

SL6609A

DIRECT CONVERSION FSK DATA RECEIVER

This device is an advanced direct conversion receiver for operation up to 470MHz. The design is based on the SL6609 receiver and is a pin for pin product upgrade. The device integrates all functions to translate a binary FSK modulated RF signal into a demodulated data stream. Adjacent channel rejection is provided using tuneable gyrator filters. To assist operation in the presence of large interfering signals both RF and audio AGC functions are provided.

The device also includes a 1 volt regulator capable of sourcing up to 5mA, a battery flag and the facility of incorporating a more complex post detection filter off-chip. Both battery flag and data outputs have open collector outputs to ease their interface with other devices.

FEATURES

- Very low power operation - typ 3.0mW
- Single cell operation for most of the device.
Limited functional blocks operating via an inverter
- Superior sensitivity of -130dBm
- Operation at wide range of paging data rates
512, 1200, 2400 baud
- On chip 1 volt regulator
- Small package offering SSOP

APPLICATIONS

- Credit card pagers
- Watch pagers
- Small form factor pagers i.e. PCMCIA
- Low data rate data receivers i.e. Security/remote control

Fig.1 Pin connections

ABSOLUTE MAXIMUM RATINGS

Supply voltage	6V
Storage temperature	-55°C to +150°C
Operating temperature	-20°C to +70°C

ORDERING INFORMATION

ELECTRICAL CHARACTERISTICS

These characteristics are guaranteed over the following conditions unless otherwise stated:

Tamb = 25°C, VCC1 = 1.3V, VCC2 = 2.7V

Characteristics	Pin	Value			Units	Comments
		Min	Typ	Max		
VCC1 - Supply voltage	21	0.95	1.3	2.8	V	VCC1 ≤ VCC2 - 0.7 volts
VCC2 - Supply voltage	13	1.8	2.7	3.5	V	
ICC1 - Supply current	21,27,28		1.5	1.8	mA	Includes IRF. Does not include regulator supply. Audio AGC inactive
ICC2 - Supply current	11,13,14		550	700	µA	Batt flag & Data O/P high
Power down ICC1	21,27,28			1	µA	Pin 27 voltage: 0.3 - 1.3V
Power down ICC2	11,13,14			8	µA	
1 volt regulator	23	0.95	1.0	1.05	V	I Load = 3mA. Ext PNP. β ≥ 100, V _{CE} = 0.1 volt
Band gap voltage reference	19	1.15	1.21	1.27	V	
Band gap current source	19			20	µA	
Voltage reference	6	0.93	1.0	1.07	V	
Voltage reference sink/source	6			10	µA	VCC1 > 1.1V
1 volt regulator load current		0.25	3	5	mA	
Turn on Time			5		ms	Stable data o/p when 3dB above sensitivity. C _{BG} and C _{VR} = 2.2µF
Turn off Time			1		ms	Fall to 10% of steady state current C _{BG} and C _{VR} = 2.2µF
Detector output current	17		+/-4		µA	
RF current source						
Current Source (IRF)	27	400	500	600	µA	Pin 27 voltage: 0.3 - 1.3V
Decoder						
Sensitivity		40			µVrms	Signal injected at TPX and TPY B.E.R. ≤ 1 in 30 5KHz deviation @ 1200 bits/sec BRF capacitor = 1nF
Output mark space ratio	14	7:9		9:7		
Data O/P Sink Current	14	100		500	µA	Output logic low
Data O/P Leakage Current	14			1.0	µA	Output logic high

ELECTRICAL CHARACTERISTICS

These characteristics are guaranteed over the following conditions unless otherwise stated:
 Tamb = 25°C, VCC1 = 1.3V, VCC2 = 2.7V

Characteristics	Pin	Value			Units	Comments
		Min	Typ	Max		
Battery Economy						
Input logic high	10	$(V_{CC2} - 0.3)$		0.3	V	Powered Up
Input logic low	10				V	Powered Down
Input current	10		0.05	1	μ A	Powered Up
Input current	10		6	8	μ A	Powered down transient initial
Battery Flag Input						
Input current	20			1	μ A	
Battery Flag Output						
Battfl Sink Current	11	50		500	μ A	(VBATT-VR) > 20mV
Battfl leakage current	11			1	μ A	(VBATT-VR) < -20mV
Mixers						
Gain to "IF Test"		34		41	dB	LO inputs driven in parallel with 50mVRMS @ 50MHz. IF = 2kHz
RF input impedance	24, 26					See Figs.8a, 8b
LO input impedance	3, 5					See Fig.9
LO DC bias voltage	3, 5				V	Equal to Pin 21 (VCC1)
Audio AGC						
Max Audio AGC Sink Current	28	45	65	85	μ A	

