- 1. These specification sheets include materials protected under copyright of Sharp Corporation ("Sharp"). Please do not reproduce or cause anyone to reproduce them without Sharp's consent.
- 2. When using this product, please observe the absolute maximum ratings and the instructions for use outlined in these specification sheets, as well as the precautions mentioned below. Sharp assumes no responsibility for any damage resulting from use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets, and the precautions mentioned below.

(Precautions)

- (1) Please do verify the validity of this part after assembling it in customer's products, when customer wants to make catalogue and instruction manual based on the specification sheet of this part.
- (2) This product is designed for use in the following application areas;
  - · OA equipment Audio visual equipment · Home appliances
  - · Telecommunication equipment (Terminal) · Measuring equipment
  - · Tooling machines · Computers

If the use of the product in the above application areas is for equipment listed in paragraphs (3) or (4), please be sure to observe the precautions given in those respective paragraphs.

- (3) Appropriate measures, such as fail-safe design and redundant design considering the safety design of the overall system and equipment, should be taken to ensure reliability and safety when this product is used for equipment which demands high reliability and safety in function and precision, such as:
  - · Transportation control and safety equipment (aircraft, train, automobile etc.)
  - · Traffic signals · Gas leakage sensor breakers · Rescue and security equipment
  - · Other safety equipment
- (4) Please do not use this product for equipment which require extremely high reliability and safety in function and precision, such as;
  - · Space equipment · Telecommunication equipment (for trunk lines)
  - · Nuclear power control equipment Medical equipment
- (5) Please contact and consult with a Sharp sales representative if there are any questions regarding interpretation of the above four paragraphs.
- Please contact and consult with a Sharp sales representative for any questions about this product.

1. Application

This specification applies to the outline and characteristics of photocoupler Model No. PC123 (Lead-Free Type).

2. Outline

Refer to the attached sheet, page 6.

Ratings and characteristics

Refer to the attached sheet, page 7, 8.

Reliability

Refer to the attached sheet, page 9.

Outgoing inspection

Refer to the attached sheet, page 10.

6. Supplement

6.1 Isolation voltage shall be measured in the following method.

- (1) Short between anode and cathode on the primary side and between collector and emitter on the secondary side.
- (2) The dielectric withstanding tester with zero-cross circuit shall be used.
- (3) The wave form of applied voltage shall be a sine wave.

(It is recommended that the isolation voltage be measured in insulation oil.)

6.2 Packing specifications

Refer to the attached sheet, page 11, 12.

#### Precautions in performing isolation test

- (1) Partial discharge test methods shall be the ones according to the specifications of EN 60747-5-2.
- (2) Please don't carry out isolation test (V<sub>iso</sub>) over U<sub>IOTM</sub>.
  This product deteriorates isolation characteristics by partial discharge due to applying high voltage (ex. U<sub>IOTM</sub>).
  And there is possibility that partial discharge occurs in operating isolation voltage. (U<sub>IORM</sub>).
- 6.5 This Model is approved by UL. Approved Model No.: PC123

UL file No.: E64380

6.6 This Model is approved by CSA. Approved Model No.: PC123 CSA file No.: CA95323

6.7 This product is approved by BSI. (BS EN60065, BS EN60950)

Approved Model No.: PC123 Certificate No.: 7087/7409

- 6.8 This product is approved by SEMKO, DEMKO, NEMKO and FIMKO
- 6.9 This product is not designed against irradiation.

This product is assembled with electrical input and output.

This product incorporates non-coherent light emitting diode.

6.10 ODS materials

This product shall not contain the following materials.

Also, the following materials shall not be used in the production process for this product.

Materials for ODS : CFC<sub>S</sub>, Halon, Carbon tetrachloride, 1.1.1-Trichloroethane (Methyl chloroform)

## 6.2 Packing specification

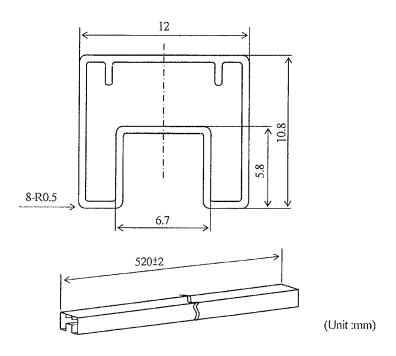

#### 6.2.1 Package materials

No.	Name	Materials	Purposes
(1)	Sleeve	HIPS or ABS with preventing static electricity	Products packaged
2	Stopper	Styrene-Elastomer	Products fixed
3	Packing case	Corrugated cardboard	Sleeve packaged
4	Kraft tape	Paper	Lid of packaged case fixed
⑤	Label	Paper	Model No., (Business dealing name), Lot No., Quantity, Country of origin, Company name and Inspection date specified

