

Available in 4 series
Bore sizes 1/2" thru 12"
Strokes 1/8" thru 12"

5

Original Series

(shown right)

- Bores 1-1/8" thru 12"
- Strokes 1/2" thru 12"
- Forces to 44,000 lbs. (22 tons!)

Pancake® Series

(see pages 5.13 to 5.17)

- Bores 1/2" thru 4"
- Strokes 1/8" thru 1-1/2"
- Forces to 7,186 lbs

Square1® Series

(see pages 5.18 to 5.22)

- Bores 3/4" thru 2"
- Strokes 1/8" thru 2-1/2"
- Forces to 870 lbs.

Longstroke™ Series

(see pages 5.23 to 5.28)

- Bores 2" thru 4"
- Strokes 1/2" thru 12"
- Forces to 7,186 lbs

Duralon® Rod Bearings Excel

Features & Benefits

- More force from available shop air Eliminates hydraulics – stays clean
- Multiple pistons on the power stroke Saves mounting space (44 to 75%)
- Single piston on the retract stroke Saves air (22 to 37%)
- Building block design Low cost – Quick delivery – Specials
- Wide range of models, sizes and options . . . Adapts to your application requirements
- Corrosion resistant construction Long life – clean appearance
- Internally lubricated dynamic seals Smooth operation and long product life
- Duralon rod bearings See chart above – extended product life
- Hard anodized ID cylinder tubing More cycles – less wear
- 2 Year warranty Extended buyer protection

How it works

Fabco-Air attaches multiple pistons to a common shaft and provides **internal** air passages through the shaft to all pistons. Thus, when shop air pressure is applied to the extend port, all pistons are pressurized simultaneously enabling tremendous thrust forces to be obtained.

See the handy sizing guide below for available force multiplying factors (column 3 – Total Effective Piston Area) and maximum operating pressures for various cylinder bore sizes.

Sizing Example

MP3 X 1 X 3 X 1 FF

Piston Area is 20.3 sq. in.

Force = Pressure x Area

If Supply Air Pressure is 100 psi,

then Force = 100 psi x 20.3

or Force = 2030 lbs

5

Notes

★ Areas given are for Multiple Stage Extend - Single Stage Retract with a Single Rod. For Single Stage Extend - Multiple Stage Retract and any Double Rod Models, deduct the rod area shown.

† Areas given are for Standard Single Stage Retract. For Single Stage Extend with a single rod, add the rod area shown.

Ratings – Standard Units

- Duralon® rod bushing. (see page 5.1 for table of physical properties)
- Female rod end with wrench flats
- Internally lubricated Buna-N O-ring piston and rod seals.
- Airline lubrication recommended
- Media Air
- Max. operating pressure See chart
- Min. pressure recommended 20 psi
- Ambient & media temp. -25° to +250°F
- Prelubrication Magnalube®-G Grease

Basic Construction

Multiple Stage Extend with Single Stage Retract

Multiple Stage Retract with Single Stage Extend

Quick Reference to Components

No.	Description
1	Cylinder tube seal
2	Atmospheric vent
3	Piston rod
4	Air passage between stages
5	Center stud, high tensile, plated
6	Stainless steel tie rods and plated steel nuts
7	Piston stop
8	Cap End Plug, aluminum, black anodized
9	Nut, plated steel
10	Piston Rod Pilot Washer locates piston to maintain precise concentricity
11	Cap end head, aluminum, black anodized
12	Cylinder tube, aluminum
13	Baffle, aluminum
14	Baffle seal, Buna-N O'Rings, -25° to + 250°F
15	Piston seal, internally lubricated O'Ring
16	Piston rod seal, internally lubricated O'Ring
17	Center shaft seal, internally lubricated O'Ring
18	Piston, aluminum
19	Piston air slot, note direction of air flow
20	Rod end head, aluminum, black anodized
21	Piston rod bushing, anodized aluminum housing with Teflon® lined Duralon® insert

Cylinder OD – is clear anodized aluminum for corrosion resistance and an attractive appearance.

