### Description

The TS431 is a low-voltage, three-terminal, programmable shunt voltage reference. The output voltage can be set to any value between  $V_{ref}$  (1.24 V) and 6 V with two external resistors. The TS431 is able to operate at a lower voltage (1.24 V) and lower cathode current than the widely used TL431 and TL1431 shunt voltage reference. When driving an optocoupler, the TS431 is particularly useful for regulating 3.3 V switching power supplies.

### 2.1 Definition of output voltage change over temperature range

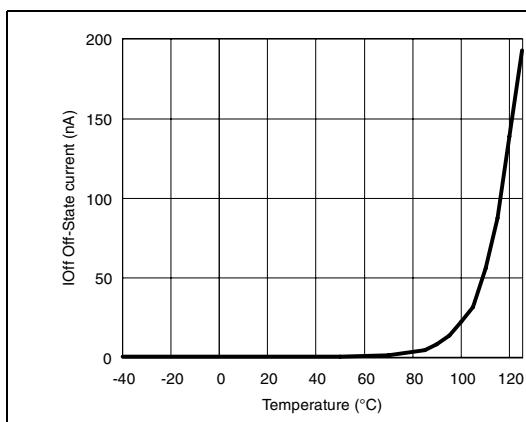

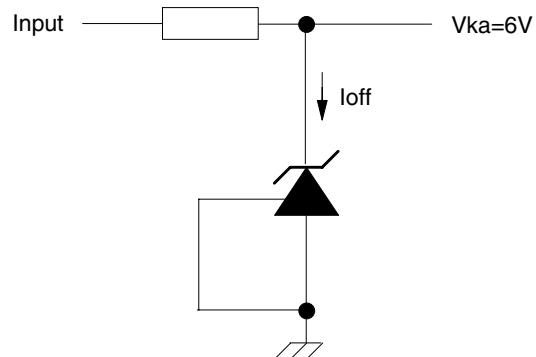

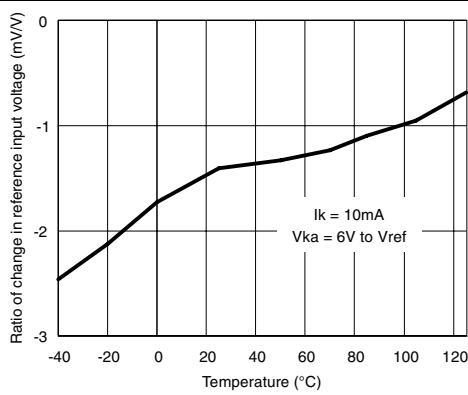

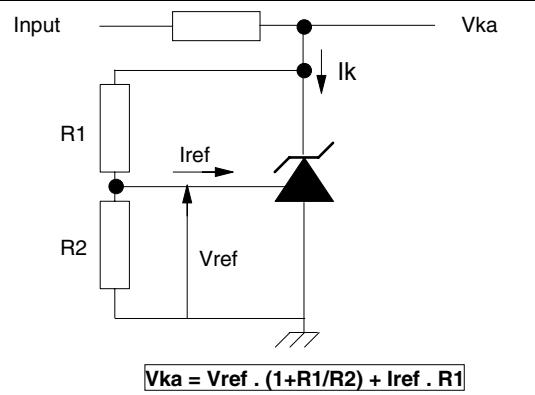

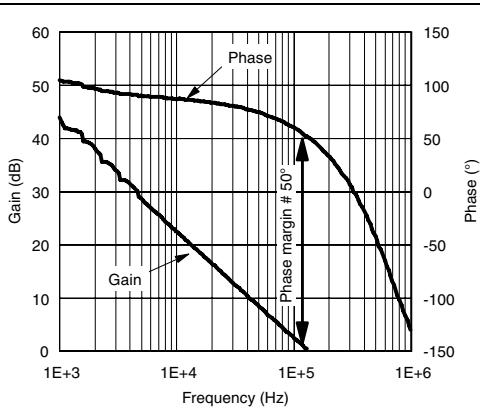

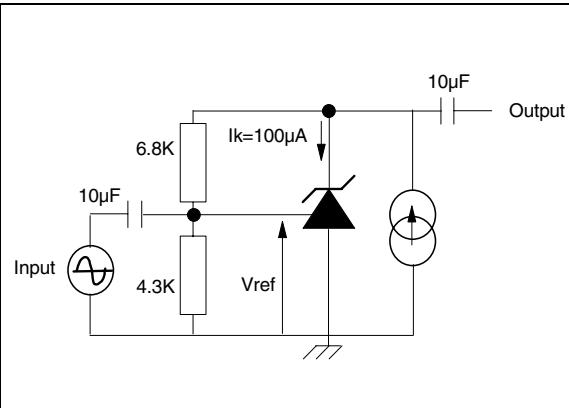

$\Delta V_{ref}$  is defined as the difference between the maximum and minimum values obtained over the full temperature range.

