

Z86193

CMOS Z8® MICROCONTROLLER MULTIPLIER/DIVIDER/SEARCH/MERGE

GENERAL DESCRIPTION

The Z86193 is a CMOS ROMless Z8® microcontroller enhanced with a hardwired 16-bit x 16-bit multiplier, 32-bit/16-bit divider, three 16-bit counter/timers, search and merge instructions, Evaluation mode and a Bus Request mode. The device is code compatible with other Z8 family devices, yet it offers more powerful mathematical capabilities, data searching capabilities, and bit manipulation. The Z86193 is offered in a 64-pin VQFP package.

The Z86193 provides up to 16 output address lines permitting an address space of up to 64 Kbytes each of Program or Data memory. Eight address outputs are provided by a de-multiplexed 8-bit Address Bus (A7-A0) or by a multiplexed 8-bit Address/Data Bus (AD7-AD0). The remaining eight address lines (A15-A8) can be provided by the software configuration of Port0 to output address.

The Z86193 includes a bus which differs from other Z8 devices. The Z86193 provides bus control signals /RD (Read Strobe), /WR (Write Strobe), and ALE (Address Latch Enable).

There are 464 8-bit registers located on-chip and organized as 444 general-purpose registers, 16 control and status registers, one reserved register, and up to three I/O port registers. The Register File is partitioned into two Register Pages. Page0 contains 208 registers and Page1 contains 208 registers. The 48 other registers are common to both Register Pages. The Register file is also divided into 29 working register groups of 16 registers each. Configuration of the registers in this format allows the use of short format instructions. There are 17 additional registers implemented in the Expanded Register file in Banks D and E. Two of the registers may be used as general-purpose, while the other 15 are used to supply data and control for the multiplier/divider unit and the additional counter/timers.

