SDHC Memory Card

**S-40 Series**  
SPI, SDHC compliant

# S-40 SERIES

## INDUSTRIAL SDHC MEMORY CARD – 4/8/16/32GBYTE

### Main Feature

- Fully compliant with SD Memory Card specification 2.0
  - SD mode and SPI mode supported
  - Target speed class value: class 6 according SD2.0 specification
  - FAT32 preformatted
- High performance 2.0 specification
  - SD burst up to 25MB/s
  - SD Normal speed 0...25MHz clock rate
  - SD High speed 25...50MHz clock rate
  - Flash burst up to 90MB/s
  - Up to 24MByte/sec sequential data rate
- Power Supply: (Low-power CMOS technology)
  - 2.7...3.6V normal operating voltage
  - 2.0...3.6V basic communication (CMD0, 15, 55 ACMD41) voltage
- Standard SD Memory card form factor
  - 32.0mm x 24.0mm x 2.1mm and Write Protect slider
- Optimized FW algorithms especially for high read access and long data retention applications
  - Patented power-off reliability technology
  - Wear Leveling technology  
Equal wear leveling of static and dynamic data. The wear leveling assures that dynamic data as well as static data is balanced evenly across the memory. With that the maximum write endurance of the device is guaranteed
  - Write Endurance technology  
Due to intelligent wear leveling an even use of the entire flash is guaranteed, regardless how much "static" (OS) data is stored.
  - Read Disturb Management  
The read commands are monitored and the content is refreshed when critical levels have occurred
  - Auto Refresh for Data Retention enhancement  
The interruptible background process maintain the user data for Read Disturb effects or Retention degradation due to high temperature effects
  - Near miss ECC technology  
Minimize the risk of uncorrectable bit failure over the product life time. Each read command analyzes the ECC margin level and refreshes data if necessary
  - Diagnostic features with Life Time Monitoring tool support
- High reliability
  - Designed for industrial market especially read intensive application like navigation, infotainment, POS/POI, Medical and general boot medium use case:
    - Longevity, long life cycle, high data retention together with high temperature profile
  - Intensive write application should use the S-400 series cards
  - Number of card insertions/removals 20,000
  - Extended Temperature range -25° up to 85°C (optional -40° up to 85°C)
  - SIP (System In Package) process for extreme dust, water and ESD proof
- Controlled BOM & PCN process
- Customized options like CID registers, CPRM keys, firmware incl. settings and marking by projects

# 1 Order Information

## 1.1 Standard product list

Table 1: Standard Product List

Density	Part Number	Temp. Range	Flash Technology
4GB	SFSD4096LgBM1TO-t-GE-1x1-STD	-25°C to 85°C or -40°C to 85°C	MLC NAND Flash
8GB	SFSD8192LgBM1TO-t-GE-1x1-STD		
16GB	SFSD016GLgBM1TO-t-LF-1x1-STD		
32GB	SFSD032GLgBM1TO-t-HG-1x1-STD		

g defines the product generation

x defines the FW

t defines the temperature range (E=-25°C to +85°C, I=-40°C to +85°C)

## 1.2 Current product generation

Table 2: Standard Product List

Density	Part Number	Temp. Range	Flash Technology
4GB	SFSD4096L1BM1TO-E-GE-111-STD	-25°C to 85°C	MLC NAND Flash
8GB	SFSD8192L1BM1TO-E-GE-111-STD		
16GB	SFSD016GL1BM1TO-E-LF-111-STD		
32GB	SFSD032GL1BM1TO-E-HG-111-STD		
4GB	SFSD4096L1BM1TO-I-GE-111-STD	-40°C to 85°C	
8GB	SFSD8192L1BM1TO-I-GE-111-STD		
16GB	SFSD016GL1BM1TO-I-LF-111-STD		
32GB	SFSD032GL1BM1TO-I-HG-111-STD

## 3 Product Specification

The SD Memory Card is a small form factor non-volatile memory card which provides high capacity data storage. Its aim is to capture, retain and transport data, audio and images, facilitating the transfer of all types of digital information between a large variety of digital systems.

