4. Recommended card reflow profile is per JEDEC/IPC J-STD-020D specification for Small Body Components.			

10.2 Si52212 Land Pattern

The following figure illustrates the land pattern details for the Si52212 in a 64-Lead 9 x 9 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.2. 64L 9 x 9 mm QFN Land Pattern

Table 10.2. PCB Land Pattern Dimensions

Dimension	mm
C1	8.90
C2	8.90
E	0.50
X1	0.30
Y1	0.85
X2	5.30
Y2	5.30

Notes:**General**

1. All dimensions shown are in millimeters (mm).
2. This Land Pattern Design is based on the IPC-7351 guidelines.
3. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 mm minimum, all the way around the pad.

Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 1:1 for all pads.
4. A 3x3 array of 1.25 mm square openings on a 1.80 mm pitch should be used for the center ground pad.

Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

10.3 Si52208 Package

The figure below illustrates the package details for the Si52208 in a 48-Lead 6 x 6 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.3. 48L 6 x 6 mm QFN Package Diagram

Table 10.3. Package Diagram Dimensions

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05
b	0.15	0.20	0.25
D	6.00 BSC		
D2	3.5	3.6	3.7
e	0.40 BSC		
E	6.00 BSC		
E2	3.5	3.6	3.7
L	0.30	0.40	0.50
aaa	0.10		
bbb	0.10		
ccc	0.10		
ddd	0.05		
eee	0.08		

Dimension	Min	Nom	Max
Note: 1. All dimensions shown are in millimeters (mm) unless otherwise noted. 2. Dimensioning and Tolerancing per ANSI Y14.5M-1994. 3. This drawing conforms to JEDEC Outline MO-220. 4. Recommended card reflow profile is per JEDEC/IPC J-STD-020 specification for Small Body Components.			

10.4 Si52208 Land Pattern

The figure below illustrates the land pattern details for the Si52208 in a 48-Lead, 6 x 6 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.4. 48L 6 x 6 mm QFN Land Pattern

Table 10.4. PCB Land Pattern Dimensions

Dimension	mm
C1	5.90
C2	5.90
X1	0.20
X2	3.60
Y1	0.85
Y2	3.60
e	0.40 BSC

Notes:**General**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on IPC-7351 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 mm minimum, all the way around the pad.

Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads.
4. A 3x3 array of 0.90 mm square openings on 1.15mm pitch should be used for the center ground pad.

Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

10.5 Si52204 Package

The figure below illustrates the package details for the Si52204 in a 32-Lead, 5 x 5 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.5. 32L 5 x 5 mm QFN Package Diagram

Table 10.5. Package Diagram Dimensions

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05

aaa	0.15		
bbb	0.10		
ccc	0.10		
ddd	0.05		
eee	0.08		
fff	0.10		

Note:

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to the JEDEC Solid State Outline MO-220, Variation VKKD-4.
4. Recommended card reflow profile is per JEDEC/IPC J-STD-020 specification for Small Body Components.

10.6 Si52204 Land Pattern

The figure below illustrates the land pattern details for the Si52204 in a 32-Lead, 5 x 5 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.6. 32L 5 x 5 mm QFN Land Pattern

Table 10.6. PCB Land Pattern Dimensions

Dimension	mm
S1	4.01
S	4.01
L1	3.50
W1	3.50
e	0.50
W	0.26
L	0.86

Notes:

General

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. This Land Pattern Design is based on IPC-7351 guidelines.

Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 μ m minimum, all the way around the pad.

Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125mm (5 mils).
3. The ratio of stencil aperture to land pad size can be 1:1 for all perimeter pads.
4. A 3x3 array of 0.85 mm square openings on 1.00 mm pitch can be used for the center ground pad.

Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

10.7 Si52202 Package

The figure below illustrates the package details for the Si52202 in a 20-Lead, 3 x 3 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.7. 20L 3 x 3 mm QFN Package Diagram

Table 10.7. Package Diagram Dimensions

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05

R	0.075	—	0.125
aaa	0.10		
bbb	0.07		
ccc	0.10		
ddd	0.05		
eee	0.08		
fff	0.10		

Note:

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. The drawing complies with JEDEC MO-220.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

10.8 Si52202 Land Pattern

The figure below illustrates the land pattern details for the Si52202 in a 20-Lead, 3 x 3 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.8. 20L 3 x 3 mm QFN Land Pattern

Table 10.8. PCB Land Pattern Dimensions

Dimension	mm
C1	3.10
C2	3.10
X1	0.20
X2	1.90
Y1	0.70
Y2	1.90
e	0.40 BSC

Notes:**General**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on IPC-7351 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 μ m minimum, all the way around the pad.

Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads.
4. A 3x3 array of 0.90 mm square openings on 1.15 mm pitch should be used for the center ground pad.

Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.