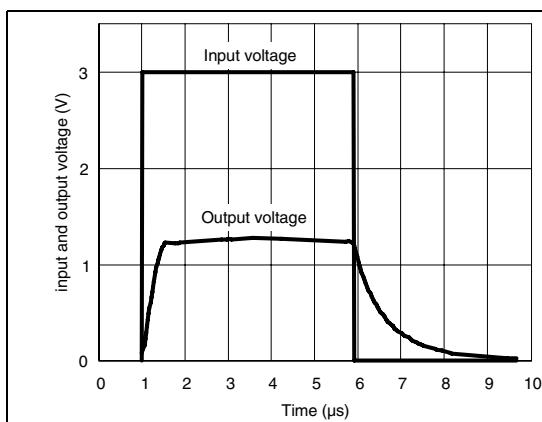

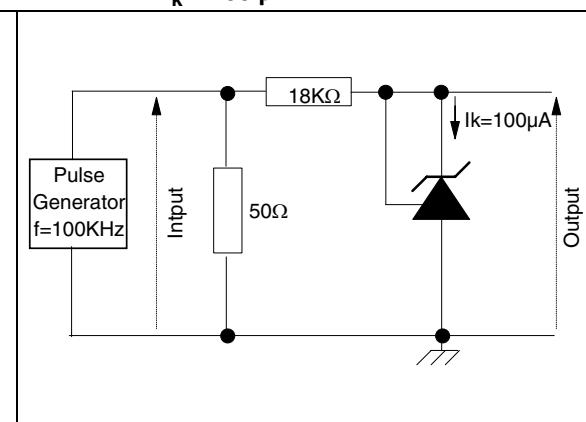

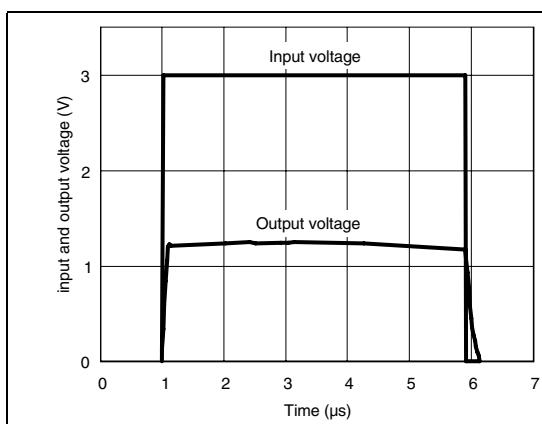

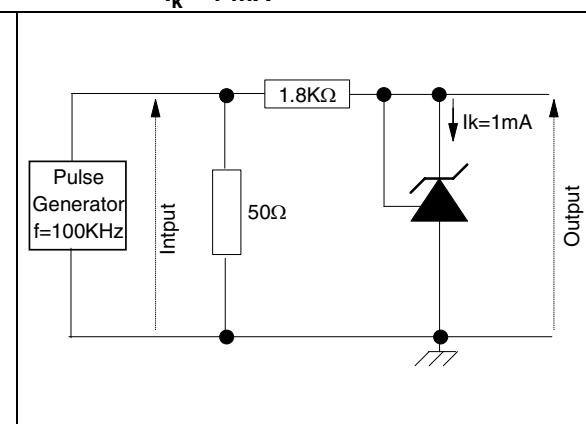

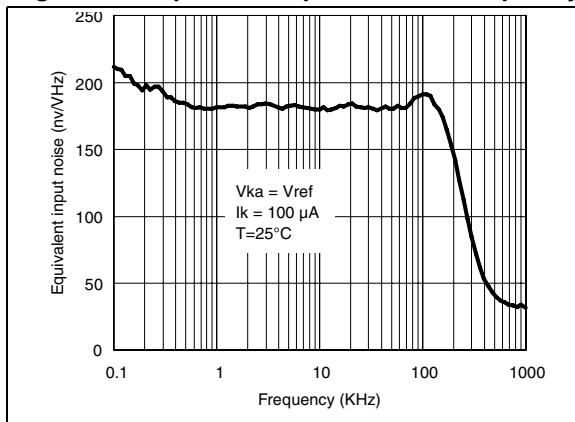

$$\Delta V_{ref} = V_{ref \max} - V_{ref \min}$$
