YOKOGAWA

## YOKOGAWA Supplies A Complete Line of Precise Panel Meters . . .

### Elapsed Time Meters

Devices will match the frequency of AC power systems. Six-digit counters record hours, tenths of hours, minutes and tenths of minutes. Reset or non-reset models available.

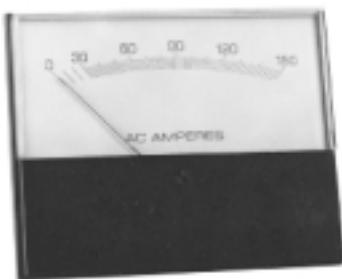

### Horizon Line Panel Meters

These meters possess the same precision qualities as New Big Look. In addition, Horizon Line panel meters can be front or rear mounted on panel.

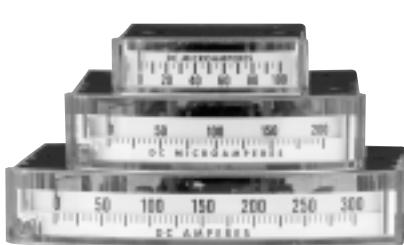

### New Big Look Panel Meters

These meters feature extra-wide scales, big bold numerals above the scale and divisions for unobstructed reading. Tapered needle-sharp pointers and shadow-free acrylic covers help to pinpoint values. Available in taut band and pivot and jewel types. Gasket sealer gives New Big Look dust and moisture resistant design. (Except 1½").

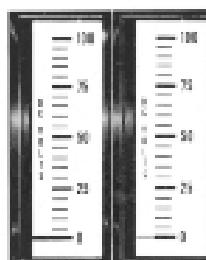

### Stylist Series Panel Meters

Available in Window mount or Surface mount styles. Optional bezels for Surface mount permit rear panel mounting. Standard movement torque to weight ratio is approximately 4 times greater than most other manufacturer's high torque versions.

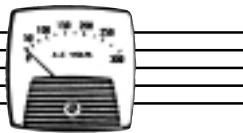

### Thin edgewise meters

Our thin element design provides the maximum performance in the smallest of spaces. Available in 1½" to 3½" sizes for vertical or horizontal mounting.

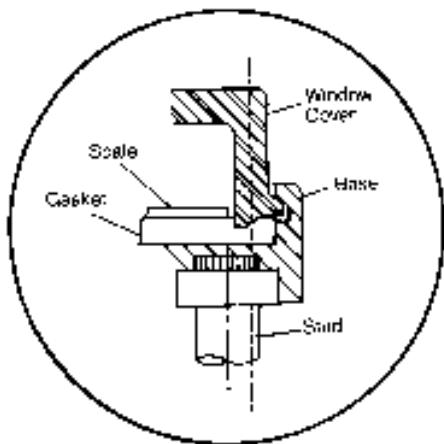

### Edgewise Meters

YOKOGAWA's answer to the squeeze for space problem. This design allows meters to be mounted vertically or horizontally. They can stand alone or be stacked in space-saving clusters. Built-in magnetic shielding prevents interference among meters and removes the burden of special calibration.

## Gasket Sealing Design Establishes A New Industry Standard

Dust resistant construction is now a standard feature of all New Big Look panel meters 2½"-4½" only. YOKOGAWA's unique gasket sealing design eliminates the need for a crimped bezel, providing for quick modification and scale changes while maintaining the integrity of the meters.

## Dust Resistant Construction

YOKOGAWA Big Look panel meters, except 1½", feature gasketed construction to seal out dust and other air-suspended damaging particles. Application is ideal for adverse environments. Special dust resistant features are included on all YOKOGAWA New Big Look meters, (except 1½"). For more severe applications, to meet UL-1437 or IEC 144 requirements, other models are also available upon request.

## Back-Of-Panel Mounting For Horizon Line

Horizon Line panel meters can be mounted either behind or in front of the panel. Behind-panel mounting is easy . . . just remove snap-off mask and mount. No special mounting hardware or bezel is required. This design feature improves panel appearance . . . saves time and money. When illuminated scales are required, simply position light source as shown, or in any suitable position along the edge of the instrument.

## Three Mounting Types Available in Stylist Series

- Rear Panel Window Mount
- Front of Panel Surface Mount
- Rear Panel Surface Mount Available with Optional Bezel

## Clean, Readable Case Design Provides Extra Safety

YOKOGAWA's brand New Big Look and Horizon Line panel meters are designed to provide attractive styling, quick, sure readability for any application . . . and a built in safety feature to help you meet national safety requirements. If you must remove the acrylic cover, you have to remove the instrument itself from the panel in order to reach the special safety screws holding on the cover. Removing the meter prevents shock hazard. This safety feature is standard on all New Big Look and Horizon Line meters.