The card operates in two basic modes:

- **SD/SDHC card mode**
- **SPI mode**

The SD Memory Card also supports **SD High Speed mode** with up to 50MHz clock frequency.

The cards are compliant with

- SD Memory card Specification Part 1, Physical layer Specification V2.0
- SD Memory card Specification Part 2, File System Specification V2.0
- SD Memory card Specification Part 3, Security Specification V2.0
- SD Memory Card Addendum V4.00

Simplified specifications are available at [https://www.sdcard.org/downloads/pls/simplified\\_specs/](https://www.sdcard.org/downloads/pls/simplified_specs/)

The Card has an internal **intelligent controller** which manages interface protocols, data storage and retrieval as well as hardware **BCH Error Correction Code (ECC)**, **defect handling**, **diagnostics** and **clock control**.

The **advanced wear leveling** mechanism assures an equal usage of the Flash memory cells to extend the life time.

The hardware BCH-code ECC allows to **detect and correct up to 40 defect bits per 1kByte**.

**The controller performs control read operations and checks the consistence of the data. If an error of some bits is detected, the card refreshes all data in the flash cells to prevent data retention problems.**

The card is optimized for applications

The card has a **power-loss management feature** to prevent data corruption after power-down.

The cards are RoHS compliant and lead-free.

### 3.1 System Performance

**Table 3: Performance**

System Performance		typ	max	Unit
Burst Data transfer Rate (max SD clock 50MHz)			25	MB/s
Sustained Sequential Read	4...8GB	22 <sup>(1)(2)</sup>	24 <sup>(1)(3)</sup>	
	16...32GB	22 <sup>(1)(2)</sup>	24 <sup>(1)(3)</sup>	
Sustained Sequential Write	4...8GB	11 <sup>(1)(2)</sup>	14 <sup>(1)(3)</sup>	
	16...32GB	11 <sup>(1)(2)</sup>	14 <sup>(1)(3)</sup>	

1. All values refer to Toshiba Flash 32/64Gb
2. Sustained Speed measured with USB-SD Memory Card reader. It depends on burst speed, flash number, and file size.
3. Maximum values were measured with Testmetrix tester.

## 3.2 Environmental Specifications

### 3.2.1 Recommended Operating Conditions

Table 4: SD Memory Card Recommended Operating Conditions

Parameter	min	typ	max	unit
Extended Operating Temperature	-25	25	85*)	°C
Industrial Operating Temperature	-40	25	85*)	°C

### 3.2.2 Recommended Storage Conditions

Table 5: SD Memory Card Recommended Storage Conditions

Parameter	min	typ	max	unit
Extended Storage Temperature	-25	25	100*)	°C
Industrial Operating Temperature	-40	25	100*)	°C

\*) high temperature storage without operation reduces the data retention, in operation the data will be refreshed, if data error issues were detected

### 3.2.3 Humidity & EMC

Table 6: Humidity & EMC

Parameter	Operating	Non Operating
Humidity (non-condensing)	operation: 95% RH @25°C storage: 93% RH @40°C, 500h	
ESD	<b>Non Contact Pads area:</b> ±15 kV (air discharge), according to IEC61000-4-2	<b>Contact Pads:</b> ±6 kV, according to IEC61000-4-2 <b>Non Contact Pads area:</b> ±8kV (indirect) contact discharge, according to IEC61000-4-2
	<b>Non Contact Pads area:</b> ±15 kV (air discharge) Human body model according to JESD22A114F	<b>Contact Pads:</b> ±6 kV, Human body model according to JESD22A114F <b>Non Contact Pads area:</b> ±8kV (indirect) contact discharge, according to JESD22A114F

