

VND5004A-E VND5004ASP30-E

Double 4mΩ high side driver with analog current sense
for automotive applications

Features

Max transient supply voltage	V _{CC}	41V
Operating voltage range	V _{CC}	4.5 to 27V
Max On-State resistance (per ch.)	R _{ON}	4 mΩ
Current limitation (typ)	I _{LIMH}	100A
Off state supply current	I _S	2 μA ⁽¹⁾

1. Typical value with all loads connected

■ General

- Inrush current active management by power limitation
- Very low stand-by current
- 3.0V CMOS compatible input
- Optimized electromagnetic emission
- Very low electromagnetic susceptibility
- In compliance with the 2002/95/EC European directive

■ Diagnostic functions

- Proportional load current sense
- Current sense disable
- Thermal shutdown indication

■ Protection

- Undervoltage shut-down
- Overvoltage clamp
- Load current limitation
- Thermal shut down
- Self limiting of fast thermal transients
- Protection against loss of ground and loss of V_{CC}
- Reverse battery protection with self switch on of the PowerMOS (see [Application schematic on page 18](#))
- Electrostatic discharge protection

Application

- All types of resistive, inductive and capacitive loads
- Suitable for power management applications

Description

The VND5004ATR-E and VND5004ASP30-E are devices made using STMicroelectronics VIPower technology. They are intended for driving resistive or inductive loads with one side connected to ground. Active V_{CC} pin voltage clamp and load dump protection circuit protect the devices against transients on the V_{CC} pin (see ISO7637 transient compatibility table). These devices integrate an analog current sense which delivers a current proportional to the load current (according to a known ratio) when CS_DIS is driven low or left open. When CS_DIS is driven high, the CURRENT SENSE pin is high impedance. Output current limitation protects the devices in overload condition. In case of long duration overload, the devices limit the dissipated power to a safe level up to thermal shut-down intervention. Thermal shut-down with automatic restart allows the device to recover normal operation as soon as a fault condition disappears.

2.1 Absolute maximum ratings

Stressing the device above the ratings listed in the “Absolute maximum ratings” tables may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to the conditions in this section for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

3 Application information

Figure 22. Application schematic

3.1 MCU I/Os protection

When negative transients are present on the V_{CC} line, the control pins will be pulled negative to approximately -1.5V.

ST suggests the insertion of resistors (R_{prot}) in the lines to prevent the μC I/Os pins from latching up.

The values of these resistors provide a compromise between the leakage current of the μC , the current required by the HSD I/Os (input levels compatibility) and the latch-up limit of the μC I/Os.

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH}) / I_{IHmax}$$

Calculation example:

For $V_{CCpeak} = -1.5V$ and $I_{latchup} \geq 20mA$; $V_{OH\mu C} \geq 4.5V$

$$75\Omega \leq R_{prot} \leq 240k\Omega$$

Recommended values: $R_{prot} = 10k\Omega$, $C_{EXT} = 10nF$

3.2 Load dump protection

D_{ld} is necessary (Voltage Transient Suppressor) if the load dump peak voltage exceeds the V_{CCPK} max rating. The same applies if the device will be subject to transients on the V_{CC} line that are greater than the ones shown in the ISO 7637-2: 2004(E) table.

3.3 Maximum demagnetization energy ($V_{CC} = 13.5V$)

Figure 23. Maximum turn off current versus inductance

Note:

Values are generated with $R_L = 0 \Omega$

In case of repetitive pulses, T_{jstart} (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

5 Package and packing information

5.1 ECOPACK® packages

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. ECOPACK® packages are lead-free. The category of Second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label.

ECOPACK is an ST trademark. ECOPACK specifications are available at www.st.com.
