TL5012

Compact Safety Interlock Switch with Guard Door Locking

- High locking force of 1000 N (225 lb.) locks guard door shut until machine is safe to enter
- NEMA 6 enclosure enables the TL5012 to withstand water washdown cleaning
- Lid-mounted status light is on when solenoid is energized, indicating that solenoid has unlocked the guard door
- Easy installation—compact footprint of 2.25 x 5.25 in. and rotatable head allowing 4 possible actuator entry points makes installation easy
- Optional override key allows manual unlocking of the guard while, at the same time, locking the safety contacts open
- Long life—the TL5012, with its stainless steel actuator, is designed for a minimum of one million actuations.

■ Operation

The head rotates 180° to give four possible actuator entry points. Once the required entry has been selected, attach catch case to the switch.

A distance of 2.45 mm or less is required between face of switch and face of actuator for switch to lock.

Locking Force = 1000 N (225 lb.) maximum

Contact Arrangements

Emergency Override

The TL5012's locking mechanism can be overridden in emergencies by using either a torx screwdriver or the override key.

Optional Override key

■ Applications

Typical applications are on sliding guard doors or swinging guard doors that must remain locked until a signal is applied to unlock the guard door.

■ Application Monitoring Units

SR223SMT Timer Unit

Used with the TL4024 for machines with constant overrun. Gives a timed delay to the lock/release signal. Failsafe and adjustable to a range of times from 1.0 seconds up to 31 seconds.

For information on the SR223SMT, see page H82

SR125SMS Stop Motion Sensing Unit

Used with the TL4024 for machines with inconstant or variable overrun. Senses back EMF of AC or DC motors. Failsafe and adjustable to a range of 0.01 V to 0.10 V.

For information on the SR125SMS, see page H42

Safety Monitoring Relay Units

Safety monitoring relays ensure a maximum level of safety by monitoring all wiring in the safety circuit, including switches and contactors. Any fault and the power to the machine is switched off. A variety of safety monitoring relay units are available.

For information on Safety Monitoring Relays, see page H1