### 3.2.4 Environmental Conditions

Table 7: Environmental Conditions

Parameter	Operating	Non Operating
UV light exposure	UV: 254nm, 15Ws/cm <sup>2</sup> according to ISO7816-1	
Durability	20,000 mating cycles	
Drop test	1.5m free fall	
Bending / Torque	10N / 0.10Nm ±2.5° max	
Mechanical Shock	1500G, 0,5ms, half sine wave ±xyz-axis, five pulses each Non operating, JESD22B110 Condition B	
Vibration	50G, 1.5mm p-p, 20..2000Hz, sweep xyz-axis, five pulses each, Non operating MIL-STD-883 M2007.3 Condition B	

## 3.3 Physical Dimensions

Table 8: Physical Dimensions

Outer Physical Dimensions	Value	Unit
Length	32.00±0.10	mm
Width	24.00±0.10	
Thickness	2.10±0.15	
Weight (typ.)	2	g

## 3.4 Reliability

Table 9: Reliability

Parameter	Value
Data Retention at beginning @ 40°C	10 years (JEDEC47G) *)
Data Retention at life end (2k PE cycles) @ 40°C	1 year *)

\*) After every power on the card reads the whole flash and performs a data refresh, if necessary. So the data retention can be much longer in most use cases.

## 4 Capacity specification

Table 10: SD Memory Card capacity specification

Capacity	Sectors	Total addressable capacity (Byte)
4GB	7'798'784 (TBD)	3'992'977'408 (TBD)
8GB	15'859'712 (TBD)	8'120'172'544 (TBD)
16GB	31'924'224 (TBD)	16'345'202'688 (TBD)
32GB	64'053'248 (TBD)	32'795'262'976 (TBD)

## 5 Card physical

### 5.1 Physical description

The SD Memory Card contains a single chip controller and Flash memory module(s). The controller interfaces with a host system allowing data to be written to and read from the Flash memory module(s). Figure 1 and Figure 2 show card dimensions.

Figure 1: Mechanical Dimensions SD Memory Card

## 6 Electrical interface

### 6.1 Electrical description

Figure 3: SD Memory Card Block Diagram

Figure 4: SD Memory Card Shape and Interface (Bottom View)

Table 11: SD Memory Card Pad Assignment

Pin #	SD Mode			SPI Mode		
	Name	Type <sup>1</sup>	Description	Name	Type <sup>1</sup>	Description
1	CD/DAT3 <sup>2</sup>	I/O/PP <sup>3</sup>	Card Detect/ Data Line [Bit 3]	CS	I <sup>3</sup>	Chip Select (neg true)
2	CMD	PP	Command/Response	DI	I	Data In
3	VSS1	S	Supply voltage ground	VSS	S	Supply voltage ground
4	VDD	S	Supply voltage	VDD	S	Supply voltage
5	CLK	I	Clock	SCLK	I	Clock
6	VSS2	S	Supply voltage ground	VSS2	S	Supply voltage ground
7	DAT0	I/O/PP	Data Line [Bit 0]	DO	O/PP	Data Out
8	DAT1 <sup>4</sup>	I/O/PP	Data Line [Bit 1]	RSV		
9	DAT2 <sup>5</sup>	I/O/PP	Data Line [Bit 2]	RSV		

Notes:

- 1) S: power supply; I: input; O: output using push-pull drivers; PP: I/O using push-pull drivers;
- 2) The extended DAT lines (DAT1–DAT3) are input on power up. They start to operate as DAT lines after SET\_BUS\_WIDTH command. The Host shall keep its own DAT1–DAT3 lines in input mode, as well, while they are not used.
- 3) At power up this line has a 50kOhm pull up enabled in the card. This resistor serves two functions Card detection and Mode Selection. For Mode Selection, the host can drive the line high or let it be pulled high to select SD mode. If the host wants to select SPI mode it should drive the line low. For Card detection, the host detects that the line is pulled high. This pull-up should be disconnected by the user, during regular data transfer, with SET\_CLR\_CARD\_DETECT (ACMD42) command
- 4) DAT1 line may be used as Interrupt Output (from the Card) in SDIO mode during all the times that it is not in use for data transfer operations (refer to "SDIO Card Specification" for further details).
- 5) DAT2 line may be used as Read Wait signal in SDIO mode (refer to "SDIO Card Specification" for further details).