The Bore ID is Hard Anodized – Hard anodizing is an electrochemical process which provides a very dense surface of aluminum oxide that actually impregnates the base aluminum. It forms an extremely hard (60 Rc) surface with a low coefficient of friction. Hardness, corrosion resistance and wear resistance exceeds that of chrome plated steel.

An Extra Long Rod Bearing – provides long and rigid support for the piston rod. The bearing material is Duralon® on all bore sizes. See page 5.1 for a chart comparing the exceptional physical properties of Duralon® to other, less durable, bearing materials.

The Piston Rod – is Hard Chrome Plated Stainless Steel. Surface finish is 12 RMS or better. The standard rod end is fine female thread tapped and has long wrench flats.

Piston Construction – The piston is aluminum for light weight. The piston rod pilot end and a pilot washer enable bolting the assembly securely while maintaining precise concentricity for smooth cylinder performance.

Dynamic Seals – Internally lubricated O'Rings are compounded to provide extra long wear, lower breakaway (starting) and running friction, and smoother operation. In tests, cylinders with these seals have extended cycle life 2 to 3 times beyond cylinders with standard Buna-N seals.

Multiple Stages Extend & Multiple Stages Retract (Not available on 10" and 12" bores)

When required return forces (Extend or Retract) are greater than the standard single piston can provide, multiple stages (pistons) can be pressurized. This is accomplished by replacing one or more of the standard baffles with a ported baffle as shown in the illustration. When these thicker baffles are used, the overall length ("Dimension A") increases. See the chart below for port size and dimension details.

Example: Model MP3X1X3X2FF

5 See pages 5.5 for Dimension "A"

Bore	Port	Add to Dimension "A" for each Ported Baffle
1-1/8"	1/8 NPT	.50"
1-5/8"	1/8 NPT	.50"
2-1/2"	1/4 NPT	.50"
3"	1/4 NPT	.50"
4"	1/4 NPT	.50"
5"	1/4 NPT	.50"
6"	1/4 NPT	.50"
8"	1/2 NPT	1.00"

Available Combinations	No. of Ported Baffles	Total No. of Stages	Notes:
2 X 2	1	2	
3 X 2	1	3	When any of these combinations are ordered, the proper number of ported baffles are included.
3 X 3	2	3	
2 X 3	1	3	As standard, the largest number of stages are internally connected.
4 X 2	1	4	
4 X 3	2	4	On models with the same number of extend and retract stages, the extend stages are internally connected.
4 X 4	3	4	
3 X 4	2	4	
2 X 4	1	4	

Applications that may dictate the use of Ported Baffles

- Clean rooms, Vacuum Chambers, Wash Down Areas, Under Liquid, Dirty or Corrosive Environments

Filters can be installed in the ports of stages not requiring pressurization, or they can be plumbed to a common filter or point outside the critical environment.

- Increase Cycle Speeds

The ports have higher air flow capacity than the vents in the standard baffle.

- Selective Force Application

With control circuitry, the number of stages that are pressurized (thus the amount of force being applied) at any given time can be selected and varied. Consult engineering with application details.

Male Rod Thread

Single Rod

Double Rod, Rod End Only

Double Rod, Cap End Only

Double Rod, Rod & Cap Ends

Option

-MR

-MR

-MR1

-MR2

For bores 1-1/8" thru 8", a high strength stud is threaded into the standard female rod end and retained with Loctite®. This method eliminates the small diameter thread relief area normally required when machining male threads. This provides a much stronger

rod end which can be repaired, rather than replacing the complete rod, should the thread be damaged. For 10" and 12", the thread is machined integral with the rod.

