

## Features

- Optimized for 1.8V systems
  - As fast as 5.7 ns pin-to-pin delays
  - As low as 13  $\mu$ A quiescent current
- Industry's best 0.18 micron CMOS CPLD
  - Optimized architecture for effective logic synthesis. Refer to the CoolRunner<sup>™</sup>-II family data sheet for architecture description.
  - Multi-voltage I/O operation — 1.5V to 3.3V
- Available in multiple package options
  - 100-pin VQFP with 80 user I/O
  - 144-pin TQFP with 118 user I/O
  - 132-ball CP (0.5mm) BGA with 106 user I/O
  - 208-pin PQFP with 173 user I/O
  - 256-ball FT (1.0mm) BGA with 184 user I/O
  - Pb-free available for all packages
- Advanced system features
  - Fastest in system programming
    - 1.8V ISP using IEEE 1532 (JTAG) interface
  - IEEE1149.1 JTAG Boundary Scan Test
  - Optional Schmitt-trigger input (per pin)
  - Unsurpassed low power management
    - DataGATE enable (DGE) signal control
  - Two separate I/O banks
  - RealDigital 100% CMOS product term generation
  - Flexible clocking modes
    - Optional DualEDGE triggered registers
    - Clock divider (divide by 2,4,6,8,10,12,14,16)
    - CoolCLOCK
  - Global signal options with macrocell control
    - Multiple global clocks with phase selection per macrocell
    - Multiple global output enables
    - Global set/reset
  - Advanced design security
  - PLA architecture
    - Superior pinout retention
    - 100% product term routability across function block
  - Open-drain output option for Wired-OR and LED drive
  - Optional bus-hold, 3-state or weak pull-up on selected I/O pins
  - Optional configurable grounds on unused I/Os
  - Mixed I/O voltages compatible with 1.5V, 1.8V, 2.5V, and 3.3V logic levels
    - SSTL2-1, SSTL3-1, and HSTL-1 I/O compatibility
  - Hot pluggable

## Description

The CoolRunner<sup>™</sup>-II 256-macrocell device is designed for both high performance and low power applications. This lends power savings to high-end communication equipment and high speed to battery operated devices. Due to the low power stand-by and dynamic operation, overall system reliability is improved.

This device consists of sixteen Function Blocks inter-connected by a low power Advanced Interconnect Matrix (AIM). The AIM feeds 40 true and complement inputs to each Function Block. The Function Blocks consist of a 40 by 56 P-term PLA and 16 macrocells which contain numerous configuration bits that allow for combinational or registered modes of operation.

Additionally, these registers can be globally reset or preset and configured as a D or T flip-flop or as a D latch. There are also multiple clock signals, both global and local product term types, configured on a per macrocell basis. Output pin configurations include slew rate limit, bus hold, pull-up, open drain and programmable grounds. A Schmitt-trigger input is available on a per input pin basis. In addition to storing macrocell output states, the macrocell registers may be configured as "direct input" registers to store signals directly from input pins.

Clocking is available on a global or Function Block basis. Three global clocks are available for all Function Blocks as a synchronous clock source. Macrocell registers can be individually configured to power up to the zero or one state. A global set/reset control line is also available to asynchronously set or reset selected registers during operation. Additional local clock, synchronous clock-enable, asynchronous set/reset and output enable signals can be formed using product terms on a per-macrocell or per-Function Block basis.

A DualEDGE flip-flop feature is also available on a per macrocell basis. This feature allows high performance synchronous operation based on lower frequency clocking to help reduce the total power consumption of the device.

Circuitry has also been included to divide one externally supplied global clock (GCK2) by eight different selections. This yields divide by even and odd clock frequencies.

The use of the clock divide (division by 2) and DualEDGE flip-flop gives the resultant CoolCLOCK feature.

DataGATE is a method to selectively disable inputs of the CPLD that are not of interest during certain points in time.

By mapping a signal to the DataGATE function, lower power can be achieved due to reduction in signal switching.