### 6.2.2 Package method

- (1) MAX. 100pcs. of products shall be packaged in a sleeve ① and both of sleeve edges shall be fixed by stoppers ②.
- (2) MAX. 20 sleeves (Product: 2000pcs.) above shall be packaged in a packing case ③.
- (3) The label ⑤ shall be put on the side of the packing case.
- (4) Case shall be closed with the lid and enclosed with kraft tape ①.

### 6.2.3 Sleeve package ① outline dimensions

Note 1) Thickness: 0.5±0.2mm

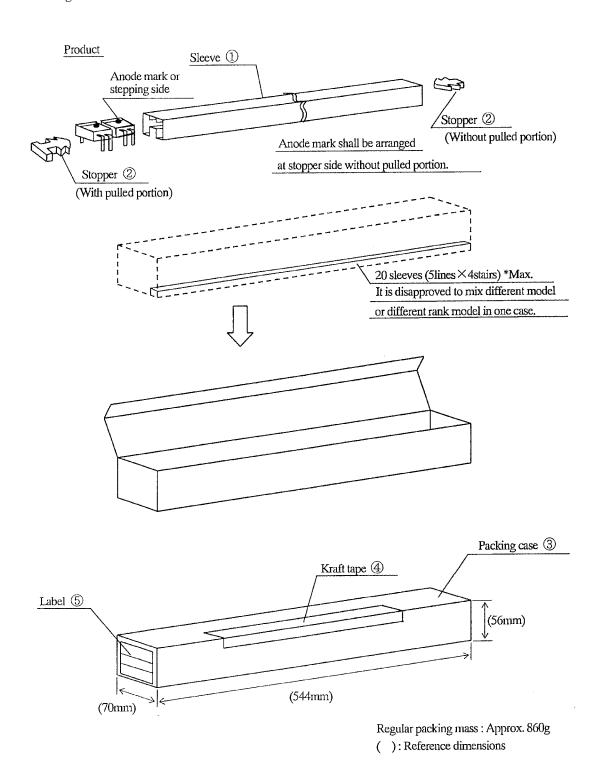

2) Process with applying antistatic agent.

3) Unless otherwise specified tolerances shall be ±0.5mm.

(However except for deformation due to the stopper in sleeve.)

#### Precautions for Photocouplers

1 Cleaning

(1) Solvent cleaning: Solvent temperature 45°C or less

Immersion for 3 min or less

(2) Ultrasonic cleaning: The effect to device by ultrasonic cleaning differs by cleaning bath size, ultrasonic power output,

cleaning time, PCB size or device mounting condition etc. Please test it in actual using condition

and confirm that any defect doesn't occur before starting the ultrasonic cleaning.

(3) Applicable solvent: Ethyl alcohol, Methyl alcohol, Isopropyl alcohol

When the other solvent is used, there are cases that the packaging resin is eroded.

Please use the other solvent after thorough confirmation is performed in actual using condition.

#### 2. Circuit design

2.1 The LED used in the Photocoupler generally decreases the light emission power by operation.

In case of long operation time, please design the circuit in consideration of the degradation of the light emission power of the LED. (50%/5years)

2.2 There are cases that the deviation of the CTR and the degradation of the relative light emission power of the LED in increase of the setting value of I<sub>F</sub> <1mA. Please design the circuit in consideration of this point.

### 3. Precautions for Soldering

(1) In the case of flow soldering (Whole dipping is possible)

It is recommended that flow soldering should be at 270°C or less for 10 s or less

(Pre-heating: 100 to  $150^{\circ}$ C, 30 to 80s). (2 times or less)

(2) In the case of hand soldering

What is done on the following condition is recommended. (2 times or less)

Soldering iron temperature: 400°C or less

Time: 3s or less

(3) Other precautions

Depending on equipment and soldering conditions (temperature, Using solder etc.),

the effect to the device and the PCB is different.

Please confirm that there is no problem on the actual use conditions in advance.