BORE	THREAD
1-1/8"	5/16-24 x .63
1-5/8"	3/8-24 x .88
2-1/2"	1/2-20 x 1.00
3"	1/2-20 x 1.00
4"	1/2-20 x 1.00
5"	3/4-16 x 1.50
6"	3/4-16 x 1.50
8" standard	1-12 x 1.50
8" optional†	1-14 x 1.50
10"	1-1/2-12 x 2.25
12"	1-1/2-12 x 2.25

†Note: Male rod callout must be preceded by "-KF"

Double Rod

Option -DR

H + stroke
See page 5.5 for dimension "H".
Typical for ALL bores and ALL mounting styles.

Standard piston rod and rod bushing on both ends of the cylinder.

For 8" bore only, when -KF is specified, 1"-14 threads will be applied at both ends.

*Note: 10" & 12" Bores for Position Indication Only—
Rod Thread 3/8-16 x 5/8 Deep*

Use when attachment to both ends of the cylinder is required, or to indicate piston position. Also see Option -E on page 5.12.

Viton Seals

Option -V

Use for elevated temperatures (–15° to +400°F) or compatibility with exotic media. Consult engineering for compatibility information.

Nonrotating Rod

Option -NR

A stainless steel hex rod and a hex broached bushing of SAE 660 bearing bronze replaces the standard round rod and bushing.

A ported baffle is used so the piston assembly can be retracted by the next piston back from the rod end. The normal rod head port becomes an atmospheric vent. The tolerance on rotation is $\pm 1^\circ$.

The hex rod design does allow for some torque loading on the shaft.

However, torque loads that induce side loading should be minimized for best overall life and performance.

Available Combinations	No. of Ported Baffles	Total No. of Stages
2 X 1	1	2
3 X 1	1	3
3 X 2†	2	3
4 X 1	1	4
4 X 2†	2	4
4 X 3†	3	4

† Note: Not applicable to 10" and 12" bores

See page 5.5 for Dimension "A"

Nonrotating Double Rod

Option -NRDR

A combination of the Options –NR and –DR as shown above. The rod end rod is Hex and the cap end rod is round. The ported baffles are included and the "Dimension A" adjustments shown for Option –NR must be made. Extended piston areas must also be reduced by the rod area.

Adjustable extend stroke

Option -AS

For strokes through 6"
Full stroke adjustment is standard.

Note!

To maintain operator safety features of this option, it is NOT available with mounting styles: WR and WFR. Use caution when mounting to avoid creating pinch points.

Not available with mounting styles PM and SM.

Not available for 10" & 12" bores

Dial-A-Stroke® provides a rugged and precision adjustment of the extend stroke of the cylinder. The stop tube, adjustment nut with skirt, and minimum clearances combine to eliminate pinch points, thus providing operator safety. **Note!** Use caution when mounting to avoid creating pinch points with other parts of your machine design.

The stop tube is black anodized aluminum, the adjustment nut is blackened steel with a black anodized aluminum skirt, and the nut stop is red anodized aluminum; all for corrosion resistance and appearance. The adjustment nut, steel for long life, includes a lock screw with a plastic plug so that the adjustment nut can be locked in place without damaging the threads. The nut stop is mounted on the end of the adjustment rod so that the nut cannot come off. The fine pitch threads on the adjustment rod and nut provide precision adjustment. (See dimension "BF"). Adjustment settings are simplified by convenient scale markings applied to nut skirt and stop tube.

Rubber Bumpers

Option

Rod End only -BF
Cap End only -BR
Both Rod & Cap Ends -BFR

A rubber doughnut is bonded to the cylinder head to act as the piston stop and absorb the impact of the piston. This reduces noise and absorbs energy, thus reducing damage to the cylinder and tooling due to pounding. The amount of rubber that extends beyond the normal piston stop is designed to compress and allow full stroke of the cylinder at 60 to 80 psi. If your application uses lower pressure or has high energy, consult engineering with application details so that rubber mass can be adjusted to meet your specific requirements.