## 6.2 DC characteristics

Measurements are at Recommended Operating Conditions unless otherwise specified.

**Table 12: DC Characteristics**

Symbol	Parameter	min	typ	max	unit	notes
	Peak Voltage on all Lines	-0.3		VDD+0.3	V	
3.3V interface						
VIL	Input LOW Voltage	-0.3		0.25*VDD	V	
VIH	Input HIGH Voltage	0.625*VDD		VDD+0.3	V	
VOL	Output LOW Voltage			0.125*VDD	V	@ 100μA
VOH	Output HIGH Voltage	0.75*VDD			V	@ 100μA
IDD	Operating Current Read		40	60	mA	@ 25°C
	Operating Current Write		60	80	mA	@ 25°C
	Background read and refresh *)		70	90	mA	@ 25°C
	Pre-initialization Standby Current		4600	6000	μA	@ 25°C
	Post-initialization Standby Current		2000	4000	μA	@ 25°C
			2500	5000	μA	@ 85°C
ILI	Input Leakage Current	-10		10	μA	without pull up R
ILO	Output Leakage Current	-10		10	μA	

\*) The card performs auto data read of the whole card to check for ECC errors and performs data refresh. Typical this operation starts 5 minutes after power on or if some large multiple bit errors were detected

**Table 13: SD Memory Card Recommended Operating Conditions**

Symbol	Parameter	min	typ	max	unit
VDD	Supply Voltage				
	Normal Operating Status	2.7		3.6	V
	Basic Communication (CMD0, CMD15, CMD55, ACMD41)	2.0	3.3	3.6	V
-	Power Up Time (from 0V to VDD min)			250	ms

## 6.3 Signal Loading

The total capacitance  $C_L$  is the sum of the bus master capacitance  $C_{HOST}$ , the bus capacitance  $C_{BUS}$ , and the capacitance  $C_{CARD}$  of the card connected to the line:

$$C_L = C_{HOST} + C_{BUS} + C_{CARD}$$

To allow the sum of the host and bus capacitances to be up to 20pF for the card, the following conditions in the table below are met by the card.

**Table 14: Signal loading**

Parameter	Symbol	Min	Max	Unit	Notes
Pull up resistance	$R_{CMD}$	10	100	kΩ	To prevent bus floating
Pull up resistance	$R_{DAT}$	10	100	kΩ	To prevent bus floating
Bus signal line capacitance	$C_L$		40	pF	Single card
Signal card capacitance	$C_{card}$		10	pF	Single card
Signal line inductance			16	nH	$f \leq 20\text{MHz}$

Figure 5: Signal Loading

## 6.4 AC characteristics

Table 15: AC Characteristics Low Speed Mode

Parameter	Symbol	Min	Max	Unit	Notes
Clock frequency in data transfer mode	fPP	0	25	MHz	CL≤100pF
Clock frequency in card id mode	fOD	0	400	KHz	CL≤250pF
Clock low time	tWL	10/50		ns	CL≤100/250pF
Clock high time	tWH	10/50		ns	
Clock rise time	tTLH		10/50	ns	
Clock fall time	tTHL		10/50	ns	
CMD, DAT input setup time	tISU	5		ns	CL≤25pF
CMD, DAT input hold time	tIH	5		ns	
CMD, DAT output delay time	tODLY	0	14	ns	CL≤25pF, data transfer
CMD, DAT output delay time	tODLY	0	50	ns	CL≤25pF, identification

### Notes

1. Rise and fall times are measured from 10% to 90% of voltage level.
2. CLK referenced to VIH min and VIL max.
3. CMD and DAT inputs and outputs referenced to CLK.
4. 0Hz means to stop the clock. The given minimum frequency range is for cases where a continuous clock is required
5. Specified for one card