Another feature that eases voltage translation is I/O banking. Two I/O banks are available on the CoolRunner-II 256 macrocell device that permit easy interfacing to 3.3V, 2.5V, 1.8V, and 1.5V devices.

The CoolRunner-II 256 macrocell CPLD is I/O compatible with various I/O standards (see [Table 1](#)). This device is also 1.5V I/O compatible with the use of Schmitt-trigger inputs.

## RealDigital Design Technology

Xilinx CoolRunner-II CPLDs are fabricated on a 0.18 micron process technology which is derived from leading edge FPGA product development. CoolRunner-II CPLDs employ RealDigital, a design technique that makes use of CMOS technology in both the fabrication and design methodology. RealDigital design technology employs a cascade of CMOS gates to implement sum of products instead of traditional sense amplifier methodology. Due to this technology, Xilinx CoolRunner-II CPLDs achieve both high-performance and low power operation.

## Supported I/O Standards

The CoolRunner-II 256 macrocell features LVCMOS, LVTTTL, SSTL and HSTL I/O implementations. See [Table 1](#)

for I/O standard voltages. The LVTTTL I/O standard is a general purpose EIA/JEDEC standard for 3.3V applications that use an LVTTTL input buffer and Push-Pull output buffer. The LVCMOS standard is used in 3.3V, 2.5V, 1.8V applications. Both HSTL and SSTL I/O standards make use of a  $V_{REF}$  pin for JEDEC compliance. CoolRunner-II CPLDs are also 1.5V I/O compatible with the use of Schmitt-trigger inputs

## Absolute Maximum Ratings

Symbol	Description	Value	Units
$V_{CC}$	Supply voltage relative to ground	-0.5 to 2.0	V
$V_{CCIO}$	Supply voltage for output drivers	-0.5 to 4.0	V
$V_{JTAG}^{(2)}$	JTAG input voltage limits	-0.5 to 4.0	V
$V_{AUX}$	JTAG input supply voltage	-0.5 to 4.0	V
$V_{IN}^{(1)}$	Input voltage relative to ground	-0.5 to 4.0	V
$V_{TS}^{(1)}$	Voltage applied to 3-state output	-0.5 to 4.0	V
$T_{STG}^{(3)}$	Storage Temperature (ambient)	-65 to +150	°C
$T_J$	Junction Temperature	+150	°C

### Notes:

- Maximum DC undershoot below GND must be limited to either 0.5V or 10 mA, whichever is easiest to achieve. During transitions, the device pins may undershoot to -2.0V or overshoot to +4.5V, provided this over or undershoot lasts less than 10 ns and with the forcing current being limited to 200 mA.
- Valid over commercial temperature range.
- For soldering guidelines and thermal considerations, see the [Device Packaging](#) information on the Xilinx website. For Pb free packages, see [XAPP427](#).

