

# Subminiature Basic Switch

## SSG

### Global Subminiature Basic Switch Conforming to EN, UL, and CSA Standards

- A wide operating temperature range of -25°C to 125°C is available for at high-temperature use.
- PCB terminal models are resistant to flux.
- Even-pitched PCB terminals.
- Mounting hole size of M2.2.
- RoHS Compliant.

**Note:** 1. Data shown are of initial value.

2. The dielectric strength values shown is measured using a separator between the switch and metal mounting plate.

3. For pin plunger models, the above values apply for use at the free position and total travel position. For the lever models, the values apply at the total travel position with contact separation < 10μs max.

**Note:** 1. The values in the parentheses are for the SSG-01.

2. The above current ratings are the values of the steady-state current.

3. Inductive load has a power factor of 0.7 min. (AC) and a time constant of 7 ms max. (DC).

4. Lamp load has an inrush current of 10 times the steady-state current.

5. Motor load has an inrush current of 6 times the steady-state current.

6. If the Switch is used in a DC circuit and is subjected to a surge current, connect a surge suppressor across the switch.

7. The electrical rating applies under the following test conditions:

Ambient Temperature = 20±2°C, Ambient Humidity = 65±5%, Operating frequency = 30 operations/minute

**Note:** Minimum applicable loads are indicated by N standard reference values. This value represents the failure rate at a 60% ( $\lambda_{60}$ ) reliability level (JIS C5003).

The equation  $\lambda_{60}=0.5 \times 10^{-6}$  / operations indicates that a failure rate of 1/2,000,000 operations can be expected at a reliability level of 60%

### Mounting

#### Panel Mounting

All switches may be panel mounted using M2.2 mounting screws with plane washers or spring washers to securely mount the switch. Tighten the screws to a torque of 0.20 to 0.24 N·m.

### Quick-connect Terminals (#110)

The technical drawing illustrates a three-hole probe assembly. The left view is a side profile showing the probe's internal components, including a central shaft with a 2.2<sup>+0.1</sup>/<sub>-0</sub> dia. hole and three outer holes with diameters of 1.2<sup>+0.1</sup>/<sub>-0</sub>, 0.8<sup>+0.1</sup>/<sub>-0</sub>, and 0.5<sup>+0.1</sup>/<sub>-0</sub>. Key dimensions include overall width of 4.8±0.3, mounting hole diameter of 2.27±0.1, and various offsets like 1.8, 6.9, and 7.7. Labels PT and OP indicate specific points or features. The right view shows the end of the probe with a 3.5mm wide top section and a 4±0.3mm wide base.

# Precautions

Be sure to read the precautions and information common to all Snap Action and Detection Switches, contained in the Technical User's Guide, "Snap Action Switches, Technical Information" for correct use.

## Correct Use

### Mounting

Mount the switch onto a flat surface. Mounting on an uneven surface may cause deformation of the switch, resulting in faulty operation or breakage in the housing.

### Operating Stroke

Make sure that the operating stroke is 70% to 100% of the rated OT distance. Do not operate the actuator exceeding the OT distance, otherwise the life expectancy of the switch may be shortened.

### Using Microloads

Using a model for ordinary loads to switch microloads may result in faulty operation. Instead, use the models that are designed for microloads and that operate in the following range;

However, even when using microload models within the operating range shown above, if inrush current or inductive voltage spikes occur when the contact is opened or closed, then contact wear may increase and so decrease the service life. Therefore, insert a contact protection circuit where necessary.

## Cautions

### Handling

Turn OFF the power supply before mounting or removing the switch, wiring, or performing maintenance for inspection. Failure to do so may result in electric shock or burning.

### Terminal Connection

When soldering the lead wire to the terminal, first insert the lead wire conductor through the terminal hole and then solder.

Make sure that the capacity of the soldering iron is 60 W (temperature of soldering iron: 350°C to 400°C) maximum. Do not take more than 3 seconds to solder the switch terminal. Improper soldering involving an excessively high temperature or excessive soldering time may deteriorate the characteristics of the switch.

Be sure to apply only the minimum required amount of flux. The switch may have contact failures if flux intrudes in the interior of the switch.

Use the following lead wires to connect to the solder terminals;

| Model  | Conductor size |
|--------|----------------|
| SSG-01 | AWG 22 to 20   |
| SSG-5  | AWG 20 to 18   |

To automatically solder the Switch to a PCB in a soldering bath, complete soldering within 5 seconds at a temperature of 260 +/- 5°C and avoid the overflow of flux onto the surface of the PCB where the Switch or other parts are mounted.

Wire the quick-connect terminals (#110) with receptacles. Insert the terminals straight into the receptacles. Do not impose excessive force on the terminal in the horizontal direction, otherwise the terminal may be deformed or the housing may be damaged.

### Insulation Distance

Use a separator between the switch and metal mounting panels, to ensure proper dielectric characteristics are achieved.

The Switch does not have a ground terminal. The minimum distance through insulation should be 0.9 mm per IEC61058-1. If proper insulation for the end product cannot be secured, additional insulation such as a Separator or insulation cover should be attached.
