Description

The SM6TY Transil series has been designed to protect sensitive automotive circuits against surges defined in ISO 7637-2 and against electrostatic discharges according to ISO 10605.

The planar technology makes this device compatible with high-end circuits where low leakage current and high junction temperature are required to provide reliability and stability over time. SM6TY are packaged in SMB (SMB footprint in accordance with IPC 7531 standard).

1. Pulse test: $t_p < 50\text{ ms}$

2. To calculate maximum clamping voltage at another surge level, use the following formula:

$$V_{CLmax} = V_{CL} - R_D \times (I_{PP} - I_{PPappli}) \text{ where } I_{PPappli} \text{ is the surge current in the application.}$$

3. To calculate V_{BR} or V_{CL} versus junction temperature, use the following formulas:

$$V_{BR} @ T_J = V_{BR} @ 25^{\circ}\text{C} \times (1 + \alpha T \times (T_J - 25))$$

$$V_{CL} @ T_J = V_{CL} @ 25^{\circ}\text{C} \times (1 + \alpha T \times (T_J - 25))$$
