## Description

The Fox XPRESSO Crystal Oscillator is a breakthrough in configurable Frequency Control Solutions.   XPRESSO utilizes a family of proprietary ASICs, designed and developed by Fox, with a key focus on noise reduction technologies.

The 3rd order Delta Sigma Modulator reduces noise to the levels that are comparable to traditional Bulk Quartz and SAW oscillators. The ASICs family has ability to select the output type, input voltages, and temperature performance features.

With the XPRESS lead-time, low cost, low noise, wide frequency range, excellent ambient performance, XpressO is an excellent choice over the conventional technologies.

Finished XPRESSO parts are 100% final tested.

## Labeling (Reels and smaller packaging are labeled with the below)

- Fox Part Number: **774-906-2**

- Quantity: **2000** pieces

- Description: **FXO-PC726R-906**

- Date Code **0745**
  (YYWW 2007 45th wk)

- LOT # **24435**
  *If traceability should become necessary*

An additional identification code is contained internally if tracking should ever be necessary

# Traceability – LOT Number & Serial Identification

## LOT Number

The LOT Number has direct ties to the customer purchase order. The LOT Number is marked on the "Reel" label, and also stored internally on non-volatile memory inside the XPRESSO part. XPRESSO parts that are shipped Tape and Reel, are also placed in an Electro Static Discharge (ESD) bag and will have the LOT Number labeled on the exterior of the ESD bag.

It is recommended that the XPRESSO parts remain in this ESD bag during storage for protection and identification.

If the parts become separated from the label showing the LOT Number, it can be retrieved from inside one of the parts, and the information that can be obtained is listed below:

- Customer Purchase Order Number
- Internal Fox Sales Order Number
- Dates that the XPRESSO part was shipped from the factory
- The assigned customer part number
- The specification that the part was designed for

## Serial Identification

The Serial ID is the individualized information about the configuration of that particular XPRESSO part. The Serial ID is unique for each and every XPRESSO part, and can be read by special Fox equipment.

With the Serial ID, the below information can be obtained about that individual, XPRESSO part:

- Equipment that the XPRESSO part was configured on
- Raw material used to configure the XPRESSO part
- Traceability of the raw material back to the foundries manufacturing lot
- Date and Time that the part was configured
- Any optimized electrical parameters based on customer specifications
- Electrical testing of the actual completed part
- Human resource that was monitoring the configuration of the part

Fox has equipment placed at key Fox locations World Wide to read the Lot Identification and Serial Number of any XPRESSO part produced and can then obtain the information from above within 24 hours

## MTTF / FITS  Calculations

Products are grouped together by process for MTTF calculations.
(All XpressO output and package types are manufactured with the same process)

Number of Parts Tested:        360 (120 of each output type: HCMOS, LVDS, LVPECL)
Number of Failures:  0
Test Temperature:   125°C
Number of Hours:    2000

MTTF was calculated using the following formulas:

[1.] Device Hours (*devhrs*) = (number of devices) x (hours at elevated temperature in °K)

[2.] $MTTF = \dfrac{devhrs \times af \times 2}{\chi^2}$

[3.] FITS = $\dfrac{1}{MTTF}$ * $10^9$

Where:

| Label | Name | Formula/Value |
|---|---|---|
| *af* | Acceleration Factor | $e^{(\frac{eV}{k}) \times (\frac{1}{t_1} - \frac{1}{t_2})}$ |
| eV | Activation Energy | 0.40 V |
| k | Boltzmann's Constant | 8.62 X $10^{-5}$ *eV*/°K |
| $t_1$ | | Operating Temperature (°K) |
| $t_2$ | | Accelerated Temperature (°K) |
| Θ | Theta | Confidence Level (60% industry standard) |
| r | Failures | Number of failed devices |
| $\chi^2$ | Chi-Square | statistical significance for bivariate tabular analysis [table look-up] based on assumed Θ (Theta – confidence) and number of failures (r)   For zero failures (60% Confidence): $\chi^2$ = 1.830 |

DEVICE-HOURS  = 360 x 2000 HOURS  = 720,000

ACCELERATION FACTOR  =  $e^{(\frac{0.40}{8.625}) \times (\frac{1}{298} - \frac{1}{398})}$  = 49.91009

MTTF  = $\dfrac{720,000 \times 49.91009 \times 2}{1.833}$ = 39,209,238 Hours

Failure Rate = $\dfrac{1.833}{720,000 \times 49.91009 \times 2}$ = 2.55E-8

FITS = Failure Rate *1E9 = 26
