

NPN Silicon Phototransistor

OP550, OP552, OP555, OP560, OP565, OP750, OP755 Series

Features:

- Wide receiving angle
- Four of sensitivity ranges
- Side-looking package
- Ideal for space-limited applications
- Ideal for PCBoard mounting
- Choice of clear, opaque or blue-tinted package

Description:

OP550, OP552, OP555, OP750, OP755, OP770 and **OP775** series consists of a NPN silicon phototransistor molded in an epoxy package with a wide receiving angle that provides relatively even reception over a large area. The **OP750, OP755, OP770** and **OP775** have additional circuitry to enhance the operation of the device for stray light levels.

OP560 and **OP565** series consists of a NPN silicon photodarlington transistor molded in an epoxy package with a wide receiving angle that provides relatively even reception over a large area.

The side-looking package design allows easy PCBoard mounting of slotted optical switches or optical interrupt detectors.

The **OP550, OP560, OP750** and **OP770** devices have an external lens in a clear epoxy package.

The **OP552** device has an integral lens in an opaque plastic package that is optically transparent to infrared light but opaque to visible wavelengths. This feature allows the device to be used under high ambient light conditions – or anywhere external light sources could interfere with the intended sensing application (visible light immunity).

The **OP555, OP565, OP755** and **OP775** devices have an internal lens in a blue-tinted package. The lensing effect of this package allows an acceptance half-angle of 28° when measured from the optical axis to the half-power point.

*These devices are 100% production tested using infrared light for close correlation with OPTEK's GaAs and GaAlAs emitters. All of these sensors are mechanically and spectrally matched to the **OP140, OP142, OP145, OP240** and **OP245** series of infrared emitting diodes.*

Please refer to Application Bulletins 208 and 210 for additional design information and reliability (degradation) data.

For custom versions please contact your OPTEK representative.

Applications:

- Applications requiring wide receiving angle
- Applications requiring PCBoard mounting
- Space-limited applications
- Optical switches
- Optical interrupt detectors
- Optical encoders
- Non-contact position sensing
- Machine automation

OP550, OP552, OP555, OP560, OP565, OP750, OP755 Series

Pin #	Sensor
1	Emitter
2	Collector

To avoid stress cracking, we suggest using ND Industries' **Vibra-Tite** for thread-locking. **Vibra-Tite** evaporates fast without causing structural failure in OPTEK'S molded plastics.

1. RMA flux is recommended. Duration can be extended to 10 seconds maximum when flow soldering. A maximum 20 grams force may be applied to the leads when soldering.
2. For OP550, OP560, OP555 and OP565, derate linearly 1.33 mW/°C above 25° C. For OP552, derate linearly 1.25 mW/°C above 25° C.
3. For all phototransistors in this series, the light source is an unfiltered GaAs LED with a peak emission wavelength of 935 nm. For OP550 and OP555 only, a radiometric intensity level that varies less than 10% over the entire lens surface of the phototransistor being tested applies.
4. To calculate typical collector dark current in μA , use the formula $I_{\text{CEO}} = 10^{(0.040 T_A - 3.4)}$, where T_A is ambient temperature in °C.