Because of the temperature limitations of the adhesives involved (-25° to +225°F), rubber bumpers are available in cylinders with standard internally lubricated Buna-N seals only.

Use where noise reduction and impact absorption is desired.

Note! On applications such as punching, shearing, setting blind rivets, etc., where high forces are built up and then released VERY quickly, the proper method of "catching" this type of load is to adjust the cylinder piston and the tooling so that at the point of breakthrough the piston is very close to the bumper. This reduces the dynamic load that the piston and bumper are required to absorb.

Extend Port Bushing

3/8 NPT	(2-1/2" – 6" bores)	-E38
1/2 NPT	(2-1/2" – 6" bores)	-E12
3/4 NPT	(5" – 12" bores)	-E34

Dimensions (inches)

12	.50	2.75	2.25	–	–	✓

The cap end plug is replaced with an extended plug of black anodized aluminum with a female NPT port. The standard cap end port is plugged.

Use for plumbing convenience, or when higher air flows are required for higher cycle speeds.

1/2 NPT Ports in Heads

2-1/2", 3", 4", 5", & 6" Bores only

Rod End Head	-TF
Cap End Head	-TR
Both Heads	-TFR

3/4 NPT Ports in BOTH Heads

8", 10" & 12" Bores only

For 2-1/2" thru 6" bores, thicker heads (to accept 1/2 NPT ports) replace the standard heads. Because of the thicker heads, there is an increase in Dimension "A" and a reduction of the rod extension as charted below. With this construction, an O'Ring replaces the fiber gasket cylinder tube seal.

For 8", 10" and 12" bores, 3/4 NPT ports are applied to standard heads.

Use when higher cycle speeds are required.

See pages 5.5 & 5.6 for Dimension "A"

High Flow Vents

Option -HF

The atmospheric vent in the baffle is cut larger to provide less resistance to the air flow.

Use when higher cycle speeds are required.

Speed & Shock Control

Using Hydraulics

Option -HS

Available in 2-1/2" through 12" Bore

Temperature range: -25° to + 250°F

Available with Viton seals

Add -V

Temperature range: -15° to +400°F

Note!!!

All 4-Stage Units 2-1/2" thru 10" Bores are rated at 120 psi maximum air input! 12" Bore, 3-Stage is rated at 130 psi max. 12" Bore, 4-Stage is rated at 100 psi max.

Series MP	Bore	Add to "A" Pg 5.5 & 5.6
	2-1/2", 3", 4"	0.50"
	5"	0.25"
	6"	0.50"
	8"	0.25"
	10", 12"	0.00"
MLR, MLS	Bore	Add to "B" Pg 5.24
	2, 2-1/2", 3", 4"	0.50"

When Multi-Power® cylinders are applied to applications such as punching or shearing, high inertial and impact forces are often encountered. To capture these potentially destructive forces, and prevent possible damage to tooling and cylinder specify Option -HS.

The seals on the piston, piston rod and tube are increased in the **single return stage** (retract or extend) and fluid is used to control speed and shock. Fluid from an air-over-oil tank is used for the return media. This fluid passes through a resistance, such as a flow control, which provides speed control of the cylinder. When the material shears and the cylinder tries to complete its stroke, the non-compressible fluid resists rapid movement, providing shock and speed control. Note the circuits shown below.

1/2 NPT Porting is available for 2-1/2", 3", 4", 5", & 6" Bores;
3/4 NPT Porting is available for 10" & 12" Bores

Additional Rod Seal, Polypak®
SAE 660 Bronze Bushing

Standard Rod Seal, O'Ring

The Polypak® seals combine an automatic lip seal with an O'spring energizer for excellent sealing from 0 to 500 psi.

Application Tips

Two Speed & Shock Control

Single air/oil tank with sequence, needle and shut-off valves give:

1. Rapid "Extend" stroke.
2. Automatic switch to controlled rate when resistance is met and pressure builds up.
3. Fluid catches cylinder when built-up forces are suddenly released (such as in punching applications), thus controlling the shock that could otherwise occur.