Figure 6: AC Characteristics Low Speed Mode

Table 16: AC Characteristics High Speed Mode

Parameter	Symbol	Min	Max	Unit	Notes
Clock frequency in data transfer mode	fPP	0	50	MHz	CL≤10pF
Clock low time	tWL	7.0		ns	
Clock high time	tWH	7.0		ns	
Clock rise time	tTLH		3	ns	
Clock fall time	tTHL		3	ns	
CMD, DAT input setup time	tISU	6		ns	
CMD, DAT input hold time	tIH	2		ns	
CMD, DAT output delay time during data transfer mode	tODLY		14	ns	
CMD, DAT output hold time	tOH	2.5		ns	

#### Notes

1. Rise and fall times are measured from 10% to 90% of voltage level.
2. CLK referenced to VIH min and VIL max.
3. CMD and DAT inputs and outputs referenced to CLK.
4. In order to satisfy severe timing, the host shall drive only one card with max 40pF total at each line.

Figure 7: AC Characteristics High Speed Mode

## 7 Host access Specification

The following chapters summarize how the host accesses the card:

- Chapter 7.1 summarizes the SD and SPI buses.
- Chapter 7.2 summarizes the registers.

### 7.1 SD and SPI Bus Modes

The card supports SD and the SPI Bus modes. Application can chose either one of the modes. Mode selection is transparent to the host. The card automatically detects the mode of the reset command and will expect all further communication to be in the same communication mode. The SD mode uses a 4-bit high performance data transfer, and the SPI mode provides compatible interface to MMC host systems with little redesign, but with a lower performance.

#### 7.1.1 SD Bus Mode Protocol

The SD Bus mode has a single master (host) and multiple slaves (cards) synchronous topology. Clock, power, and ground signals are common to all cards. After power up, the SD Bus uses DAT0 only; after initialization, the host can change the cards' bus width from 1 bit (DAT0) to 4 bits (DAT0-DAT3). In high speed mode, only one card can be connected to the bus.

Communication over the SD bus is based on command and data bit streams which are initiated by a start bit and terminated by a stop bit.

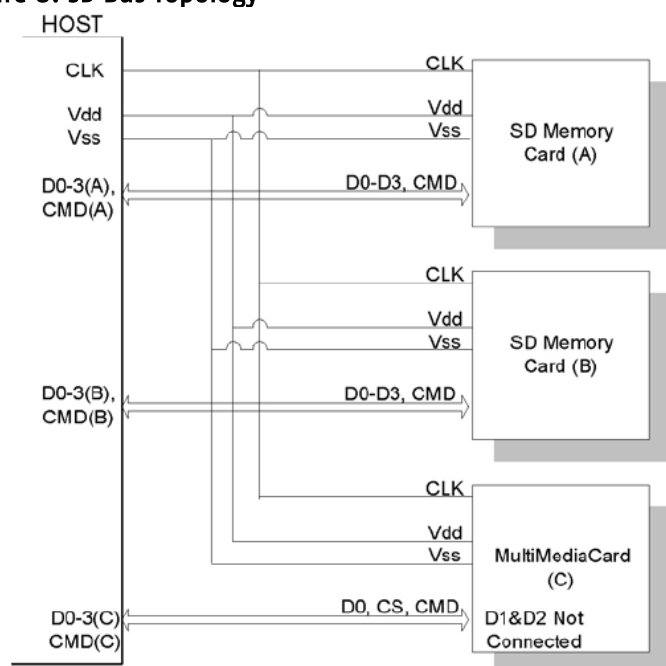

- **Command:** a command is a token which starts an operation. A command is sent from the host either to a single card (addressed command) or to all connected cards (broadcast command). A command is transferred serially on the CMD line.
- **Response:** a response is a token which is sent from an addressed card, or (synchronously) from all connected cards, to the host as an answer to a previously received command. A response is transferred serially on the CMD line.
- **Data:** data can be transferred from the card to the host or vice versa. Data is transferred via the data lines.

The SD bus signals are listed in Table 17, and the SD bus topology is illustrated in Figure 8: SD Bus Topology.

