

TW-DIY-5024

#### **Logic Probe Kit - DIY**

An important piece of equipment for test & measurement of digital equipment. Can be used in fault finding & testing as well as to assist in design work & to find out how digital equipment works. Switch for either TTL or CMOS. Our own modern design using a PUT. Includes detection circuit for very fast pulses. Gives visual (3 LEDs) and audio (piezo buzzer) response.

Terrific Starter Kit.
