# **Panasonic**

# 1a1b/2a 8A polarized power relays

# ST RELAYS

**RoHS** compliant

Protective construction: Sealed type

#### **FEATURES**

 Even with small form factor, sensitive enough for direct ICdriving

The dimensions of this high-density 4-gap balanced armature are 31 mm  $\times$  14 mm  $\times$  11 mm 1.220 inch  $\times$  .551 inch  $\times$  .433 inch. Despite this small size, high sensitivity is achieved by a mechanism that incorporates high-efficiency polarized magnetic circuits along with our exclusive spring alignment method. With an minimum operating power of about 150 mW, nominal operating power of 240 mW, this relay can be directly driven by transistor or chip controllers.

#### 2. High switching capability

High contact pressure, low contact bounce, and forced separation structure that radically improves resistance to contact welding (1 Form A 1 Form B type equivalent to TV-3). Strong against lamp inductive loads, maximum switching capacity has reached 3,040 VA (8A 380V AC).

- 3. High breakdown voltage Optimal for control in 250 V power circuits
  High breakdown voltage has been achieved. Between contacts and coil of 3,750 Vrms; Surge breakdown voltage between coil and contact of 6,000 V, and between open contacts of 1,200 Vrms mean that these relays are suitable even for 250 V power circuit control.
- 4. Improved stability
  Conforms to all types of safety
  standards

Insulating distance of more than 3 mm .118 inch secured. Complies with Japan Electrical Appliance and Material Safety Law requirements for operating 200 V power supply circuits, and conforms with UL, CSA and VDE standards.

5. Latching types available

In addition to single side stable types, convenient 2 coil latching types with memory functions are also available. Moreover, we offer 2 Form A specifications which, with double pole switching for applications such as 250 V power circuit switching, can enable safer designs.

-1-

#### 6. Automatic cleaning possible

The sealed design means that these relays can undergo immersion in automatic washing systems and are suitable for automatic soldering. Even in difficult environments, the contacts remain reliable.

- 7. Easy to design PC board patterns
  Features 4/10 dual-in-line terminals.
  Because the lead spacing has a pitch
  greater than 7.54 mm .297 inch,
  designers can make easy adjustments
  with the width of the land size. This,
  along with the large insulation
  distance, simplifies the drawing of PC
  board patterns.
- 8. To improve soldering efficiency, preapplication of solder to the terminals is recommended
- 9. Sockets for PC board and soldering are available

#### **NOTES**

- 1. For cautions for use, please read "GENERAL APPLICATION GUIDELINES".
- 2. PC board patterns for 2 coil latching types

When applying relays in power supply operation circuits for finished products regulated by the Electrical Appliance and Material Safety Law, use the pattern shown below.

## 3. Soldering should be done under the following conditions:

1

250°C 482°F within 10s 300°C 572°F within 5s 350°C 662°F within 3s

2) For automatic cleaning, the boiling method is recommended. Avoid ultrasonic cleaning which subjects the relays to high frequency vibrations, which may cause the contacts to stick. It is recommended that a fluorinated hydrocarbon or other alcoholic solvents be used.

### PRECAUTIONS FOR USE (SOCKET)

#### 1. PC board mounting method PC board pattern

The terminal configuration is symmetrical on the left and right, so an arrow mark 1 is stamped on the socket to prevent misinsertion. We recommend printing the same arrow mark extstyle extstylemounting side (side opposite from pattern) of the PC board. In this case, the terminal configuration becomes the terminal nos. noted near the drilling holes.

#### 2. Chassis cutout

Chassis cutting dimensions

15.0±0.2

If the chassis hole is punched with a press, set so the release R on the front side (A side).

The range for chassis thickness is 0.6 to 2.2 mm .024 to .087 inch.

#### 3. Relay mounting and removal

(1) Align the directions of the relay and socket.

(2) Insert the relay all the way in, so it is securely in place.

(3) Press the part indicated by A in the B direction, and fasten by placing the hook on the relay.

(4) When removing the relay, completely release the hooks on both sides and pull the relay out.