Always use 2-hand anti tie-down systems for operator safety!
Consult your local distributor for information and product delivery

One Speed Circuit

Single air/oil tank and flow control valve give hydraulic control with speed control on "Extend" stroke with rapid rate on "Retract" stroke.

Magnetic Piston Option -E Specifies Magnetic Piston (Order Sensors and Sensor Clamps Separately)

- **Option -E** consists of a magnet bonded into the piston head. When the piston magnet moves past an external sensor, the magnetic field activates the sensor without physical contact.
- **Mounting** – The sensor is attached to a 2-part clamp that attaches rigidly to a tie rod and can be positioned anywhere along the length of the cylinder for very precise signaling.
- Two sensor styles are used – (a) the **9-2A197 Series** for 1-1/8" thru 3" bores requires a tie rod clamp, and (b) the **749 Series** which accommodates the larger diameter tie rods of the 4" thru 12" bores with an integral clamp.
- **Reliability** – The annular piston magnet is permanently bonded into a groove in the piston. It is a polarized permanent magnet of rubber bonded barium ferrite that is very stable and is not affected by shock. Under normal usage it will remain magnetized indefinitely.
- **Warning** – External magnetic fields and/or ferrous objects may affect the strength of the piston magnet therefore affecting sensor actuation and piston position indication. Labels noting this are affixed to the cylinder.
- **Please note there is an increase in base length of the cylinder to accommodate the magnet. Using the table below add 'L' to Dimension 'A' on pages 5.5 & 5.6**

(T) Clamp Stick Out & (L) Length Adder to Dim. 'A' Pgs. 5.5 & 5.6

Pro-Coat™

Electroless Nickel plating

Option -N

Electroless Nickel plating is a hard, smooth, corrosion & wear resistant coating that will often suffice for applications where stainless steel is specified. The coating is a high nickel low phosphorous alloy deposited by chemical reduction without electric current that is more

corrosion resistant than plated nickel. Its lasting luster provides high eye appeal. It has natural lubricity & high resistance to abrasion. Standard hardness of the coating is approximately 49 Rockwell C. Heat treating can increase hardness to 60 Rockwell C.

Consult Engineering for specific application requirements

Series MK Option Specifications

External Guide, Nonrotating

Option -G

Superior nonrotating piston rod feature for applications such as package placement, figure stamping, and any application where anti-rotation and registration are critical as the piston is extended and retracted.

A mounting block is bolted to the piston rod. This block has two square pins mounted to it which in turn pass through guide blocks mounted on the sides of the cylinder.

Note! Use caution when mounting to avoid creating pinch points with other parts of your machine design.

Rubber Bumpers

Rod End Only
Cap End Only
Both Ends

Temperature Range
(-25° to + 220°F)

-BF
-BR
-BFR

A donut or pad of rubber is bonded in place to reduce noise and absorb energy, thus reducing destruction of the cylinder and tooling due to pounding. See complete description of benefits on page 5.9.

Standard rubber mass will compress and give full stroke at 60 to 80 psi. This mass can be adjusted to meet your specific pressure and/or dynamic load requirements.

Extend Port Bushing

-E38

Use when higher cycle speeds are required.

3/8 NPT for 2" Bores & Larger

1/4 NPT Ports

-P14

for 1-5/8" Bores & Larger

Magnetic Piston

Option -E

For 1-1/8" Bore and larger
Includes Dovetail Mounting Slots

Order Sensors Separately

A single slot on longer stroke models has room to accommodate multiple sensors.

Shorter stroke cylinders are furnished with two dovetail mounting slots when Suffix Option "E" is specified.

MK1-1/8

MK1-5/8

MK2

MK2-1/2

MK3

MK4

1/8" to 1" stroke models have 2 mounting slots. 1-1/2" stroke models have 1 slot at position #1. Ports are in-line for all Bores, all Strokes.

