

Joystick Switches

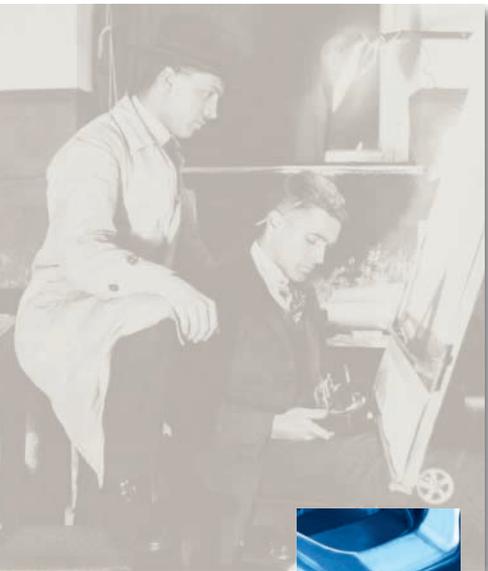

More than safety.

EUCHNER

More than safety.

Emil Euchner, the company's founder and inventor of the multiple limit switch, circa 1928.

Around the world – the Swabian specialists in motion sequence control for mechanical and systems engineering.

EUCHNER's history began in 1940 with the establishment of an engineering office by Emil Euchner. Since that time, EUCHNER has been involved in the design and development of switchgear for controlling a wide variety of motion sequences in mechanical and systems engineering. In 1953, Emil Euchner founded EUCHNER + Co., a milestone in the company's history. In 1952, he developed the first multiple limit switch – to this day a symbol of the enterprising spirit of this family-owned company.

Automation – Safety – ManMachine

Today, our products range from electromechanical and electronic components to complex system solutions. With this wide range of products we can provide the necessary technologies to offer the right solution for special requirements – regardless of whether these relate to reliable and precise positioning or to components and systems for safety engineering in the automation sector.

EUCHNER products are sold through a world-wide sales network of competent partners. With our closeness to the customer and the guarantee of reliable solutions throughout the globe, we enjoy the confidence of customers all over the world.

Quality, reliability, precision

Quality, reliability and precision are the hallmarks of our corporate philosophy. They represent concepts and values to which we feel totally committed.

At EUCHNER, quality means that all our employees take personal responsibility for the company as a whole and, in particular, for their own field of work. This individual commitment to perfection results in products which are ideally tailored to the customers' needs and the requirements of the market. After all: our customers and their needs are the focus of all our efforts. Through efficient and effective use of resources, the promotion of personal initiative and courage in finding unusual solutions to the benefit of our customers, we ensure a high level of customer satisfaction. We familiarize ourselves with their needs, requirements and products and we learn from the experiences of our customers' own customers.

EUCHNER – More than safety.

Quality – made by EUCHNER

Universal Power Supply Unit P1/P2 for series KP joysticks		22
Housing HBL		23
Housing HBE		24
Front plates for housing HBL and HBE		25

Application

Joystick switches or joysticks are manually actuated control devices for installation in control and front panels as well as in portable control equipment. They are used wherever motion sequences analogous to the actuation direction are controlled by hand. They are ideal for raising, lowering and triggering movements to the right and left, just to name some few possibilities.

EUCHNER joysticks are used in the steel and construction industry, in machine tools, for transport and conveyor systems, in the system and mechanical engineering sectors and for warehousing, medical and studio technology. With the ® (Germanischer Lloyd) certification, the devices are approved for use in the ship-building industry.

EUCHNER joysticks are also used for radio and cable controls, building machinery and cranes.

Joysticks as control equipment in remote control devices

Remote cable control for concrete pumps

Design and function

Microswitches with a step function response are used as switching elements. Due to the intermittent control, a clear switching function is given for precise control systems. Depending on the respective application, switching elements with a power rating of between 4mA and 16A can be used. These are fixed on the mounting plate for each different series, either individually or in groups. The switching elements are actuated by the joystick being moved out of the intermediate position. The robust levers made of stainless steel are bedded with a hinged ball bearing that is fixed in a front plate.