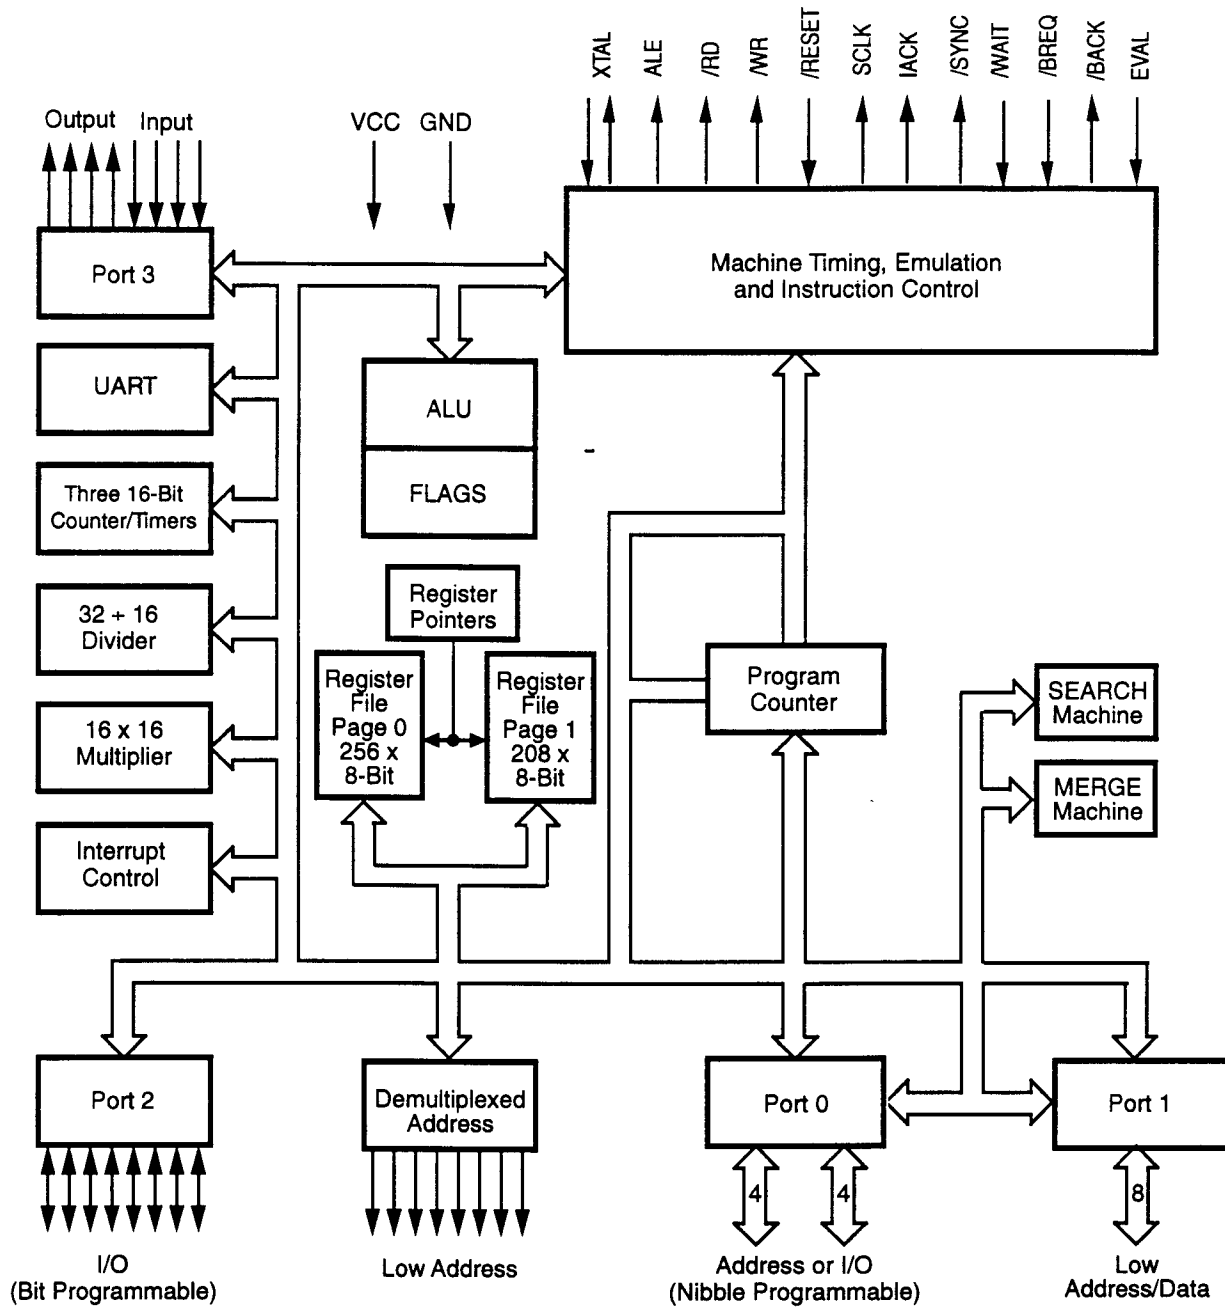

Notes:

All Signals with a preceding front slash, "/", are active Low, e.g.: B/W (WORD is active Low); /B/W (BYTE is active Low, only).

Power connections follow conventional descriptions below:

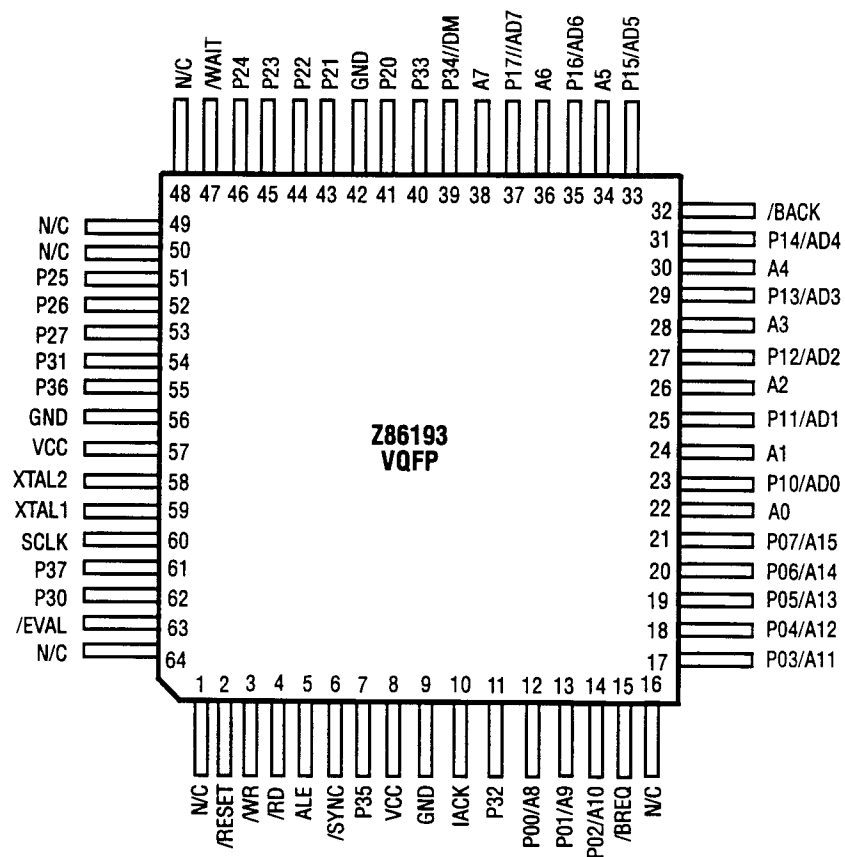

Connection	Circuit	Device
Power	V_{CC}	V_{DD}
Ground	GND	V_{SS}

ABSOLUTE MAXIMUM RATINGS

Symbol	Description	Min	Max	Units
V_{CC}	Supply Voltage*	-0.3	+7.0	V
T_{STG}	Storage Temp	-65	+150	C
T_A	Oper Ambient Temp	†	†	C

* Voltages on all pins with respect to GND.

† See Ordering Information

Stress greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; operation of the device at any condition above those indicated in the operational sections of these specifications is not implied. Exposure to absolute maximum rating conditions for an extended period may affect device reliability.

STANDARD TEST CONDITIONS

The characteristics listed below apply for standard test conditions as noted. All voltages are referenced to GND. Positive current flows into the referenced pin (Test Load Diagram).

Pre-Characterization Product:

The product represented by this CPS is newly introduced and Zilog has not completed the full characterization of the product. The CPS states what Zilog knows about this product at this time, but additional features or non-conformance with some aspects of the CPS may be

found, either by Zilog or its customers in the course of further application and characterization work. In addition, Zilog cautions that delivery may be uncertain at times, due to start-up yield issues.

Low Margin:

Customer is advised that since this is a Preliminary CPS, this product does not meet Zilog's internal guardbanded test policies for the specification requested and is supplied on an exception basis. Customer is cautioned that delivery may be uncertain and that, in addition to all other

limitations on Zilog liability stated on the front and back of the acknowledgement, Zilog makes no claim as to quality and reliability under the CPS. The product remains subject to standard warranty for replacement due to defects in materials and workmanship.