Low Profile, Solid State, Magnetic Piston Position Sensors

Temperature Range:
-20° to +80°C (-4° to +176°F)

Female Cordsets for Quick Disconnect	Length	Part No.
	1 Meter	CFC-1M
	2 Meters	CFC-2M
	5 Meters	CFC-5M

Sensor housing rated NEMA 6/IP67. Encased in plastic housing, dovetail style sensors are corrosion resistant. 60° wire outlet allows close mounting. Profile shown here is typical.

Ordering Guide – Dovetail Style Magnetic Sensors

Cylinder Model	Sensor Type	Prewired 9 ft. Part No.	Quick Disconnect Part No.*	LED	Electrical Characteristics
Series MK	Electronic	949-000-031	949-000-331	Yes	Sourcing, PNP, 5-28 VDC, 0.20 Amp Max current, 1.0 Voltage Drop
	Electronic	949-000-032	949-000-332	Yes	Sinking, NPN, 5-28 VDC, 0.20 Amp Max current, 1.0 Voltage Drop

Note*: Quick disconnect style sensors are supplied with 6" pigtail. Order female cordsets separately.

Double Rod

Option -DR

G + stroke

Standard piston rod and rod bushing on both ends of the cylinder.

Bore	1/2"	3/4"	1-1/8"	1-5/8"	2"	2-1/2"	3"	4"

External Guide, Nonrotating

Option -G

Superior nonrotating piston rod feature for applications such as package placement, figure stamping, and any application where anti-rotation and registration are critical as the piston is extended and retracted.

A mounting block is bolted to the piston rod. This block has two square pins mounted to it which in turn pass through guide blocks mounted on the sides of the cylinder.

- Square guide pins are hard chrome plated

steel for long wear and corrosion resistance.

- Guide blocks are hard anodized aluminum for long wear and corrosion resistance.
- Clearance in guide block mounting holes provide for adjustment and backlash control, compensation for wear, and minimal rotation.
- Extended distance between guides provides superior nonrotation and support.
- Extended piston rod provides clearance between cylinder and guide bar mounting block to eliminate pinch points.

Magnetic Piston Option-E Includes Dovetail Mounting Slots Order Sensors Separately

- **Dovetail style sensors** are actuated by a magnetic piston.
- Sensor dovetail slides into a mating slot on the cylinder body, is positioned as desired, and locked in place with a slotted set screw.
- Magnetic piston and 1/4" Dovetail mounting slot(s) are specified with Suffix Option "E" in the model number.
- **Order sensors separately.**

5

Double Rod Option -DR

Standard piston rod and rod bushing on both ends of the cylinder.

Use when attachment to both ends of the cylinder is required, or to indicate piston position location. Also see Option –E on page 5.28.

Male Rod Thread Option

Single Rod **-MR**

Double Rod, Rod End Only **-MR**

Double Rod, Cap End Only **-MR1**

Double Rod, Rod & Cap Ends **-MR2**

A high strength stud is threaded into the standard female rod end and retained with Loctite®. This method eliminates the small diameter thread relief area normally required when machining male threads. This provides a much stronger rod end which can be repaired, rather than replacing the complete rod, should the thread be damaged.

Bore	Thread
2"	1/2–20 x 1.00
2 1/2"	1/2–20 x 1.00
3"	1/2–20 x 1.00
4"	1/2–20 x 1.00

Rubber Bumpers Option

Rod End only **-BF**

Cap End only **-BR**

Both Rod & Cap Ends **-BFR**

A rubber doughnut is bonded to the cylinder head to act as the piston stop and absorb the impact of the piston. This reduces noise and absorbs energy, thus reducing damage to the cylinder and tooling due to pounding.

Standard rubber mass will compress and give full stroke at 60 to 80 psi. This mass can be adjusted to meet your specific pressure and/or dynamic load requirements.