RECEIVER CHARACTERISTICS (GPS Demonstration board)

Measurement conditions unless stated VCC1 = 1.3V, VCC2 = 2.7V, LNA = 18dB Power Gain, 2dB Noise figure,

Carrier frequency 153MHz, BER 1 in 30, Tamb = 25°C

(TPx/TPy typically:- 160mV_{pp} ± 10% for -73dBm RF input to the LNA)

Characteristics	Pin	Value			Units	Comments
		Min	Typ	Max		
Sensitivity		-130	-128	-125	dBm	1200 bps Δf = 4kHz LO = -18dBm
Intermodulation		52	56		dB	1200 bps Δf = 4kHz LO = -18dBm
Adjacent channel		68	73		dB	1200 bps Δf = 4kHz LO = -18dBm Channel spacing 25kHz
Centre frequency acceptance			+/-2.3		kHz	1200 bps Δf = 4kHz LO = -18dBm
Deviation acceptance			+/-2.2		kHz	1200 bps Δf = 4kHz LO = -18dBm

RECEIVER CHARACTERISTICS (GPS Demonstration board)Measurement conditions unless stated $V_{cc1} = 1.3V$, $V_{cc2} = 2.7V$, LNA = 20dB Power Gain, 2dB Noise figure,Carrier frequency 282MHz, BER 1 in 30, $T_{amb} = 25^{\circ}C$ (TPx/TPy typically:- $160mV_{pp} \pm 10\%$ for - 73dBm RF input to the LNA)

Characteristics	Pin	Value			Units	Comments
		Min	Typ	Max		
Sensitivity		-130	-128 -125.5	-125 -122	dBm dBm	1200 bps $\Delta f = 4kHz$ 2400 bps $\Delta f = 4.5kHz$ LO = -15dBm

Centre frequency acceptance		+/-1.9	+/-2.3 +/-2		kHz	1200 bps $\Delta f = 4kHz$ 2400 bps $\Delta f = 4.5kHz$ LO = -15dBm
Deviation acceptance			+/-2.2 +/-2		kHz	1200 bps $\Delta f = 4kHz$ 2400 bps $\Delta f = 4.5kHz$ LO = -15dBm

RECEIVER CHARACTERISTICSMeasurement conditions unless stated $V_{cc1} = 1.3V$, $V_{cc2} = 2.7V$, LNA = 22dB Power Gain, 2dB Noise figure,Carrier frequency 470MHz, BER 1 in 30, $T_{amb} = 25^{\circ}C$ (TPx/TPy typically:- $140mV_{pp} \pm 10\%$ for - 73dBm RF input to the LNA)

Characteristics	Pin	Value			Units	Comments
		Min	Typ	Max		
Sensitivity		-128	-126	-123	dBm	1200 bps $\Delta f = 4kHz$ LO = -15dBm
Intermodulation		50	55.5		dB	1200 bps $\Delta f = 4kHz$ LO = -15dBm
Adjacent channel		67	72.5		dB	1200 bps $\Delta f = 4kHz$ LO = -15dBm Channel spacing 25kHz
Centre frequency acceptance			+/- 2.3		kHz	1200 bps $\Delta f = 4kHz$ LO = -15dBm
Deviation acceptance			+/- 2.2		kHz	1200 bps $\Delta f = 4kHz$ LO = -15dBm

OPERATION OF SL6609A

The SL6609A is a Direct Conversion Receiver designed for use up to 470MHz. It is available in a 28 pin SSOP package and it integrates all the facilities required for the conversion of an RF FSK signal to a base-band data signal.

Low Noise Amplifier

To achieve optimum performance it is necessary to incorporate a Low Noise RF Amplifier at the front end of the receiver. This is easily biased using the on chip voltage and current sources provided.

All voltages and current sources used for bias of the RF amplifier, receiver and mixers should be RF decoupled using suitable capacitors (see Fig.4 for a suitable Low-Noise-Amplifier).

