Quick Reference Guide
AMP CT Connector Series

The AMP CT connectors are a miniature wire-to-board and wire-to-wire interconnect solution. The AMP CT connector series has proven performance in its harness making capability. A variety of harness-making machines are available ranging from hand tools for low volume production to high-speed automatic crimping machines for medium to high volume productions. AMP high-speed automatic crimping machines are easy to operate, eliminating the need for tedious work of changing parts inside the equipment to adapt to changes in harness styles. Two types of housings are available, including Crimp and Mass Terminated (MT), which are preloaded with insulation displacement contacts. The box or shrouded headers are highly resistant to scooping at mating/unmating.

FEATURES AND BENEFITS

- 2 kinds of termination method: IDC, Crimp
- Discrete wire interconnect
- Circuits range from 2-15 single row, 8-30 dual row
- AWG 22-30
- Kinks for self-retention on boards
- RoHS compliant
- Many components are recognized under the component program of Underwriters Laboratories Inc., file No. E28476
- Certified by Canadian Standards Association, File No. LR 7189

PRODUCT APPLICATIONS

- Business Equipment
- Industrial Machines
- PC
- Printer
- Fax
- C-TV
- Audio
- Air conditioner
- Anywhere where signals or power are routed

How to select an AMP CT connector part number

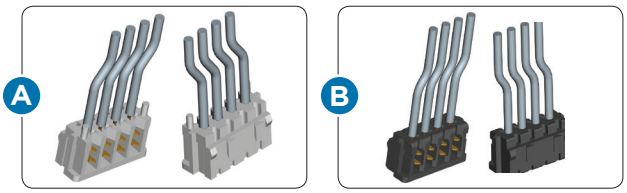
The charts on this page highlight the relationship between the number of contacts (positions) to the part number. Please see the sample chart below that was designed to help you select the correct part number for your needs. For single digit position to dash numbers, attach the digit to the end base number. For double digit position to dash numbers, attach the first digit to the front of the part number, add a dash and the base part number, then follow the base part number with a dash and the second digit.

Example Base Part Number	Your Criteria	Example Position to Dash Selection						End Part Number Based on Criteria
		Position	8	9	10	11	12	
173977	You require and 8 position MT housing	Dash Number	-8	-9	-10	-11	-12	173977-8
173977	You require and 12 position MT housing	Dash Number	-8	-9	-10	-11	-12	1-173977-2

Cable Side Connectors

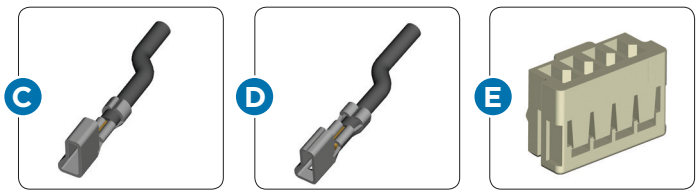
Mass Termination (MT) vs. Crimp Poke

MT AMP CT Housing



Shows unstripped wires inserted into an MT housing.

Crimp AMP CT Contact **Crimp AMP CT Housing**



Shows a contact crimped onto a stripped wire to be inserted into a crimp housing.

CRIMP TYPE CONNECTORS : Contacts

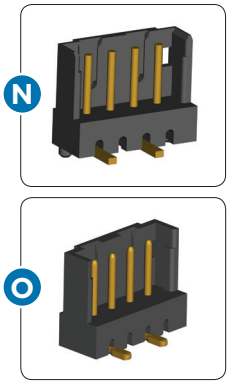
* Applicators listed are used in the AMP-O-LECTRIC Model G, AMP 3K/40 and AMP 5K/40 Terminators. Call the Tooling Assistance Center at 800-722-1111 for applicator numbers for Automatic Cut, Strip and Terminate Leadmakers.
** Power tooling options are also available. Call Tooling Sales at 888-777-5917 (717-810-2080) for more information

PCB Side Connectors (Single Row + Dual Row)

