

2.5Gbps PCI Express Passive Switches

General Description

The MAX4888/MAX4889 high-speed passive switches route PCI Express® (PCIe) data between two possible destinations. The MAX4888 is a quad single-pole/double-throw (4 x SPDT) switch ideally suited for switching two half lanes of PCIe data between two destinations. The MAX4889 is an octal single-pole/double-throw (8 x SPDT) switch ideal for switching four half lanes of PCIe data between four destinations. The MAX4888/MAX4889 feature a single digital control input (SEL) to switch signal paths.

The MAX4888/MAX4889 are fully specified to operate from a single 3.0V to 3.6V power supply and also operate down to +1.65V. The MAX4888 is available in a 3.5mm x 5.5mm, 28-pin TQFN package. The MAX4889 is available in a 3.5mm x 9.0mm, 42-pin TQFN package. Both devices operate over the -40°C to +85°C temperature range.

Applications

Desktop Computers
Servers/Storage Area Networks
Laptops

PCI Express is a registered trademark of PCI-Sig Corp.

Features

- ◆ Single 1.65V to 3.6V Power-Supply Voltage
- ◆ Low Same-Pair Skew of 7ps
- ◆ Low 120μA (Max) Quiescent Current
- ◆ Supports PCIe Gen I Data Rates
- ◆ Flow-Through Pin Configuration for Ease of Layout
- ◆ Industry-Compatible Pinout
- ◆ Lead-Free Packaging

Ordering Information/ Selector Guide

PART	PIN-PACKAGE	CONFIGURATION	PKG CODE
MAX4888ETI+	28 TQFN-EP*	Two Half Lanes	T283555-1
MAX4889ETO+	42 TQFN-EP*	Four Half Lanes	T423590M-1

Note: All devices are specified over the -40°C to +85°C operating temperature range.

+ Denotes lead-free package.

*EP = Exposed paddle.

Typical Application Circuit appears at end of data sheet.

MAX4888/MAX4889

2.5Gbps PCI Express Passive Switches

ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND, unless otherwise noted.)

V+	-0.3V to +4V
SEL, COM _{__} , NO _{__} , NC _{__} (Note 1)	-0.3V to (V+ + 0.3V)
I COM _{__} - NO _{__} I, I COM _{__} - NC _{__} I (Note 1)	0 to 2V
Continuous Current (COM _{__} to NO _{__} /NC _{__})	±70mA
Peak Current (COM _{__} to NO _{__} /NC _{__})	
(pulsed at 1ms, 10% duty cycle)	±70mA
Continuous Current (SEL)	±30mA
Peak Current (SEL)	
(pulsed at 1ms, 10% duty cycle)	±150mA

Continuous Power Dissipation (T_A = +70°C)

28-Pin TQFN (derate 20.8mW/°C above +70°C)1666.7mW

42-Pin TQFN (derate 35.7mW/°C above +70°C)2857.1mW

Operating Temperature Range-40°C to +85°C

Storage Temperature Range-65°C to +150°C

Lead Temperature (soldering, 10s)+300°C

Junction Temperature+150°C

Note 1: Signals on SEL, NO_{__}, NC_{__} or COM_{__} exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V+ = 3.0V to 3.6V, T_A = -40°C to +85°C, unless otherwise noted. Typical values are at V+ = 3.3V, T_A = +25°C.) (Note 2)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
ANALOG SWITCH						
Analog-Signal Range	V _{COM_} , V _{NO_} , V _{NC_}		-0.1	(V+ - 1.2)		V

Detailed Description

The MAX4888/MAX4889 high-speed passive switches route PCIe data between two possible destinations. The MAX4888/MAX4889 are ideal for routing PCIe signals to change the system configuration. For example, in a graphics application, the MAX4888/MAX4889 create two

sets of eight lanes from a single 16-lane bus. The MAX4888/MAX4889 feature a single digital control input (SEL) to switch signal paths.

The MAX4888/MAX4889 are fully specified to operate from a single 3.0V to 3.6V power supply and also operate down to 1.65V.

Digital Control Input (SEL)

The MAX4888/MAX4889 provide a single digital control input (SEL) to select the signal path between the COM_ and NO_/NC_ channels. The truth tables for the MAX4888/MAX4889 are depicted in the *Functional Diagrams/Truth Table* section. Drive SEL rail-to-rail to minimize power consumption.

Analog Signal Levels

The MAX4888/MAX4889 accept standard PCIe signals to a maximum of $V_+ - 1.2V$. Signals on the COM_ channels are routed to either the NO_+ or NC_+ channels, and signals on the COM_- channels are routed to either the NO_- or NC_- channels. The MAX4888/MAX4889 are bidirectional switches, allowing COM_, NO_, and NC_ to be used as either inputs or outputs.

Applications Information

PCIe Switching

The MAX4888/MAX4889 primary applications are aimed at reallocating PCIe lanes (see Figure 5). For example, in graphics applications, several manufacturers have found that it is possible to improve performance by a factor of nearly two by splitting a single 16-lane PCIe bus into two 8-lane buses. Two of the more prominent examples are SLI™ (Scaled Link Interface) and CrossFire™. The MAX4889 permits a computer motherboard to operate properly with a single 16-lane graphics card, and can later be updated to dual cards. The same motherboard can be used with dual cards where the user sets a jumper or a bit through software to switch between single- or dual-card operation.

Board Layout

High-speed switches require proper layout and design procedures for optimum performance. Keep design-controlled impedance PCB traces as short as possible or follow impedance layouts per the PCIe specification. Ensure that power-supply bypass capacitors are placed as close to the device as possible. Multiple bypass capacitors are recommended. Connect all grounds and the exposed pad to large ground planes.