**Table 17: SD Bus Signals**

Signal	Description
CLK	Host to card clock signal
CMD	Bidirectional Command/Response signal
DAT0-DAT3	4 Bidirectional data signals
Vdd, Vss	Power and Ground

**Figure 8: SD Bus Topology**

### 7.1.2 SPI Bus Mode Protocol

The Serial Parallel Interface (SPI) Bus is a general purpose synchronous serial interface. The SPI mode consists of a secondary communication protocol. The interface is selected during the first reset command after power up (CMD0) and it cannot be changed once the card is powered on.

While the SD channel is based on command and data bit streams which are initiated by a start bit and terminated by a stop bit, the SPI channel is byte oriented. Every command or data block is built of 8-bit bytes and is byte aligned to the CS signal.

The card identification and addressing methods are replaced by a hardware Chip Select (CS) signal. There are no broadcast commands. For every command, a card (slave) is selected by asserting (active low) the CS signal. The CS signal must be continuously active for the duration of the SPI transaction (command, response and data). The only exception occurs during card programming, when the host can de-assert the CS signal without affecting the programming process.

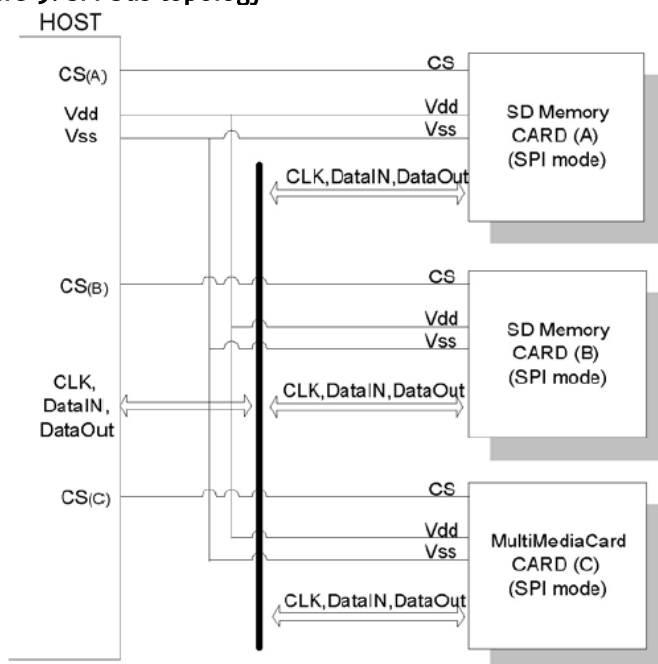

The bidirectional CMD and DAT lines are replaced by unidirectional *dataIn* and *dataOut* signals.

The SPI bus signals are listed Table 18 and the SPI bus topology is illustrated in Figure 9.

**Table 18: SPI Bus Signals**

Signal	Description
/CS	Host to card chip select
CLK	Host to card clock signal
Data In	Host to card data signal
Data Out	Card to host data signal
Vdd, Vss	Power and ground

**Figure 9: SPI bus topology**

### 7.1.3 Mode Selection

The SD Memory Card wakes up in the SD mode. It will enter SPI mode if the CS signal is asserted (negative) during the reception of the reset command (CMD0) and the card is in *idle\_state*. If the card recognizes that the SD mode is required it will not respond to the command and remain in the SD mode.

If SPI mode is required the card will switch to SPI and respond with the SPI mode R1 response.

The only way to return to the SD mode is by entering the power cycle. In SPI mode the SD Memory Card protocol state machine is not observed. All the SD Memory Card commands supported in SPI mode are always available. During the initialization sequence, if the host gets Illegal Command indication for ACMD41 sent to the card, it may assume that the card is Multimedia Card. In that case it should re-start the card as Multimedia Card using CMD0 and CMD1.

## 7.2 Card Registers

The SD Memory Card has registers. Refer to Table 19 to Table 25 for detail.

