HIGH SPEED SINGLE SUPPLY OPERATIONAL AMPLIFIER

■ GENERAL DESCRIPTION

The NJM2742 is a single supply dual operational amplifier with a wide operation voltage range from 3V to 32V and high slew rate of 10v/μs. Further it has a low side output swing close to ground (VOL= 0.2V typ. at RL=2kΩ, V+=5V). The combination of these characteristics makes it well-suited for power supply units, motor driving units and others.

The NJM2742 is available in a wide variety of packages 8-lead DIP, and 8-lead surface-mount packages of SOP (DMP), SSOP and MSOP (TVSP).

Note: The common mode input voltage range of NJM2742 is shifted toward the V^- for single supply use. At the low operating voltage, the center potential of the V^+ and V^- may be out of the common mode voltage range. In this case, shift the common mode input voltage toward the V^-.