Advantages/features

Direction of movement:

- ▶ Simplification of the command control station
- ▶ Easy mounting due to the slots in the panel
- ▶ Small space requirement
- ▶ Long service life
- ▶ Robust and lasting construction
- ▶ High protection class: IP 65 and beyond

Models

EUCHNER joystick switches are available in a number of different models:

Universal Power Supply Unit P1/P2 Order No. 096 645

suitable for DIN rail according to DIN EN 50022-35

Connection to power supply

with AC 115 V or AC 230 V

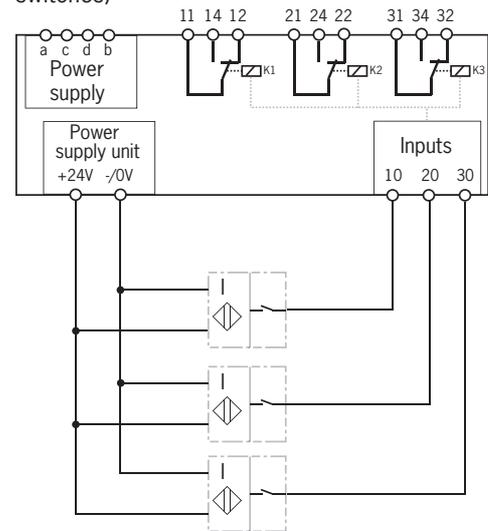

The universal power supply unit P1/P2 comprises the unit P1UG4A018 (P1) for the supply of the EUCHNER series KP joystick.

The unit P2RV3A24P (P2) is used as a switch amplifier for the connection of three inductive proximity switches or single hole fixing limit switches. In addition, it can also be used as a simple power supply. The units can be operated separately or together.

Use as switch amplifier

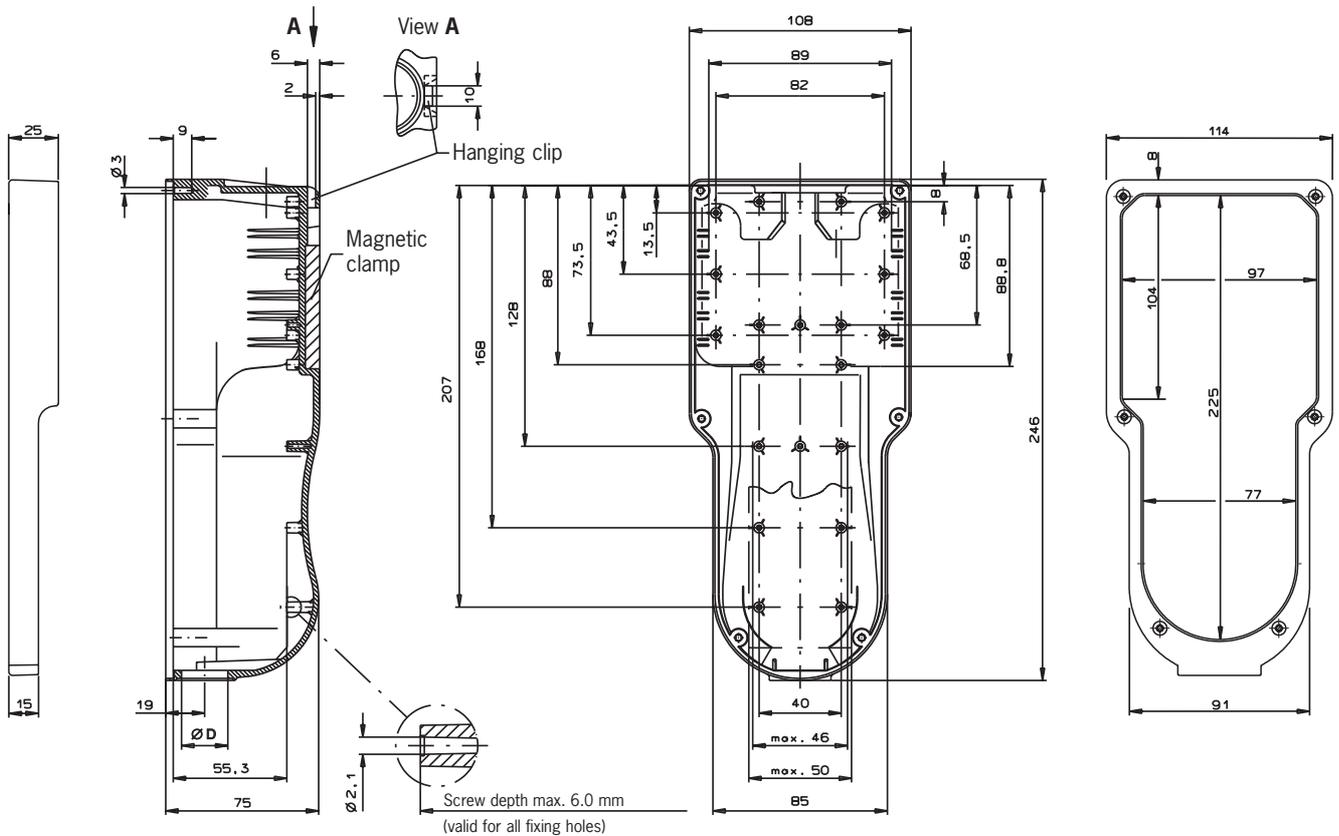

(connection example with inductive proximity switches)

Parameter	Value	Unit