**Table 19: SD Memory Card registers**

Register Name	Bit Width	Description	Function
CID	128	Card Identification information	This register contains the card identification information used during the Card Identification phase.
OCR	32	Operation Conditions Registers	This register describes the operating voltage range and contains the status bit in the power supply.
CSD	128	Card specific information	This register provides information on how to access the card content. Some fields of this register are writeable by PROGRAM_CSD (CMD27).
SCR	64	SD Memory Card's Special features	This register provides information on special features.
RCA	16	Relative Card Address	This register carries the card address is SD Card mode.
SSR	512	SD Status	information about the card proprietary features and vendor specific life time information

**Table 20: CID register**

Register Name	Bit Width	Description	typ. value
MID	8	Manufacture ID	TBD (0x5d)
OID	16	OEM/Application ID	TBD (0x5342)
PNM	40	Product Name	TBD ("LgBMc") g=generation c=number of channels
PRV	8	Product Revision	0xgg
PSN	32	Product Serial Number	xxxxxxxx
—	4	Reserved	0x0
MDT	12	Manufacture Date	oxyym
CRC	7	Check sum of CID contents	chksum
—	1	Not used; always=1	1

**Table 21: OCR register**

OCR bit position	VDD voltage window	typ. value	OCR bit position	VDD voltage window	typ. value
0-3	Reserved	0	15	2.7-2.8	1
4	1.6-1.7	0	16	2.8-2.9	1
5	1.7-1.8	0	17	2.9-3.0	1
6	1.8-1.9	0	18	3.0-3.1	1

## 8 Declaration of Conformity

We

**Manufacturer:** Swissbit AG  
Industriestrasse 4  
CH-9552 Bronschhofen  
Switzerland

declare under our sole responsibility that the product

**Product Type:** SD Memory Card  
**Brand Name:** SWISSMEMORY™  
**Product Series:** S-40  
**Part Number:** SFSDxxxxLxBMxxx-X-xx-xxx-xxx

to which this declaration relates is in conformity with the following directives:

EN55022:2010  
FCC47 Part 15 Subpart B §15.111  
EN 61000-6-2:2005  
EN 61000-4-2:2008  
EN 61000-4-3:2010  
2012/19/EU Category 3 (WEEE)

following the provisions of Directive

Electromagnetic compatibility 2004/108/EC  
Restriction of the use of certain hazardous substances 2011/65/EU

Swissbit AG, October 2013

Manuela Kögel  
Head of Quality Management

## 9 RoHS and WEEE update from Swissbit

Dear Valued Customer,

We at Swissbit place great value on the environment and thus pay close attention to the diverse aspects of manufacturing environmentally and health friendly products. The European Parliament and the Council of the European Union have published two Directives defining a European standard for environmental protection. This states that CompactFlash Cards must comply with both Directives in order for them to be sold on the European market:

- **RoHS** – Restriction of Hazardous Substances
- **WEEE** – Waste Electrical and Electronic Equipment

Swissbit would like to take this opportunity to inform our customers about the measures we have implemented to adapt all our products to the European norms.

### What is the WEEE Directive (2002/96/EC)?

The Directive covers the following points:

- Prevention of WEEE
- Recovery, recycling and other measures leading to a minimization of wastage of electronic and electrical equipment
- Improvement in the quality of environmental performance of all operators involved in the EEE life cycle, as well as measures to incorporate those involved at the EEE waste disposal points

### What are the key elements?

The WEEE Directive covers the following responsibilities on the part of producers:

Producers must draft a disposal or recovery scheme to dispose of EEE correctly.  
Producers must be registered as producers in the country in which they distribute the goods.  
They must also supply and publish information about the EEE categories.  
Producers are obliged to finance the collection, treatment and disposal of WEEE.

### Inclusion of WEEE logos on devices

In reference to the Directive, the WEEE logo must be printed directly on all devices that have sufficient space. «In exceptional cases where this is necessary because of the size of the product, the symbol of the WEEE Directive shall be printed on the packaging, on the instructions of use and on the warranty»  
(WEEE Directive 2002/96/EC)

### When does the WEEE Directive take effect?

The Directive came into effect internationally on 13 August, 2005.