## Suspension

### Taut Band

Taut band is a means of suspending the moving mechanism between two ribbons of metal, obviating the need for pivots, jewels and control springs found in conventional mechanisms. The absence of friction

resulting from this permits greater sensitivities and provides more rugged meters. Common failures of conventional meters subjected to shock testing are cracked jewels and/or blunted pivots. Taut band, without pivot and jewels, consequently, will withstand shock in excess of that specified for pivot and jewel meters. For example, ANSI Specifications for panel meters require 50G shock. Taut-band meters will withstand 100G shock.

### Pivot and Jewel

In this design the coil and pointer are supported by polished steel pivots at each end which fit into jewel bearings. Pivot and jewel meters are recommended for high-vibration environments because of the mechanism's inherent stability and strength. Accuracy and repeatability are almost equal to the taut-band's, and good performance from the pivot and jewel construction is the reason for its long popularity. Don't specify pivot and jewel meters for applications that involve high shock, but do take advantage of this meter's ability to withstand vibration.

### High-sensitivity DC Voltmeters

Standard DC voltmeter sensitivity is 1000 ohms/volt. Expressed differently, 1000 ohms/volt sensitivity means that the meter draws approximately one milliamp full-scale current.

Occasionally lower current drains are necessary, hence higher sensitivities may be required. The table below compares available sensitivities, maximum self-contained voltages, and approximate full-scale currents. The voltage range could be extended by using external resistors.

### Maximum and Minimum Ratings

In general, the maximum and minimum ratings of current and voltage are those listed in "Ratings." Listed are rating limits for self-contained meters.

Ratings greater than those listed can be accomplished by use of external shunts, resistors or transformers. Meters to be used with external accessories are shown in "Ratings." See page 29 for Shunts, resistors and Transformers.

## Expanded-scale Voltmeters

For very close monitoring of voltages, Zener diode expanded scale voltmeters are available in 3½- and 4½-inch sizes for AC and DC ratings. Accuracy is ±0.5% of full-scale value. Standard voltage spans are listed in "Ratings."

Expanded scale voltmeters can be furnished for any mid-span values from 12 to 300 volts. Minimum span is 16% of mid-span value.

### Frequency Effect — AC Meters

Iron vane voltmeters are sensitive to frequency and should not be used on frequencies other than design frequency. (Standard voltmeters are calibrated at 60 Hertz. Used at 50 Hertz, accuracy becomes ±2½%. There are also 150- and 300-volt ratings listed which are calibrated at 400 Hertz.) For calibrations at frequencies other than 60 and 400 Hertz, refer to factory.

All Iron-vane ammeters (which produce a conventional scale distribution with divisions crowded in lower third of scale) from 10 milliamperes to 50 amperes are virtually unaffected by a change in frequency; e.g., a stock ammeter (calibrated at 60 Hertz) when used at 400 Hertz incurs an additional error of only .5 percent full-scale. If used on 1000 Hertz, the additional error is 4 percent. We recommend use of stock (60 Hertz) ammeters on any frequency in the range of 25 Hertz to 400 Hertz. For calibration at frequencies outside the 25-Hertz to 400-Hertz range, refer to factory or use a rectifier-type AC ammeter.

### Rectifier-type Meters

Rectifier-type meters differ from iron-vane mechanisms in that:

- They provide a nominally linear (DC) scale rather than conventional iron-vane distribution which has a slight crowding at low end of scale.

- AC current measurements of microamperes and milliamperes at minimum power consumption are permitted.

- AC voltmeters of higher sensitivity (ohms/volt) than iron-vane types can be made.

- Frequency response of rectifier type meters is essentially flat from 20 to 1,000 Hertz (1% effect from reference to 60 Hertz). Rectifier-type meters employ a full-wave rectifier and are available in ratings of 500µA to 30A.

### Suppressed-zero DC Meters

DC meters can be mechanically suppressed up to 20% of end-scale value. However, additional errors are introduced by suppressions: e.g.,

Errors at 20% suppression = ±3% of end-scale

Many process transmitters in use today provide a 4-20mA signal (occasionally 10-50 mA or 1-5mA) and require a suppressed-zero meter with operating zero set. These are known as "live-zero" and are standard.

### Higher Accuracy

Standard calibration accuracy is ±2% of full scale. DC meters can be calibrated to ±1% of full scale as a special model in 3½" and 4½" with mirrored scale.

