

AO3409 P-Channel Enhancement Mode Field Effect Transistor

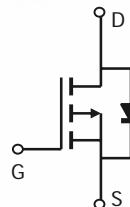

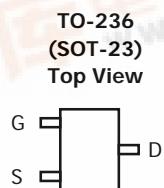

General Description

The AO3409 uses advanced trench technology to provide excellent $R_{DS(ON)}$ and low gate charge. This device is suitable for use as a load switch or in PWM applications. Standard Product AO3409 is Pb-free (meets ROHS & Sony 259 specifications). AO3409L is a Green Product ordering option. AO3409 and AO3409L are electrically identical.

A: The value of R_{bJA} is measured with the device mounted on 1in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$.

The value in any given application depends on the user's specific board design. The current rating is based on the $\leq 10\text{s}$ thermal resistance rating.

B: Repetitive rating, pulse width limited by junction temperature.

C. The R_{bJA} is the sum of the thermal impedance from junction to lead R_{JUL} and lead to ambient.

D. The static characteristics in Figures 1 to 6,12,14 are obtained using 80 μs pulses, duty cycle 0.5% max.

E. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with $T_A=25^\circ\text{C}$. The SOA curve provides a single pulse rating.