### What is RoHS (2002/95/EC)?

The goals of the Directive are to:

- Place less of a burden on human health and to protect the environment by restricting the use of hazardous substances in new electrical and electronic devices
- To support the WEEE Directive (see above)

**RoHS enforces the restriction of the following 6 hazardous substances in electronic and electrical devices:**

- Lead (Pb) – no more than 0.1% by weight in homogeneous materials
- Mercury (Hg) – no more than 0.1% by weight in homogeneous materials
- Cadmium (Cd) – no more than 0.01% by weight in homogeneous materials
- Chromium (Cr6+) – no more than 0.1% by weight in homogeneous materials
- PBB, PBDE – no more than 0.1% by weight in homogeneous materials

### **Swissbit is obliged to minimize the hazardous substances in the products.**

According to part of the Directive, manufacturers are obliged to make a self-declaration for all devices with RoHS. Swissbit carried out intensive tests to comply with the self-declaration. We have also already taken steps to have the analyses of the individual components guaranteed by third-party companies.

Swissbit carried out the following steps during the year with the goal of offering our customers products that are fully compliant with the RoHS Directive.

- **Preparing all far-reaching directives, logistical enhancements and alternatives regarding the full understanding and introduction of the RoHS Directive's standards**
- **Checking the components and raw materials:**
  - Replacing non-RoHS-compliant components and raw materials in the supply chain
  - Cooperating closely with suppliers regarding the certification of all components and raw materials used by Swissbit
- **Modifying the manufacturing processes and procedures**
  - Successfully adapting and optimizing the new management-free integration process in the supply chain
  - Updating existing production procedures and introducing the new procedures to support the integration process and the sorting of materials
- **Carrying out the quality process**
  - Performing detailed function and safety tests to ensure the continuous high quality of the Swissbit product line

### **When does the RoHS Directive take effect?**

As of 1 July, 2006, only new electrical and electronic devices with approved quantities of RoHS will be put on the market.

### **When will Swissbit be offering RoHS-approved products?**

Swissbit's RoHS-approved products are available now. Please contact your Swissbit contact person to find out more about exchanging your existing products for RoHS-compliant devices.

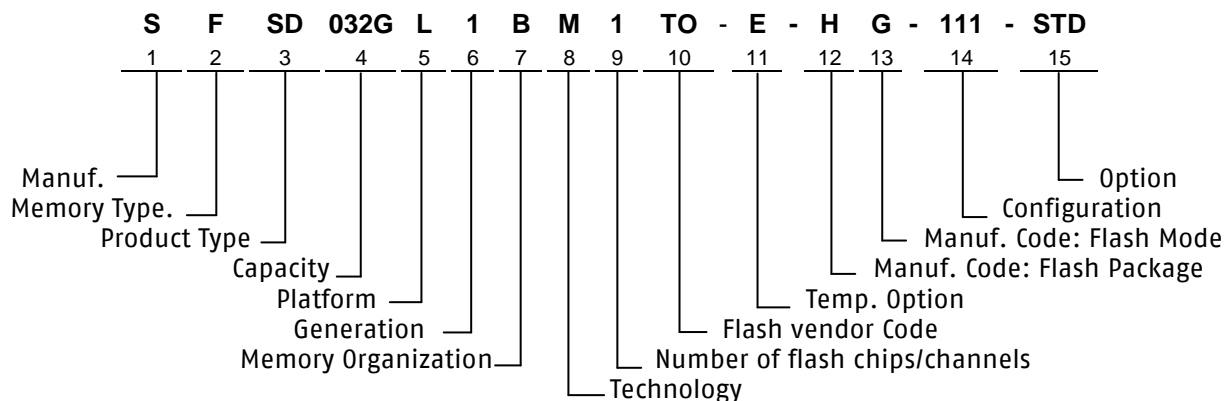

### **For your attention**

We understand that packaging and accessories are not EEE material and are therefore not subject to the WEEE or RoHS Directives.