### Conduit Mounting Case — 2½-inch New Big Look Meter

Available only for 2½-inch Type 250 panel meters, for indoor or outdoor use, the conduit-mounted case provides protection to the meter under severe environmental conditions. The conduit case is both sealed and weatherproof and is pre-drilled, ready for mounting of separately ordered panel meters. Assembly of meter into case is done by purchaser. ## YOKOGAWA ♦ Horizon Line

Type 251 and 255  
Horizon Line

### Specifications

**Accuracy:** All DC and AC iron-vane; ±2% of full-scale, AC rectifier type; ±3% of full scale (with 60 Hz sine wave at 25° C). When standard 60 Hz iron vane ammeters are used at the extreme limits of 20 or 400 Hz, additional error (approx. .75%) may be experienced. Expanded-scale voltmeters; ±.5% of full scale value.

**ANSI Specification:** All meters meet ANSI Specifications C-39.1.

**Overload:** Voltmeters (AC and DC) - 50% momentary, 20% sustained. Ammeters (AC and DC) momentary: 10 times the rated current for 10 consecutive intervals of .5 second with a 1 minute interval between successive applications; sustained: 20% for six hours.

**Scale Data:** 90 degree rotation.

#### Scale Length:

Size	Horizon Line
1½"	1.50"
2½"	2.06"
3½"	2.88"
4½"	3.93"

**Insulation Level:** All meters (except 1½"), 2600 VRMS Hi-pot, 1½"-1500 VRMS Hi-pot.

**Burden Data:** AC ammeter-5 amps, 0.5 va max. 0.5 power-factor lagging, @60 Hz. AC Voltmeter-unity power factor.

**Response Time and Overshoot:** Response time: 3 seconds (max.) for 2½",

3½", 4½" size for microammeters: 2 seconds (max.) for all other DC ratings, and 2.5 seconds (max.) for AC ratings. Maximum of 40% overshoot.

**Dimensions:** See page 34-35.

#### How To Order

To Order Horizon Line panel meters use the appropriate catalog numbers provided in the tables. Taut band instruments have a 251 prefix number, Pivot & jewel instruments have a 255 prefix number, except AC Iron Vane prefix which is 251.

#### Ordering Examples:

1. 21/2", 300 V DC Voltmeter, zero left, taut band - 251 220 RXRX
2. 21/2", 300 V DC Voltmeter, zero left, pivot & jewel - 255 220 RXRX
3. 21/2", 300 VAC (Iron Vane) pivot & jewel - 251 244 RXRX

Severe-duty meters are available to meet UL 1437 requirements. UL/CSA version, with flame retardant window and base, is not offered in 1½". To order, add /UL or /CSA after catalog number, or contact factory. For ratings and scales not listed contact factory.

### 50-HERTZ RATINGS FOR NEW BIG LOOK

For 50 Hz service simply select the identical 60 Hz catalog number and change letters 7 & 8 as follows:

240213 \*\* AB

AA = 120V, 60 Hz  
AB = 208/240V, 60 Hz  
AC = 480V, 60 Hz  
AD = 120V, 50 Hz  
AE = 208/240V, 50 Hz  
AF = 480V, 50 Hz

### OPTIONAL 3-STUD MOUNTING

For 3-stud mounting option (3½" New Big Look only) simply select the identical 4-stud catalog number and change letters 9 & 10 as follows:

240313AA\*\*

AB = Std 4 stud mounting

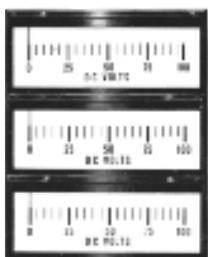

AC = Optional 3 stud mounting

Conduit case #2579K10G0700 can be ordered as a replacement item for the 240 25\*\*\*\* elapsed time meter assembly or for use with a 2½" Big Look meter.

8. Nonstandard lead resistance .....	X	N/A	X	X
Standard two-way shunt lead resistance for shunt-rated ammeters, 50 or 100 millivolt, is 0.065 ohms. Normally these meters can be used with a wide range of lead resistances with only very small additional errors. However, if calibration for a specific value of lead resistance other than 0.065 ohms is required, contact factory.				
9. Calibration for mounting at a specific angle .....	X	X	X	X
Special calibration not required for meters mounted 0 to 19 degrees from vertical position.

## Mounting In Your Present Panel Openings . . .

**Optional Front-Mounting Configurations**

The mounting studs on the New Big Look, Horizon Line and Stylist Series Surface Mount can be ordered to fit your existing panel openings at no extra cost. These cases are interchangeable with a wide variety of competitive instruments. Optional stud-placement configurations are shown at right and a cross-reference of many replacement instruments are listed on the next page. This built-in interchangeability eliminates the need for drawing changes, setups, and redrilling of panels . . . and it solves your instrument replacement problems.