Local Oscillator

The Local Oscillator signal is applied to the device in phase quadrature. This can be achieved with the use of two RC networks operating at the -3dB/45° transfer characteristic, giving a full 90° phase differential between the LO ports of the device. Each LO port of the device also requires an equal level of drive from the Oscillator. (see Fig.5).

Gyrator Filters

The on chip filters include an adjustable gyrator filter. This may be adjusted with the use of an additional resistor between Pin 4 and GND. This allows flexibility of filter characteristics and also allows for compensation for possible process variations.

Audio AGC

The Audio AGC fundamentally consists of a current sink which is controlled by the audio (baseband data) signal. It has three parameters that may be controlled by the user. These are the Attack (turn on) time, Decay (duration) time and Threshold level (see Figs.6 and 7). See Application note for details.

Regulator

The on chip regulator must be used in conjunction with a suitable PNP transistor to achieve regulation. As the transistor forms part of the regulator feedback loop the transistor should exhibit the following characteristics:-

$$H_{FE} > = 100 \text{ for } V_{CE} > = 0.1V$$

Pin Number	Pin Name	Pin Description
1	TPX	X channel pre-gyrator filter test-point. This can be used for input and output
2	RFIADJ	RF current source adjustment pin
3	LOY	LO input channel Y
4	GYRI	Gyrator current adjust pin
5	LOX	LO input channel X
6	VR	VREF 1.0 V internal signal ground
7	TPY	Y channel pre-gyrator filter test point, input or output
8	GTHADJ	Audio AGC gain and threshold adjust. RSSI signal indicator
9	TCADJ	Audio AGC time constant adjust
10	BEC	Battery economy control
11	BATTFL	Battery flag output
12	TPLIMY	Y channel limiter (post gyrator filter) test point, output only
13	VCC2	Supply connection
14	DATAOP	Data output pin
15	TPLIMX	X channel limiter (post gyrator filter) test point, output only
16	BRF2	Bit rate filter 2, input to data output stage
17	BRF1	Bit rate filter 1, output from detector
18	DIG GND	Digital ground
19	VBG	Bandgap voltage output
20	VBATT	Battery flag input voltage
21	VCC1	Supply connection
22	REGCNT	1V regulator control external PNP drive
23	VREG	1V regulator output voltage
24	MIXB	Mixer input B
25	GND	Ground
26	MIXA	Mixer input A
27	IRFAMP	Current source for external LNA. Value of current output will decrease at high mixer input signal levels due to RF AGC
28	IAGCOUT	Audio AGC output current

Notes

- The values of R13 is determined by the set-up procedure. See Application Note.
- The value of C9 is determined by the output data rate. Use 2nF for 512bps, 1nF for 1200bps and 470pF for 2400bps.
- L2 is used in the Audio AGC circuit (see Fig. 6). For the characteristics of the Audio AGC current source see Fig.7. If the audio AGC is not required then the current source (Pin 28) may be disabled by connecting Pin 9 (TCADJ) to VR (Pin 6) and by connecting Pin 28 (IAGCOUT) to Vcc1, (R18). The voltage at Pin 8 may still be used as an RSSI. R9, C8, C14, C19, R17 and D1 may then be omitted. See Fig.6 for AGC component values.
- L1 and C26 form the low noise matching network for the RF amplifier. The values given are for the RF amplifier specified in the Applications Circuit with no Audio AGC connected. i.e. R17 and D1 omitted.
- Suggested diode for use with the Audio AGC circuit (see Fig.6) (D1 is not included on the general demonstration circuit).
- The value of R11 is dependent on the data output load. R11 should allow sufficient current to drive the data output load.

Notes

1. The values of R13 is determined by the set-up procedure. See Application Note.
2. The value of "C9" is determined by the output data rate. Use 2nF for 512bps, 1nF for 1200bps and 470pF for 2400bps.
3. R12 & Q4 form a dummy load for the regulator. Permitted load currents for the regulator are 250μA to 5mA. The 1V regulator (output Pin 23) can be switched off by connecting Pin 23 directly to VCC2. Q1, Q4, R12 and C12 must then be omitted
4. L2 is used in the Audio AGC circuit (see Fig.6). For the characteristics of the Audio AGC current source see figure 7. If the Audio AGC is not required then the current source (Pin 28) may be disabled by connecting