## Device Part Marking

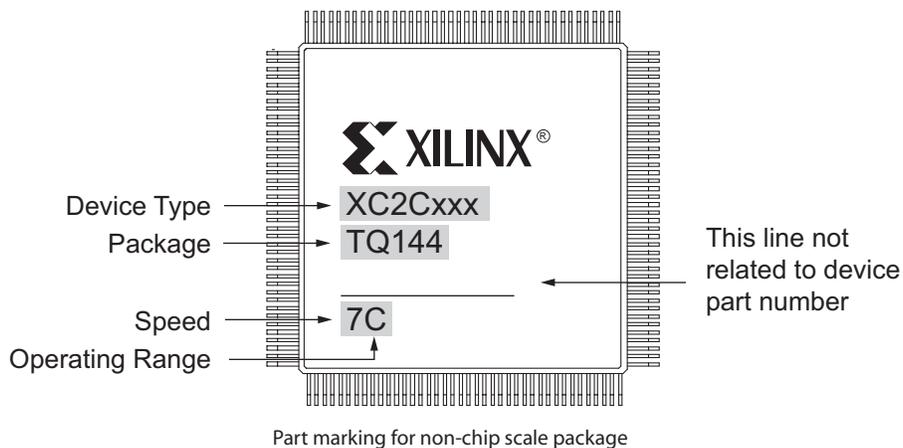

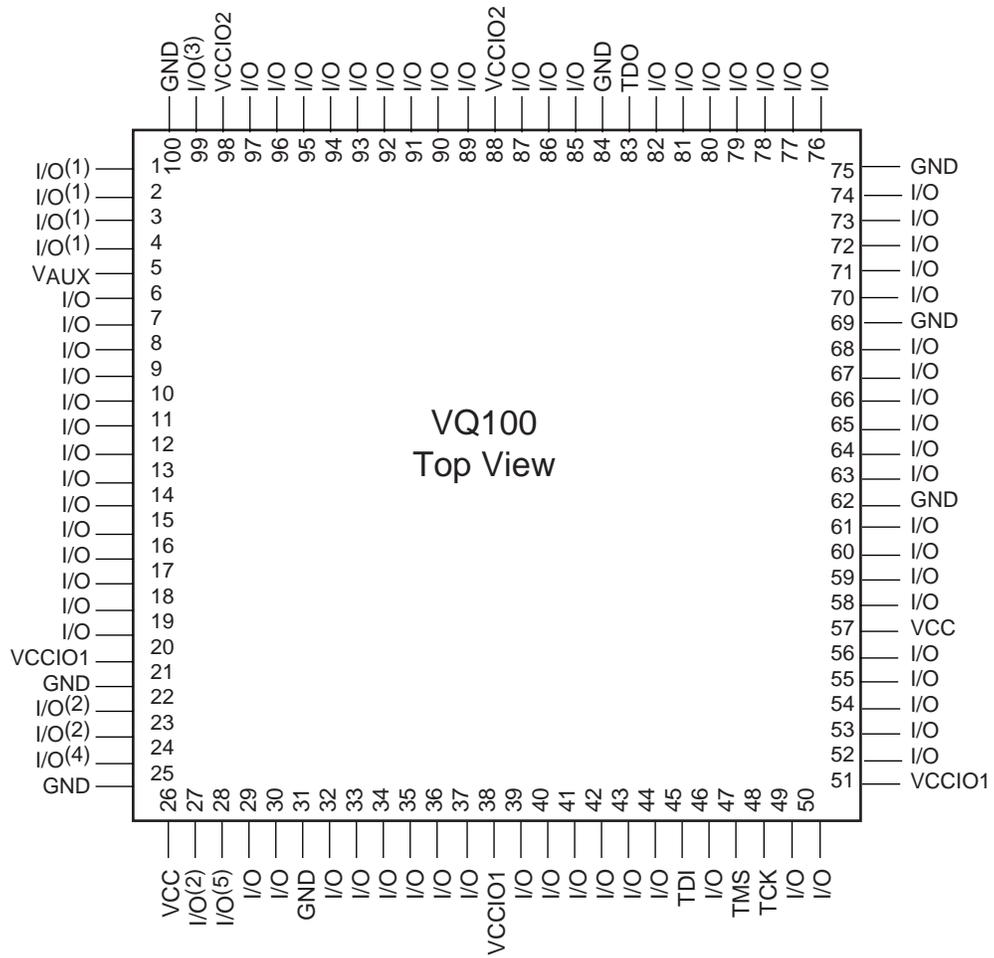

Figure 5: Sample Package with Part Marking

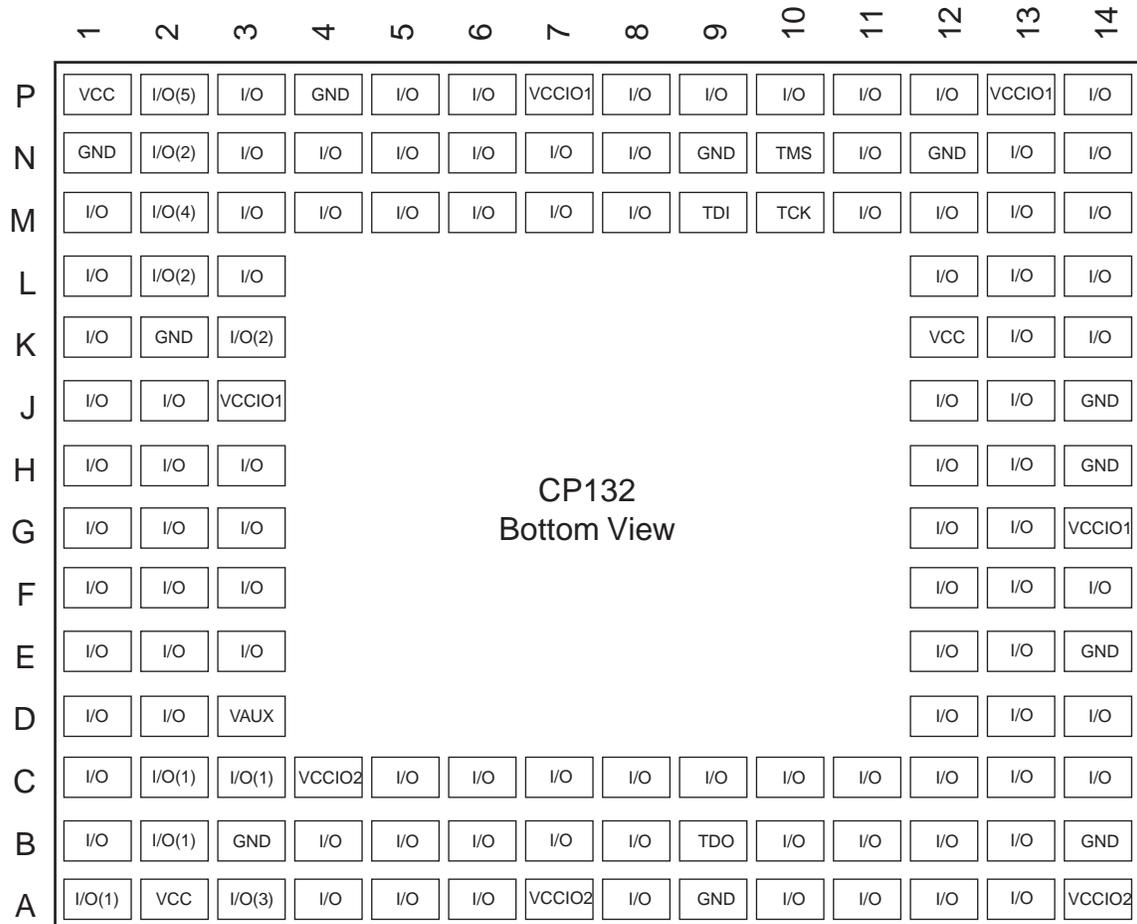

**Note:** Due to the small size of chip scale packages, the complete ordering part number cannot be included on the package marking. Part marking on chip scale packages by line are:

- Line 1 = X (Xilinx logo) then truncated part number
- Line 2 = Not related to device part number
- Line 3 = Not related to device part number
- 1. Line 4 = Package code, speed, operating temperature, three digits not related to device part number. Package codes: C5 = CP132, C6 = CPG132.

## Revision History

The following table shows the revision history for this document.

Date	Version	Revision
05/09/02	1.0	Initial Xilinx release.
05/13/02	1.1	Updated AC Electrical Characteristics and added new parameters.
10/31/02	1.2	Corrected package user I/O, added Voltage Referenced DC tables.
03/17/03	2.0	Added Characterization numbers for product release and device part marking
04/02/03	2.1	Updated $T_{SOL}$ max from 260 to 220. Changed $I_{CCSB}$ units from mA to $\mu$ A.
01/26/04	2.2	Updated Device Part Marking. Updated links and Tsol.
02/26/04	2.3	Corrected Theta JC value on XC2C256-7TQ144.
08/03/04	2.4	Pb-free documentation
08/19/04	2.5	Changes to $I_{CCSB}$ maximum specifications in DC Electrical Characteristics table, on page 3.
10/01/04	2.6	Add Asynchronous Preset/Reset Pulse Width specification to AC Electrical Characteristics.
03/07/05	2.7	Removed -5 speed grade. Changes to Table 1, I/O Standards.