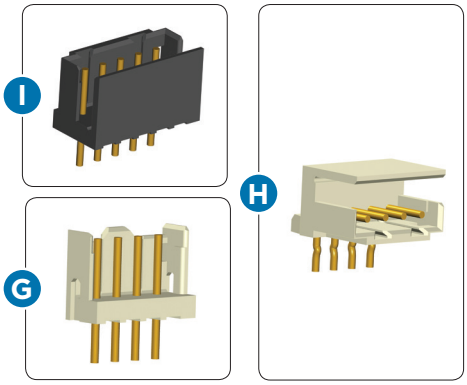
Common AMP CT Terminology

Locating Boss



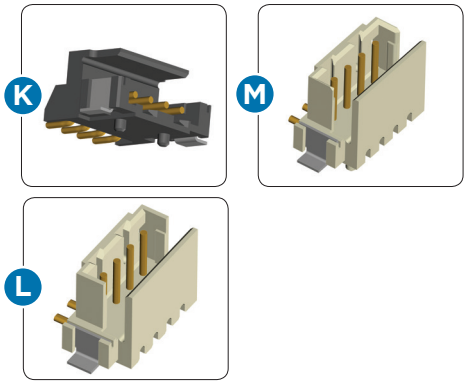
A boss is a mechanical feature that helps orientate the headers onto the PCB.

Without Kinked Leg / With Kinked Leg



Kinked legs are designed to secure the T/H headers onto the PCB.

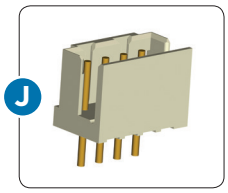
Solder Tabs



Solder tabs are designed to secure the SMT headers onto the PCB.

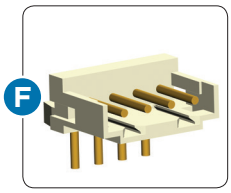
Header Styles

Box



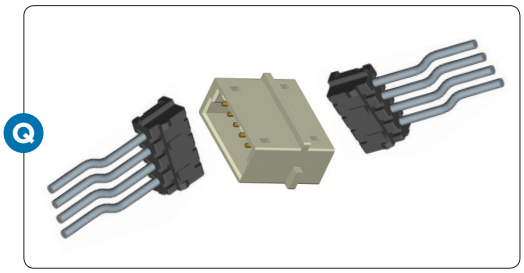
Box headers offer a front and back wall for polarization of the connector.

Standard

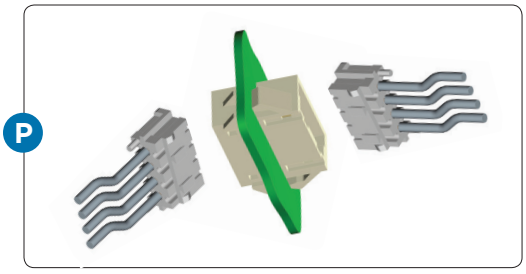


Standard headers offer only a single wall for polarization of the connector.

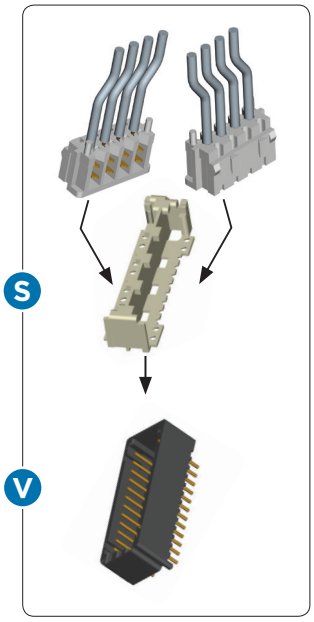
Free Hanging



Panel Mount



Dual Row Assemblies



Requires a holder to be used along with two single row housings.

Additional Parts

Frequently Asked Questions

What wire guage will you be using?
More flexibility with AWG when using Crimp vs. MT. Crimp housings accept 22-30 AWG and MT housings accept 24-28 AWG.

Are the connectors available for IDC?
Yes, we offer a MT version that is preloaded with IDC contacts.

Is your process automated?
MT housings are more suitable for automated processes.

Where can I find information on current rating, voltage and operating temperatures?
Please see Product Specification Information on page 5 of this Quick Reference Guide.

Which is a more standard header, with or without a locating boss?
The most standard headers tend to have a locating boss as it makes it easier for the customer to align the connector onto their board.

What special retention mechanisms are available to help ensure PCB stability?
Most of the T/H headers have kinked legs, and the SMT headers have solder tabs to help ensure PCB stability.

What are my tooling options?
TE offers comprehensive tooling options including Manual Pistol-Grips, manual Mini-Press, Pneumatic Mini-press, Semi-Auto DECAM and an Automatic DECAM tool. For more information, please visit tooling.te.com

What is the benefit of choosing Box over Std type headers?
Box type headers have an extra wall, that is a more reliable connector design intended to prevent stubbing.