Series MLR & MLS Option Specifications

Adjustable extend stroke

Option -AS

Available all Bores.
For strokes through 6"
Full stroke adjustment is standard.

Note!

To maintain operator safety features of this option, it is **NOT** available with mounting styles: WR and WFR.
Use caution when mounting to avoid creating pinch points.

Note: NOT available with mounting styles PM and SM

See complete description on page 5.9.

3/8 NPT Ports in Heads Option -P38

Use 3/8 NPT ports for higher flows, air over oil systems, etc.

Nonrotating Rod Option -NR

A stainless steel hex rod and a hex broached bushing of SAE 660 bearing bronze replaces the standard round rod and bushing.

A ported baffle is used so the piston assembly can be retracted by the next piston back from the rod end. The normal rod head port becomes an atmospheric vent. The tolerance on rotation is $\pm 1^\circ$.

The hex rod design does allow for some torque loading on the shaft. However, torque loads that induce side loading should be minimized for best overall life and performance.

Hex rod flats have Random Rotation relative to Mounting Pattern

See page 5.24 for Dimension "B".

Available Combinations	No. of Ported Baffles	Total No. of Stages
2 X 1	1	2
3 X 1	1	3
3 X 2	2	3
4 X 1	1	4
4 X 2	2	4
4 X 3	3	4

Bore	Retract Port	Add to Dimension "B" for each Ported Baffle	Hex Rod Across Flats	St'd Ports VC	VH max	3/8 NPT Ports (-P38) VC	VH max
2"	1/4 NPT	.50"	.75"	.65	.69	.80	1.56
2-1/2"	1/4 NPT	.50"	.75"	.65	.69	.80	1.56
3"	1/4 NPT	.50"	.75"	.65	.69	.80	1.56
4"	1/4 NPT	.50"	1.00"	.65	.69	.80	1.56

Nonrotating Double Rod Option -NRDR

A combination of the Options -NR and -DR as shown above. The rod end rod is Hex and the cap end rod is round. The ported baffles

are included and the "Dimension B" adjustments shown for Option -NR must be made. Extend piston areas must also be reduced by the rod area.

High Flow Vents Option -HF

The atmospheric vent in the baffle is cut larger to provide less resistance to the air flow.

Use when higher cycle speeds are required.

Viton Seals Option -V

Use for elevated temperatures (-15° to $+400^\circ\text{F}$) or compatibility with exotic media.

Consult engineering for compatibility information.

Magnetic Piston

Option -E

(Order Sensors and Sensor Clamps Separately)

2-Piece Sensor Clamp shown with quick disconnect sensor snapped in place

Quick Disconnect Sensor Shown

Socket Head Screw

WARNING

This cylinder is equipped with a Magnetic Piston for use with Magnetically Operated Sensors. Other Magnetic Sensitive Devices Should be Kept at a Distance to Avoid Inadvertent Operation.

9 foot prewired sensor

Female Cordsets available in 1, 2, & 5 meter lengths

- **Option -E** consists of a magnet bonded into the piston head. When the piston magnet moves past an external sensor, the magnetic field activates the sensor without physical contact.
- **Mounting** – The sensor snaps into a 2-part clamp that attaches rigidly to any of the tie rods and can be positioned anywhere along the length of the cylinder.
- **Reliability** – The annular piston magnet is permanently bonded into a groove in the piston. It is a polarized permanent magnet of rubber bonded barium ferrite that is very stable and is not affected by shock. Under normal usage it will remain magnetized indefinitely.
- **Warning** – External magnetic fields and/or ferrous objects may affect the strength of the piston magnet therefore affecting sensor actuation and piston position indication. Warning labels (shown left) are affixed to the cylinder.
- **Please note there is an increase in base length of the cylinder to accomodate the magnet. Add 1.00" to Dimension 'B' on pages 5.24.**
