

ALM-31122

700MHz - 1GHz

1-Watt High Linearity Amplifier

Data Sheet

Description

Avago Technologies' ALM-31122 is a high linearity 1 Watt PA with good OIP3 performance and exceptionally good PAE at 1dB gain compression point, achieved through the use of Avago Technologies' proprietary 0.25um GaAs Enhancement-mode pHEMT process.

All matching components are fully integrated within the module. This makes the ALM-31122 extremely easy to use. The adjustable temperature-compensated internal bias circuit allows the device to be operated at either class A or class AB operation.

The ALM-31122 is housed inside a miniature 5.0 x 6.0 x 1.1 mm³ 22-lead multiple-chips-on-board (MCOB) module package.

Notes:

Package marking provides orientation and identification

"31122" = Device Part Number

"WWYY" = Work week and Year of manufacture

"XXXX" = Last 4 digit of Lot number

Features

- Fully matched, input and output
- High linearity and P1dB
- Unconditionally stable across load condition
- Built-in adjustable temperature-compensated internal bias circuitry
- GaAs E-pHEMT Technology^[1]
- 5V supply
- Excellent uniformity in product specifications
- Tape-and-Reel packaging option available
- MSL-3 and Lead-free
- High MTTF for base station application

Specifications

900 MHz; 5V, 394mA (typical)

- 15.6 dB Gain
- 47.6 dBm Output IP3
- 31.6 dBm Output Power at 1dB gain compression
- 52.5% PAE at P1dB
- 2 dB Noise Figure

Applications

- Class A driver amplifier for GSM/CDMA Base Stations.
- General purpose gain block.

Note:

1. Enhancement mode technology employs positive gate voltage, thereby eliminating the need of negative gate voltage associated with conventional depletion mode devices.

Attention: Observe precautions for handling electrostatic sensitive devices.

ESD Machine Model = 80 V

ESD Human Body Model = 200 V

Refer to Avago Application Note A004R: Electrostatic Discharge, Damage and Control.

Absolute Maximum Rating ^[2] T_A=25°C

Symbol	Parameter	Units	Absolute Max.
V _{dd, max}	Device Voltage, RF output to ground	V	5.5
I _{ds, max}	Device Drain Current	mA	750
V _{ctrl, max}	Control Voltage	V	5.5
P _{in, max}	CW RF Input Power	dBm	25
P _{diss}	Total Power Dissipation ^[4]	W	4.125
T _{j, max}	Junction Temperature	°C	150
T _{STG}	Storage Temperature	°C	-65 to 150

Thermal Resistance ^[3] $\theta_{jc} = 22\text{ }^{\circ}\text{C/W}$
(V_{dd} = 5V, I_{dd} = 400mA, T_c = 85 °C)

Notes:

2. Operation of this device in excess of any of these limits may cause permanent damage.
3. Thermal resistance measured using Infra-Red measurement technique.
4. Board (bottom of the device) temperature T_B is 25 °C. Derate 45.7mW/ °C for T_c > 59.3 °C.

Product Consistency Distribution Charts^[5, 6]

Figure 1. I_{ds}; LSL = 340mA, nominal = 394mA, USL = 440mA

Figure 2. OIP3; LSL = 45dBm, nominal = 47.6dBm

Figure 3. P1dB; LSL = 30dBm, nominal = 31.6dBm

Figure 4. PAE at P1dB; nominal = 52.5%

Figure 5. Gain; LSL=13.7dB, Nominal = 15.6dB, USL=17.3dB

Notes:

5. Distribution data sample size is 500 samples taken from 3 different wafers. T_A = 25°C, V_{dd} = 5V, V_{ctrl} = 5V, RF performance at 900MHz unless otherwise specified. Future wafers allocated to this product may have nominal values anywhere between the upper and lower limits.
6. Measurements are made on a production test board. Input trace losses have not been de-embedded from actual measurements.

Electrical Specifications ^[7]

$T_A = 25\text{ }^{\circ}\text{C}$, $V_{dd} = 5\text{V}$, $V_{ctrl} = 5\text{V}$, RF performance at 900MHz, measured on demo board (see Figure 7) unless otherwise specified.

Symbol	Parameter and Test Condition	Units	Min.	Typ.	Max.
I_{ds}	Quiescent current	mA	340	394	440
I_{ctrl}	V_{ctrl} current	mA	-	10.4	-
Gain	Gain	dB	13.7	15.6	17.3
OIP3 ^[8]	Output Third Order Intercept Point	dBm	45	47.6	-
OP1dB	Output Power at 1dB Gain Compression	dBm	30	31.6	-
PAE	Power Added Efficiency	%	-	52	-
NF	Noise Figure	dB	-	2.0	-
S11	Input Return Loss, 50 Ω source	dB	-	-14	-
S22	Output Return Loss, 50 Ω load	dB	-	-11	-
S12	Reverse Isolation	dB	-	-21	-

Notes:

7. Measurements at 900MHz obtained using demo board described in Figure 6 and 7.
8. 900MHz OIP3 test condition: $F_{RF1} - F_{RF2} = 10\text{MHz}$ with input power of -5dBm per tone measured at worse case side band.
9. Use proper bias, heat sink and de-rating to ensure maximum channel temperature is not exceeded. See absolute maximum ratings and application note (if applicable) for more details.
